>
The thread is a bit ambiguous.  I think AM radio can be harmful if talk
show hosts thereon are dividing peoples.

09-07-2004
### SIRIUS PASSES 600,000 SUBSCRIBERS
Sirius Satellite Radio says it passed the 600,000 subscriber mark over the Labor Day weekend and expects to reach 1 million paying customers by year-end.
http://www.rwonline.com/dailynews/one.php?id=5775

09-03-2004
### COURT UPHOLDS NEW RADIO MARKET DEFINITION
The Philadelphia Appeals Court is allowing the FCC to go ahead with its plan to change the radio market definition to Arbitron Radio Metros - one of several ownership rules passed by the commission but stayed pending appeals by several broadcast groups and citizen's groups.
http://www.rwonline.com/dailynews/one.php?id=5767

BUSINESS
=========

09-09-2004
### BBC MAY SELL OFF WORLDWIDE DIVISION, INCLUDING BBC AMERICA
The Financial Times reports that the BBC has invited big names - Time Warner, Bertelsmann and Walt Disney - to discuss possible bids for BBC Worldwide, its commercial sales and publishing arm.
http://www.rwonline.com/dailynews/one.php?id=5792

=============== FEATURED SPONSOR ===============

Broadcast Electronics

Total Radio. Guaranteed.

Why have hundreds of broadcasters attended Broadcast Electronics HD Radio(TM) Seminars across the country? To learn from the experts about HD Radio issues such as audio routing, changing modes on-the-fly, spectral measurements, RF installations, as well as the

consequences of next generation HD Radio technologies on system architecture, data delivery and STL requirements.

Our next seminar coinciding with the NAB Radio Show, will be on Wednesday, October 6, from 1:00 until 3:00pm at the Embassy Suites Downtown Hotel in San Diego.

For information:
http://www.bdcast.com/HDRadio/index.html

The seminar is free, but reservations are required. To reserve your place, e-mail HDR@bdcast.com. Not attending the show? Send us a message and we'll follow up with a summary.

At NAB Radio Booth 702, BE will be showing our solutions for Total Radio Program and Data Integration, to take full advantage of your analog, HD Radio and Internet program channels, along with their associated data services to increase listenership and revenue.

For sale:

The "Radio Crazy" is baaaaaakkkkk!!! Hi Hi!
```

Partial interest in AM daytimer in small Alabama city.

This is a joint venture. There is an element of risk
and you could lose all or part of your investment. You
heard if first here, kiddies!!

Active or inactive investors with $5,000 min. each are
welcome. All investors would be on the board with full
voting rights if desired.

No investor may hold over 49 percent. This means me
too!

Total consideration for the station is $60,000 asking
price. It is a 1 KW daytimer, non-directional. NO real
estate is included.

Almost 120,000 people live in the "primary" (0.5
mv/meter)contour.

Tel: (478)741-1710 in Macon,GA.

73,

Meyer Gottesman, W6GIV
aka "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman.

CKLW's IDs certainly were the best of their time, Lee.  Ken R in Toledo has all of the CK jingles on a CD....well worth the price, I might add.

Also among my fave IDs were those on WHYT/Detroit during its Hot Hits heyday and the Hitradio incarnation, and WCZY 95.5 FM's IDs when Gannett owned it.

They just don't make catchy IDs like those anymore.  Kinda sad, but that's the way our biz is now.

Amateur Radio Newsline™ Report 1413 – September 10, 2004

Amateur Radio Newsline report number 1413 with a release date of
Friday, September 10th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hurricane Frances strikes Florida and ham radio is prepared. Hear the ham radio first responders in action on Amateur Radio Newsline report number 1413 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HURRICANE FRANCES VS. HAM RADIO

Hurricane Frances pounded Florida with high wind and heavy rain after it smashed across the state's East coast. Close to 4 million residents lost power and telephone service. Cellular phone networks that survived Frances’s gale force winds quickly became overloaded. Enter ham radio. Amateur Radio Newsline’s David Black, KB4KCH has been following the story from our South-East bureau in Birmingham, Alabama:

--

When Hurricane Frances hit Florida on Labor Day weekend, the storm ripped roofs off buildings, toppled trees and cut power to about 4 million people. Also lost was part of the states telephone and cellular service. This created a communications vacuum.

But hams affiliated with SATERN - the Salvation Army Team Emergency Radio Network, A-R-E-S, and the Hurricane Watch Net were expecting Frances. Radio amateurs had been tracking this storm as it ravaged its way across the Caribbean. And it was ham radio that let the world know of the destruction the giant storm had caused as it hit some of the islands:

--

“Roger roger. On Elutheria Ill say about 40 percent of the structures have damage. In the Rainbow Bay area where I live I would say about 70% of the hhomes here have structural damage. Over.”

--

Once a Category 4 hurricane with winds of 145 mph, Frances had weakened to a Category 2 storm as it neared Florida. Winds dropped to a peak of 105 mph as it made landfall at Sewall's Point, north of Palm Beach, around 1 a.m. Eastern Daylight Time on Saturday, September 4th. Ham radio operators affiliated with the Hurricane Watch Net tracked its approach:

--

“This is KA5E with the Hurricane Watch Net. We are currently taking measured weather reports out of the affected area for Hurricane Frances. Do I have any stations on with pdates or signifigant weather reports. KA5E, over.”

--

The powerful storm hit Florida with ferocious winds and sheets of rain. The hurricane was so large and slow moving that its western outer edges had began arriving on the east coast on Saturday morning. On Sunday morning its eastern edges were still pounding the coast from which 2.5 million people had been told to flee. Repeaters interconnected using I-R-L-P and Echolnk were pressed into service to help coordinate the latest round of evacuations:

--

“KC4PNC KB1CYO net control. Go ahead sir,”

“They have called for mandatory evacuation for Hillsboro county for manufactured homes and also mobile homes. They have not ordered a mandatory for low lieing areas but they are strongly recommendng it.”

--

And as evacuee’s poured into shelters, communications volunteers were needed. A call was put out over the interlinked repeater network and the hams responded

--

“We are looking for any volunteerr Amateur Radio operators to help with shelters. We have eight shelters open right now. Those are being manned. However, since its a declared evacuation all of the other shelters will be opened and we are looking for vlunteers to man those shelters. KC4PNC.”

--

As Frances path of destruction hit Florida's central Atlantic coast counties, blinding rain squalls drove clouds of sand into the air. At the same time high waves thundered onto the beaches. One ham watched as his rain gage was torn away and white caps pounded ashore:

--

“Any kind of rainfall accumulation?”

“No, that gage blew away but I can tell you that we are in a high tide area right now and I can see the tides up about a foot and a half and I have water coming over my seawall. But its not a problem. We are still at a much higher elevation. The water is over the seawall along the Intercoastal Waterway.”

--

As palm trees rained coconuts and then toppled over and buildings suffered extensive damage there was also a tragedy at sea.  And the U-S Coast Guard turned to Amateur Radio for help:

--

“I want to remind the net that the Coast Guard has asked us to lend assistance in the search for the Anna Marie.  It is a vessel that went down off the coast of Sarasota this evening about 10 to 12 miles out.  Any assistance or any information on the Anna Marie that went down with the crew 10 o 12 miles out of Sarasota, the U.S. Coast Guard would appreciate your assistance.”

--

At airtime its not known what happened to the Anna Marie nor the fate of its crew.  But as the search continued, there was yet another threat.  Early on Sunday the 5th, the massive weather system  spawned  a tornado, and the warning went out over the I-R-L-P ham radio network:

--

“The tornado is expected to be by Bostwick by by 2:45 Eastern, Forholm by 3:00 a.m.  and thats all I have.”

--

As that twister touching down the National Weather Service office in Jacksonville issued a tornado warning for Northern Clay County including the city of Orange Park.  Also affected were St. Johns, Clay, and Putnam Counties.  And as dawn was breaking radar picked up a developing tornado near Doctors Inlet moving West at 45 mph.  Only some damage to roofs was reported.

But reporting weather was not the only chore radio amateurs were involved in.  Another as health and welfare.  Letting worried relatives and friends know about those stuck in Frances path.  Many like this central American station who was happy to hear that the hurricane was headed away from his daughters location:

--

“OK.  Great. Thank you very much.  I appreciate that information.  We are here in a location where we do not have any TV or any other communication.  We are on the beach on the West coast of Panama.  So thanks very much I do appreciate it.  This is HB1XRO and the handle is Bob.”

--

By Monday afternoon, Frances had crossed the eastern Gulf of Mexico and made its second landfall in Florida's northwest Panhandle section some 20 miles south of Tallahassee.  Now it only a tropical storm with sustained wind near 65 mph. Damage was mainly to power and telephone lines. At that point the forecasters were predicting the storm would move north-northwest at about 8 mph, and was not expected to regain hurricane strength.

Frances soaked Georgia, dumping 11 inches of rain in a 24 hour period in the town of Patterson.

Media reports blame Frances for at least seven deaths in Florida, including two people who were killed Saturday when the roof of he building they were in collapsed. There were also two deaths in the Bahamas. One of these was a teenager who was reportedly electrocuted when he tried to hook up a generator to a power mains that was still on.

With thanks to the hams who supplied the storm audio over the Internet used in this report, I’m David Black, KB4KCH at the South-East bureau in Birminham Alabama for the Amateur Radio Newsline. (ARNewsline(tm))

--

RESCUE RADIO: HAM RADIO PREPARES FOR IVAN

And its not over yet. As we go to air Hurricane Ivan is making its way cross the Caribbean and could strike the United States. CQ's newsdesk reports that Amateur Radio at the National Hurricane Center, WX4NHC, was to be reactivated for Hurricane Ivan at 2 PM EDT Thursday, Sept. 9, and will be active on Friday-Sunday 8 AM-11 PM EDT. The Hurricane Center will be on the Hurricane Watch Net on 20 meters as well as the VoIP Hurricane Net,. The latter is a combination of IRLP and Echolink stations.

The Cayman Islands and Jamaica are the next locations in the path of this extremely dangerous Category V Hurricane which now has maximum sustained winds of 160 MPH per the latest advisory issued at 5 AM EDT Thursday morning.

VoIP Net Control Station Rob Macedo, KD1CY, says they are trying to coordinate with the IRLP node owners on the Cayman Islands and Jamaica on usage of their nodes and liaisons to those affected areas. Currently there are no Echolink or IRLP nodes in Cuba.

National Hurricane Center advisories indicate that the path of Hurricane Ivan is not clear after it passes over Cuba on Sunday. Residents in the affected area should monitor the situation closely. There is a possibility that the hurricane's forward progress could slow and emergency nets may be activated for an extended period of time. It also means that ham radio communications volunteers could have a lot more to do in the coming days. (CQ)

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the repeaters of the Condor Connection intertie serving the great American South-West.

(5 sec pause here)

**

RESCUE RADIO:  FIRST RESPONDERS SAY THEY NEED INTEROPERABILITY

Meantime, three years after the nine eleven terrorist attacks, thousands of police and fire divisions in cities and counties across the United States still do not have coordinated communications capabilities.  So says the First Response Coalition and Amateur Radio Newslines Norm Seeley, KI7UP, has the details:

--

The First Response Coalition calls this lack of interoperability an unresolved national crisis and it has decided to take on the FCC and big business to solve it.  This as the organization reaches out directly to more than 43,000 local police and fire officials to solicit their help.

First Response wants Congress to overturn the FCC decision to award spectrum to Nextel in favor of a plan that deals both with interference problem and the interoperability crisis.  Gene Stilp, who is the First Response Coalition coordinator says that the FCC plan involving Nextel is wrong for police officers and firefighters.  This is because it only takes on only part of the interference issue.  Moreover, it does not do anything about the lack of interoperability between emergency response groups.

The First Response Coalition says that this outreach program is getting a very favorable grassroots response.  So far over 17 fire chiefs have joined ranks with the group in opposing the FCC's current plan for what they call a give away of taxpayer-owned spectrum.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

About the only emergency responders these days who have full two way radio interoperability are radio amateurs. Hams had voluntarily set world-wide communications standards many years ago.  (First Response Coalition release)

**

RESCUE RADIO:  AMBER ALERT LINKS UP TO THE WEB

The nation's Amber Alert system has become a web available tool.  This, thanks to a portal made available by the E2C company of Scottsdale, Arizona.

Until now, Amber Alerts have been a primarily radio based technology. This meant that messages had depended on the nation's Emergency Alert system for relay and delivery. The new Web-based system can process and transmit the same emergency information more quickly and make it available to a wider variety of devices. It also comes with software that pinpoints the location of a child abduction and sends out emergency notification targeted to that geographic area.

As of now, Amber Alert managers in 11 states have access to the new portal. Use of the system is expected to expand to the 49 states that have statewide Amber Alert systems. Hawaii has no statewide system but has several local alert networks. (E2C)

**

THE BPL FIGHT: VK 4-WHEELERS JOIN BPL FIGHT

A Four Wheel Drive hobby group has joined the fight against BPL. Its happening down-under. WIA Newscaster Phil Waite ,VK2DKN, reports:

--

The VKS737 4WD HF Radio Network, joined the fight against BPL last week, following the recent WIA news broadcast by Jim Linton, VK3PC, highlighting the BPL industry's attack on interference protection for so called `recreational radio services' and an approach from WIA Director, Glen Dunstan, VK4DU.

VKS737 are currently circulating their members with information about the threat BPL poses to their activities, and encouraging their members to lobby politicians on the issue.

The VKS737 network is used extensively for emergency communications in remote areas, as well as serving the communications needs of outback travellers. Their current membership is around 7,000 and they potentially reach 250,000 Australian 4WD owners.

Many of their network base stations are in urban areas potentially affected by BPL and VKS737 members are rightly concerned about the threat presented to their HF communications. Their organisation is also associated with the Australian Citizens Emergency Radio network, who provide similar services on citizens band frequencies.

Phil Waite, VK2DKN, for the WIA National News.

--

The Wireless Institute of Australia is discussing ways the two organizations can assist each other in the fight against BPL. (WIA News)

**

## INTRUDER WATCH:  STRANGE SIGNALS AT 7238 KHZ

According to Bob Gonsett, W6VR, for the past three weeks, hams in the southwestern U.S. have been reporting a mysterious signal in the 40-meter band. One party described it as a "mechanical sound."  Another speculated that it was "data."

Engineers at Communications General Corporation in Fallbrook California took a quick look at the situation on Septeember 6th.  And at 3:20 P-M Pacific Daylight Savings Time the company found several close-spaced CW carriers. The four strongest signals at CGC's lab were on 7238.063, 7238.150, 7238.237 and 7238.412 kHz.  The signal on  .237 was the strongest of the group and the frequencies reported should each be accurate to better than plus or minus 30 Hz.

Communications General says it is not sure if the signal was coming from one specially modulated transmitter or from transmitters at different locations. Bob Gonsett adds that it will be interesting to learn the source or sources of these transmissions.  (W6VR, CGC)

**

## SAFETY:  RADIO ENGINEER ELECTROCUTED WHILE WORKING ALONE AT TOWER SITE

The hazards of working near power lines has been brought front and center again.  This with word that a Wyoming broadcast engineer has killed while working at a transmitter site in Colorado.

Thirty nine year old Robin Bradley Thomas was killed while working alone, trying to install a radio transmitter.  The accident happened about 18 miles northwest of Red Feather Lakes in northern Colorado.  Indications are that Thomas of Cheyenne died when he accidentally came in contact with high-voltage and was electrocuted.  Thomas was described as an experienced engineer who contracted out his services.  (CGC)

**

## RADIO LAW:  CELLPHONE PROVIDERS SUED OVER LOCKED PHONES

A consumer watchdog group sued three cellular telephone companies.  This.  for "locking" their phones to make it harder for customers to switch carriers.

The Foundation for Taxpayer and Consumer Rights is the group that filed the suit in Los Angeles.  It accuses AT&T Wireless Services Inc., T-Mobile USA Inc. and Cingular Wireless, of using software in their handsets that prevents them from being used on a competitors' network.

All phones in question use Global System Mobile communications, or GSM technology which effectively limits a handset to a specific carrier using a non interchangeable SIM card.  The lawsuit complains that this is an unfair and deceptive business practice under California state law.

The phone companies are defending their policy.  They say that they routinely subsidize handset cost and would loose substantial revenue if they allowed customers to easily use those phones with another carrier. (Foundation for Taxpayer and Consumer Rights)

**

## REPEATER COORDINATION: METROCOR MORITORIUM TO END DECEMBER 15

Attention repeater owners in the New York metro and surrounding area. An impoerant deadline is aproaching.

You may remember that your new area frequency coordinator MetroCor had put in place a two year moritorium on new co-channel coordinations when the group came into being. It had also asked existing repeater operators who have documented proof of expired coordination from the now defunct Tri State Amateur Repeater Council to update their coordinations with MetroCor.

In a posting to QRZ.com, MetroCor's Mario Sellitti, N2PVP, says that this moratorium had minimized the possibility that new coordinations might inadvertently displace longstanding users of the spectrum. It also helped to avoid creating disputes where none previously existed.

Now, says Sellitti, this period must now come to an end. He says that MetroCor will be terminating the moratorium as of midnight, Saturday, December 15th.

But he adds this qualifier. Sellitti says that anyone in the area having a repeater or knowing of one belonging to another ham, and that repeater qualifies for this exception, to please refer to MetroCor’s on-line F-A-Q in item No. 11. This will give you or the person with the other machine the information needed to gain new coordination through MetroCor. Those in need will find it on-line at www.metrocor.net/faq.htm. (MetroCor, QRZ.com)

**

## THE SOCIAL SCENE: W9DXCC CONVENTION IN ILLINOIS IN SEPT

Turning to upcoming social events, Joe Shrader, W9JUV says that the 52nd annual W9DXCC Convention and Banquet takes place Saturday, September 18th. This years venue is the Holiday Inn Chicago in Elk Grove, Illinois with noted DXer and author John Devoldere, ON4UN, as the featured banquet speaker.

John Devoldere leads the world in countries worked on 80 meters with over 350, and is first ham outside of North America on 160 meters with over 290 contacts. He is also an avid contester was elected to the CQ Contest Hall of fame in 1997. Devoldere is also one of the best speakers in the hobby.

This is a show you won’t want to miss. For registration and lodging information visit the www.qth.com/w9dxcc on the world wide web. (W9JUV)

**

## THE SOCIAL SCENE: SVHFS IN NC NEXT APRIL

And make plans now to attend the 9th Annual Southeastern VHF Society Conference. The 2005 gathering will be held in Charlotte, North Carolina next April 29 and 30.

Guy Titman, K4NUS has offered to be host and facilities chair for 2005 gathering. More information is on the web at www.svhfs.org (VHF Reflector)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM TECHNOLOGY: HAM DREAM DIGITAL VOICE QSO

What is believed to be the first two-way digital voice contact in South Africa took place between ZS1AN and ZS1AU on August 10th. Contact was made on 15 meters with both amateurs using Ham Dream software for the QSO. Amateur Radio Newsline’s Bruce Tennant, K6PZW has the details:

--

Ham Dream is an open-source version of the Digital Radio Mondiale broadcasting standard. It was adapted for amateur use by HB9TLK and gives hams the ability to talk almost noise free. Here’s how.

Speech is converted to digital data using a low-bitrate vocoder analog to digital converter. The data is then transmitted using a high-speed modem. At the receiving end the data is decoded to recover the audio at the receiver. Although still in the evelopment stages, there is worldwide interest in Digital Voice, which can deliver very high signal-to-noise ratios over medium quality narowband S-S-B channels.

For those who want to experiment, HamDream software can be downloaded free of charge from the South African Radio League's website at www.sarl.org.za.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, reporting.

--

Further information on digital voice in ham radio is available on HB9TLK's website. Its in cyberspace at www.qsl.net/hb9tlk (GB2RS)

**

EMERGING TECHNOLOGY: TiVO OVER THE NET

Federal regulators have approved technology allowing TiVo subscribers to send copies of recorded shows over the Internet.  In its decision, the Federal Communications Commission said the new feature by Alviso, Calif.-based TiVo has enough protections in place to prevent mass distribution of copyrighted material.

The technology would allow a TiVo subscriber to download broadcasts to a computer and send copies of recorded shows over the Internet to an office or home or to a small circle of friends, as long as they are on the subscriber's registered account. The Motion Picture Association of America, the National Football League and others complained that the new service would allow the 1.6 million TiVo subscribers to redistribute shows over the Internet to virtually anyone, anywhere.  (Published news reports)

**

EMERGING TECHNOLOGY:  FCC TAKES NEXT STEPS TO PROMOTE DIGITAL TV TRANSITION

Its full speed ahead with the conversion to digital television.  So says the FCC as it issues a Report and Order that it says implements several steps necessary for the "continued progress of the conversion of the nation's television broadcast system from analog technology to digital television.

The paper covers almost every aspect of the conversion process over the next several years.  It also highlights the coming events and should be considered "must reading" for those interested or involved in the future of digital T-V. You will find it on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250542A1.doc  (CGC, FCC)

**

WORLDBEAT:  NEW UK REPEATER SERVES LONDON AND KENT

And if you are planning a trip to the UK, don’t forget your reciprocal license and your HT.  And be sure to try out a new repeater serving the needs of hams in the North Kent and South East London England area.

Its call is GB3OK and it is sponsored by the Bromley Repeater Group and it went on the air on the 16th of August.  It transmits on 145.650 MHz with the standard 600 Kilohertz input offset and requires a 103.5Hz tone to access the receiver.  The trustee of GB3OK or repeater keeper as the British call them is Tony Ravelini, G1HIG, in the city of Kent.  (GB2RS)

**

DX

In DX, HA3JB tells the Ohio Penn D-X Newsletter that he will operate as SU8BHI from Cairo, Egypt.  This, from September 21st through December 20th.  Activity will include CW, PSK, RTTY, SSTV and some SSB.  QSL direct to  HA3JB.  (OPDX)

And UA9OBA, has been active as JT100M.  This is a special callsign being used until September 13th during the Mongolian leg of the Altay-Himalaya Transasian off-road expedition. Activity has been mainly on 20 meters SSB around 14.180 Mhz. QSL via UA9OBA. (OPDX)

**

THAT FINAL ITEM: THA FINAL ITEM: A KEYLESS T-HUNT

And finally this week, a Michigan ham radio operator from the Ford Motor Company was part of a two man team that has solved the mystery of malfunctioning remote keyless car door openers, garage door openers and other such devices in Las Vegas, Nevada. A problem with R-K-E devices that had baffled many residents since a massive outage began last February.

Las Vegas resident Bill Zawistowski was one of those complaining. He and others vented their frustration to anyone who would listen including the FCC. Ford responded by flying in two R-F detectives. Earl Morse, N8SS, represented the auto maker and Nabil Hachem was from Alps Automotive, which makes the keyless car-door devices. And it did not take very long for Morse and Hachem to figure out what was happening:

--

Morse: “When we got there we discovered a signal in the paassband of the RKE receivers which was actually strong enough to keep the RKE from activating its own receiver in the vehicles. We investigated further and found it to be a stuck repeater. We can leave it at that.”

--

Morse says it was not much different than a ham radio T-hunt except for the frequency:

--

Morse: “Having experienced Fox Hunting first hand. the only difficult art was shifting all my equipment to that frequency. All of my antennas were relatively useless because they were cut to 2 meters an 440 so we had to make some new antennas for the 315 Mhz. band.”

“We did have one advantage in that the RKE group had purchased a Doppler direction finder and we utilized that a lot.”

--

Morse tells Amateur Radio Newsline that once they found the transmitter it only took a few phone calls to get it turned off. The problem did surface again a week later but this time one landline call got it to go QRT for good. (ARNewsline (tm))

I don't know if it still exists, but KELO 1320 used to even advertise it had
a Franklin.

Well, if the utilities down there put the wires underground, they wouldn't have problems with the trees ripping them down.  Of course, that is also the case here in North Carolina, where ice storms cause millions of outages, lasting weeks at a time.  (Remember two years ago?) -- I had no power, heat etc for several days. Parts of the city were without for 2 weeks.

After just a few days people get grumpy.  Then gain, if they are smart, they buy a generator big enough to handle their house, and stay warm/cool/whatever when the rest of the neighborhood is dark.

The pertinent FCC rule (47 CFR �73.1201) contains no requirement as to the font size of a visual legal ID.  It does say that TV stations may ID *either* aurally or visually.

Might have trouble with the roots of the trees ripping them up as they pull out of the ground.  And then there is the problem of gnawing animals.

A few years ago I was driving around the countryside near Plymouth, England. I was surprised that the utilities were underground even out in the countryside.  I never figured out whether this was some "Beautiful Britain" scheme or because of the frequent gales they get along the English Channel.

No carbon dioxide, no plants, little oxygen.

No feces, little agriculture. Well, some places anyway.   :-)

OTOH, no feces, very few politicians.

by George i think hes got it!

consider: CO2 is necessary for tree/plant life. human/animal waste products enrich the soil, which aids plant growth. which provides healthy food, which gives us humans more time to build and operate radio stations for the enjoyment of the multitudes. the more people the more the cume and TSL therefore the more cash flow and life is wonderful.

searching back trying to find who added all these freaking cross posts...
this thread just started out in

I quite frankly urge all kids to smoke. And all adults too. It can
only help the environment, the national budget and the darn check out
lines.

>> I know many transmitter engineers, AM & TV, that had cancer-type
>> diseases as they retired.
>
>Just wait until all the kids using cell phones today don't live to even get to
>retirement age.

And thats a bad thing? Dont you realize the US has less than 100 years
left of existence if mortality rates continue to decline, and live
much longer while still reaching senility approximately the same age?
Larger numbers of people need to realize thier duty is to die if they
continue to exponentially reproduce or the clean water wont be there,
the food wont be there, and the government will literall go bankrupt
trying to provide care for them (us) all.

>
>> And as far as trusting the government reports on NIEMR, would this be

Geez, lighten up. You have problems about dying. Get over it. It will
get you. Do what you want while you are here. Have some fun. You may

die. Oops, I mean, you WILL be dying! And the cool thing about it is you wont know it happened, you wont care and you wont feel it (being dead).

So since all OTA stations are buggy whips trying another foolish polish (HD Radio).... they wont be around too much longer anyhow.

OK, I know all this.  Commercials are life and they suck.  Now about about this: IMAGING! I am so sick and tired of hearing all this junk that spews out which "images" a station. I think some is good, but not all the time! This is part of the clutter that I cannot stand. I must be old fashioned on this one.

I.

They're great if you have unlimited money.  If not, not so great.

I've never had that size budget at my disposal.

There's still a lot of serious controversy about IBOC. A station would
be foolish to promote it heavily until the bugs have been worked out
and they know it's going to fly. At this moment, nothing is certain
and interference could cause the FCC to shut some IBOC services down.

In my opinion, no good at all. In the opinion of those who stand to
make millions with the technology, it's God's gift to radio.

Rich

Ask the engineering staff at some of the CBS/Infinity/Viacom radio stations.
A lot of them are running Klotz Digital...as well as XM Satellite radio.
So far MANY do like them...a lot.

The operations manager for the local Ken Hamblin affiliate just called me all in a tizzy, saying the satellite channel was silent and the KH website was not there.  Has Brother Ken pulled another walkout or has the show moved to a different network or is my OM friend just looking in the wrong places?

In deference to Steve who says the previous thread is dead, let me answer David's question about KDKA's "Franklin"....but only to say that KDKA's Franklin wasn't truly that. A Franklin radiator looks like two self-supporting towers, one inverted on top the other, fat ends touching. The one such that I remember (and I'd have to think that most of us have seen the picture) is WLW's tower that participated in the superpower experiments in the 30s. KDKA's radiator was simply described in the license as a center-fed vertical radiator, where the base impedance and input power was determined through quasi-indirect means at the input to the balun necessary to match the balanced feed point with the unbalanced transmission line (in years past, this stick was fed with balanced feed line, not unlike VHF twin lead on acid...hams know this feed line as "ladder" feedline, because of the characteristic cylindrical insulators placed at regular lengths along the conductors to maintain the correct separation between those conductors).

KDKA's antenna was fairly broadbanded, which if I remember correctly is a feature of center-fed radiators. But WLW's Franklin, because of the larger cross-section where current was higher, had a very nice, minimally-sloped reactance curve, and thus a very consistent, symmetrical impedance...if you ever heard WLW when they played music in the 70s, it really sounded great. KDKA's system had, of course, a ground system, to help pull down the skywave, but due to the fact that my manager (who shall go nameless to protect the embarassed) let the neighborhood kids ride their BMX motorcycles on the property (she thought that the presence of life on the transmitter grounds would deter vandalism), breaking a significant number of radials that were exposed by rutting after heavy rains dredged out the BMX paths, it didn't work all that well...on solar max periods, we'd often get fading well within our local metro coverage area because so much power went skyward and came back down, just slightly out-of-phase with the ground wave.

The antenna I had direct experience with was replaced in the mid 90s, but from what I've heard the only thing that was changed was the steel....the basic design was retained, and the counterpoise was repaired.

> less).

-----------

Most 50 kW AM stations in the US are using a Harris DX series transmitter,
and it is about 86% efficient -- 58 kW AC input at 50 kW carrier.

Even with 100% sine wave modulation it consumes 'only' about 87 kW from the
AC line.  Power consumption during normal programming is less than that.

With all the off topic cross posting you have done most people think you
are an idiot and have you in their kill files. Try sticking to one group.

It's easy to see if you follow the news regularly that the above is a trend in all kinds of businesses. In many it leads to constant "restructuring" (layoffs) to eek out a bit more profit, even though the company is thriving without the restructuring. Our masters have lost all sense that they need to keep their greed in some kind of check.

Indeed ... hence the not insignificant popularity of the DX-50 or 3DX-50.

IMO, the Nautel sounds better.

I would go with the SAS Rubicon.  Of course this is only from seeing it
on the NAB floor last spring.  I've heard stories both positive and
negative on the Klotz.

Sorry I am of no help here.

Later,

I.

And yet it does.  How, if I may ask, do you think that the radiation pattern of a
180
degree vertical element is lower than a 90 degree radiator?  As you mention, it's
current distribution, but it's not as simple as you've characterised.  The field
is
generated by the summation of the currents over the length of that antenna that
combine to provide the "pull-down" effect you mention, and in the process, since
the
infinitesimal slices of the radiator, each contributing its own part to the
overall
field, also interact with each other in much the same way as separate elements in
a
directional array interact, the phasing and amplitude over the length of the
radiator
serve to enhance the direction towards the horizon and reduce radiation towards
the

sky. Now, the reason why the base impedances are different for these two examples is the same as why the effective impedance for one element in a directional array changes when a second element is introduced into the nearspace around that first element, because the interactions between the infinitesimal slices serve to increase the "coupling" of the radiator to space. It's all calculus, with a heaping serving of trigonometry thrown in for good measure.

> If properly matched to their transmission lines, both of them radiate the

I long ago recognised that, in the physical world, you don't get something for nothing (a concept which, it's pretty clear, the current administration in Washington doesn't get...or maybe they do?). Nothing in what I've discussed is ignorant of this, although admittedly it's not explicitly stated. We broadcast engineers tend to look at radiation patterns as they relate to the potential audience, knowing that the areas we've pulled power from won't miss it, and then pat ourselves on the backs for having designed an antenna system with "gain."

Well, there you have it. 1.56 times, while not exactly 2, is closer to 2 than it is to one. Consider that, since radiated field is over an area for our purposes, a radiator half as effective as the reference would have 70.7% as much field, or the reciprocal of the square root of two. It was a gross approximation, Richard. From what I've seen of broadcast engineers, many have only a practical knowledge of the underlying theoretical concepts...whether it's the understanding of modulation theory (how many people do you know who think that amplitude modulation actually manipulates the amplitude of the carrier? Or that FM actually changes the centre frequency?) or

antenna design, or solid state theory...never mind quantum theory.  I don't believe
that getting down to this level would serve any practical purpose in this newsgroup,
however, especially since I'm not prepared to start introducing mathematical
equations into a text-based format.

The way I count, it has dropped to about 1/2 or 1/3 what it was 3 years ago
when XM signed on.  (Unless you got one of the Friends & Family deals back
then or ....)  In any case the price is considerably subsidized from what I
hear - in both XM and Sirius cases.

B. Haberkost:
> And yet it does.  How, if I may ask, do you think that the radiation
pattern of a 180
> degree vertical element is lower than a 90 degree radiator?  etc

Not because of any change in base impedance.  The electrical height of the
tower determines BOTH the elevation pattern it produces, AND the base
impedance of that tower.  Base impedance is an effect, not a cause.

If base impedance determined efficiency and "power transferred," then a 90 degree tower should have very nearly the same elevation pattern as a 245 degree tower, because the base impedance for those two heights are very similar (90 degree is  about 63+j105 ohms; 245 degree is about 64 +j50 ohms).  Yet the elevation patterns for these two verticals are greatly different.  The elevation pattern of a 245 degree vertical has two distinct major lobes; one centered on the horizontal plane, and one at about 45 degrees.  The 90 degree tower produces an elevation pattern with a single lobe centered on the horizontal plane.

These verticals can be computer-modeled to show their shapes and intrinisic gains in dBi.  I'll e-mail you a graphic I generated in NEC to compare them for you.

Sequence #2...

R. Fry:

To help you compare geographic areas covered by a 90 degree vs a 180 degree radiator, here are the numbers using the FCC's MW coverage program.  For 1kW input power to the tower base, a 1,000 kHz carrier, and conductivity of 8mS/m, the radial distance to the 2mV/m contour is 25.6 miles from 90 degree tower, and 28.5 miles from the 180 degree tower.  The areas covered are 2,058 mi� and 2,550 mi� respectively.  So the 90 degree vertical covers about 80% of the area served by the 180 degree vertical.  Not very close to a 2:1 difference at all.

Sequence #3:

> From what I've seen of broadcast engineers, many have only a
> practical knowledge of the underlying theoretical concepts...whether it's
>the understanding of modulation theory (how many people do you know
>who think that amplitude modulation actually manipulates
> the amplitude of the carrier?  Or that FM actually changes the
>centre frequency?)

The instantaneous frequency DOES change with frequency modulation, although the average center frequency stays close to the unmodulated value.  In fact, a very common FM exciter design uses the incoming program audio to change the resonant frequency of the frequency-determining components of an RF oscillator, whose resting frequency is the stations licensed carrier frequency.

Well, as I say, the better stations decided that if they must do news,
they might as well make the best of it.   I worked in that kind of
operation, as well as a few where the 24/7 news coverage was nothing
more than running the network hourlies or jocks reading wire copy.
The latter operations were the majority.  In the pre-deregulation
'70's a number of music stations figured out that they could game the
system by running huge amounts of mostly rip'n' read, pre-recorded
news in the overnight shift, thus clearing most of it out of the
daytime hours where it was considered by PD's to be a tune-out factor.
I worked in one of those, too.  I remember one night in my wild youth,
taping a 30 minute newscast that ran at 3 AM while quite obviously
drunk.  Nobody ever noticed.

Mark Howell

CBU is 50,000 watts day and night. Most canadian stations that are 50 kw at night are pretty near the border, as most of Canada's population is near the US border.

No 50 kw stations operate in 1650 to 1700. All are 1 kw at night in North America.

As I mentioned, there are nearly 50 Canadian staitons with 50 KW at night on AM.

His drugs and life style. Total irresponsibility during a time when responsibility and maturity were needed rather than his altered immature state.

That was Leary's conclusion, too.

So you had a bad experience did you?  The evidence based medical practice
literature does not agree with your bad experience.  That's why it gets
paid for by insurance.

It was the US Army that started it, with their experiments on the use
of LSD for mind control, or chemical warfare.

Neither did insulin, but it still remains popular.

They're not--but they've discovered there's a potential audience for
it and being smart businessmen, they're putting their political views
aside to see if it'll be worth anything.

I wouldn't be picky, if I was you--whatever it takes.

>where are brochures for them on the web?

I think this is the sort of thing you're looking for:

http://www.talkinghouse.com/newweb/

Easier enough to find on Google!

There are plenty more out there.

--------------------

The above calls for a bit of discussion, IMO

The base current of a MW vertical radiator depends on the resistive term of the base impedance of that radiator, according to the equation I = sqrt(P/R), where P is the applied power and R is the base resistance.

However current is not uniform over the height of the radiator.  It must satisfy the physical reality that a current node (minimum) always must exist at the top of the tower.  Other current nodes occur at 1/2 -wave intervals below the top, if the tower is tall enough.

Between the nodes, current rises to a loop, or maximum, at intervals of 1/4 wave.  The maximum current present at the loop(s) is a function of the amount of power applied to the base of the radiator -- not to the base impedance of the radiator.

So for a given input power, the same absolute value of current will be present starting 1/4 wave below the tower top, and repeating every 1/2 wave below that -- regardless of the base impedance of the radiator.

Far-field radiated EM waves from MW vertical radiators of any height are identical in that they all have equal electric and magnetic vectors at right angles to each other.  A ferrite receiving antenna performs well on MW frequencies for reasons unrelated to the ratio of the E & H fields in which it is immersed.

For sale:

(The "Radio Crazy" is loose!!!)

Partial interest in 1 KW AM daytimer in small Alabama city. Non-directional. County seat. City of over 10,000 population. About 30,000 in county.

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $5,000 each are welcome. All investors would be on the board with full voting rights if desired. No investor can hold over 49 percent interest. This goes for me too!

Total consideration for the station will be about $40,000. No real estate is included. NO REAL ESTATE IS

INCLUDED!! You heard it first from me, kiddies!!

> 900 MHz are NOT microwaves

Interesting.   Especially since the older microwave ovens operated on 800 and 900 Mhz.

Why are people who are uneducated in certain subjects always the first to jump in on a conversation and tell everyone else how they think things really are?

Can anyone help me to find either scripts or tapes of Georgie Jessel
from back in the "good old days?" I've searched the net until my
fingers are numb and am coming up empty.

I sure would appreciate the help!

Thanks,
Lisa

Insulin isn't a drug:

http://www.endocrineweb.com/diabetes/2insulin.html

You'll need to find a better analogy - yours is, well, broken. :)

No, I didn't have a bad experience. And the evidence does NOT contradict me.
I've seen it. I think they know a thing or two in the New England Journal of
Medicine.  You don't talk to a broken machine to fix it.

> That's why it gets paid for by insurance.

That's hardly evidence.

Would you call a radio station and ask the receptionist how many
towers they use? Why would you expect an ordinary employee, not in the
engineering department, to know about IBOC? At this point, it's highly
experimental and not promoted heavily.

I worked at WOR for 10 years. It's a big place with a lot going on. If
you want to know about IBOC, talk to their Director of Engineering,
Tom Ray. He can tell you more than you'll ever remember about the
system.

I worked at Detroit's all-newser, WWJ/950, in the mid/late 80s, and they still had the teletype sound running in the background. I believe it was on a continuous loop mechanism, likely the same variety that was used at CKLW/800 in its 20/20 News heyday.

WWJ remains all news, but the teletype sound was dumped years ago.

John Z

Similar to the sound of dragging a needle across a phonograph record.
Younger people today associate a particular meaning for that popular
sound effect, but have no inkling as to what it's actually about!

KTVU in Oakland -- yes, a television station -- actually *added*
that sound effect, very softly in the background but in stereo, a
little more than a year ago.

Mark Howell <geezer@radio411.com> had written:

| In the pre-deregulation
| '70's a number of music stations figured out that they could game the
| system by running huge amounts of mostly rip'n' read, pre-recorded
| news in the overnight shift, thus clearing most of it out of the
| daytime hours where it was considered by PD's to be a tune-out factor.
| I worked in one of those, too.  I remember one night in my wild youth,
| taping a 30 minute newscast that ran at 3 AM while quite obviously
| drunk.  Nobody ever noticed.

When KWK came back on the air in St. Louis in 1978, it had one newscaster, who did newscasts from about 2 am until 9 am.

For sale:

Partial interest in 1 KW AM daytimer (non-DA)in small Alabama market. Community is the county seat and has a population exceeding 10,000. County population exceeds 30,000. Station is on the air since 1949.

This is a joint venture. There is an element of risk and you could lose all or part of your investment. (Standard required disclaimer).

The is NO real estate included. Total asking price for station is $60,000 cash or $75,000 with seller financing.

Active or inactive investors with a min. of $5,000 each are welcome. All investors would be on the board with full voting rights if desired.

Tel: (478)741-1710 in Macon, GA.

Please! No "tire kickers" and/or "AM bashers", etc.

Those properly identifying themselves will be given city of license and call letters, etc.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

aka Moron Gottesman
aka Maven Gottesman.

FCCInfo.Com lists WFAN New York with a CP to change power to 35 KW day and night (with "Mode" ND2, non-directional 2 (whatever 2 means...non-directional different patterns day and night...hello???).

Anyway...anybody know why WFAN...with a great signal, best in New York, low frequency 660 kHz, 50 KW ND, island tower site (multi with WCBS) with salt-water path to surrounding land...would want to drop to 35 kHz.

Reduce electric bill???

What's the story?  Temporary?

The best 50 kw heritage AM signals in New York are...in order...WFAN 660, WABC 770, WCBS 880, and depending where you live, directional WOR 710.

And, again, depending where you live in relation to patterns...WBBR 1130, whatever ESPN calls the former WHN WEDW 1050, poor WINS 1010, and signal poverty-stricken WQEW 1560.

WTIC Hartford, 1080 50 KW is a curious case. Maybe its transmitter site dates to a time when ground conductivity wasn't appreciated, but it is located on a rocky mountain ridge, above and west of the flat, Connecticut River mud flats and plains. Of course today, acquiring a site along the river is probably impossible, but WTIC's signal suffers when compared to similar-frequency NYC signals, 1050 or 1130. As for WINS, NYC 1010, nobody else is that bad.

I never understood why some years ago in the big NYC frequency shuffle, why Westinghouse didn't plunge into the frey for 1050 when WFAN departed it for 660. WEVD would have done just as well (or poorly) on 1010 as they did 1050, and WINS would have done much better area-wide on 1050.

ref
http://chemindustry.intota.com/multisearch.asp?mode=&strSearchType=all&strQuery=microwave%20frequency

ref http://www.k5rmg.org/A-soup.html

in most definitions microwaves start at 1GHz or 30CM

what frequencies "microwave ovens" use is irrelevant as marketers can pretty much name anything what they want.

Yeah, why is that?

http://en.wikipedia.org/wiki/Microwave

(For the non-curious, the paragraph of interest says:

Microwaves, also known as Super High Frequency (SHF) signals, have wavelengths
approximately in the range of 30 cm (1 GHz) to 1 mm (300 GHz).

)

CBU's 6160 khz SW relay not effective at all.

A 50 kw shortwave transmitter (running DRM, backward compatable AM + DRM modulation) and a Horizontal Log Periodic antenna could serve 50% (potentially 75%) of Canada's landmass.

http://cbc.am/cbc.htm

Canada's rural and northern populations are for the most part not fully served by AM & FM radio stations during daytime hours. Although CBC North runs an extensive AM / FM and TV network for northern Canadian residents -- there are still millions of square kilometres that the CBC-SRC will never be able to reach with its current broadcast network.

The lack of daytime information radio network service does not help northern and rural residents in their day to day lives. It goes without saying that the lack of access to an information radio service in Canada's remote regions increases the demands on expensive to deliver federal and provincial services. Poor delivery of basic government services has led to a negative relationship between northern and rural residents and Canada's southern urban population.

In a matter of speaking CBC-SRC has pretty much failed to meet fully the news and information needs of all northern and rural residents, since these residents fell into the revised CBC-SRC mandate in the 1970s. This mandate is providing a basic information radio service to all of Canada's regions.

Most of Canada's populated remote areas can be reached cost effectively with two shortwave transmission sites. Shortwave is an ideal media for delivering radio programming to remote regions during morning, daytime and evening hours. The proposal before you is for a transmitter site in British Columbia that could serve western and northern Canada and a transmitter site in Newfoundland that can reach Labrador, Northern Quebec and regions in the high arctic that are poorly reached by the BC transmitter site.

Technical Notes

This proposal is for a two frequency network in the 49 meter & 41 meter bands shortwave (in the ITU band allocation

system) using four fixed frequency 50 kw transmitters. It is possible that higher powered transmitters could be used to combat shortwave fading. Current calculations suggest that a slightly higher powered transmitter will be needed to reach listeners in eastern Canada, as there are more severe ionospheric distortions due to Quebec being situated over the magnetic North Pole.

The two transmitters would be expected to run in parallel around 16 hours a day, out of a shortened 112 hour week transmission schedule.

It is assumed that the shortwave transmitters would be fully DRM (Digital Radio Mondiale) compatible. DRM allows for FM radio quality digital audio over very long distances. DRM is fully backward compatible with existing consumer and professional shortwave receivers.

I expect a new frequency allocation for this shortwave service, as the CBC-SRC is already using two shortwave frequencies (http://www.cbc.ca/frequency/shortwave.html). The CBC-SRC needs to make a uniform allocation of 40 khz for domestic shortwave broadcasting within the 49 m and 41 m bands. This allocation would be made for use by all domestic shortwave broadcasters.

These area coverage computations do not represent full optimization. The frequency and antenna types may need to be altered to achieve the goal of covering 95% of Canada's land mass with a reliable shortwave service.

Here's an article from RadioWorld about how radio needs to reduce its clutter.

http://www.rwonline.com/reference-room/skippizzi-bigpict/03_rwf_pizzi_sept_1.shtml

This is a strong pet peeve of mine. As a one-time radio GM, our stations held firm on clutter and price, but we were undermined by the competition and our customers. Of course, my argument was still right... that too many commercials is an incredible turnoff factor for listeners, and if people don't listen, no one hears the spots. And our stations remained numbers one and two, so I know we were doing something right.

Now that I am a listener, I am one of the first to turn away from a station that plays too many spots, especially if the spots are totally uncreative, boring and repetitive. Sometimes stations play the same spot twice during a single set! How effective can that be to that customer?

Radio has become ridiculously redundant.

Sep 1, 2004

BBC Radio 4 this weekend will air a documentary on Amateur Radio's involvement in the September 11, 2001, terrorist attacks.

The half-hour program, "Unsung Heroes," will be broadcast Saturday, September 4, at 1030 UTC. It will remain available on the BBC's archives for one month after that. "Through moving interviews, sensitive use of ham radio transmissions and some harrowing accounts, 'Unsung Heroes' reveals the little-known story of the 9/11 ham radio operators who provided vital communication networks for the rescue agencies," the BBC program listing says. "Hams, often mocked for their obsessive hobby, believe that September 11th became Amateur Radio's finest hour. Stephen Evans, the BBC's North American Business Correspondent, witnessed the attacks that day and meets with ham operators who witnessed the terrorist attacks or lost friends and relatives on September 11th and still helped to support the search-and-rescue operation."

Mark Phillips, KC2ENI/G7LTT, says the program, produced by Kate Bissell, features N2NOV, KF2EO, KE2UN AB2IZ, "and a whole host of others," including himself. It was recorded during the last week of June. The program also be available in MP3 format on Phillips' Web site starting September 4.

>>
As for WINS, NYC 1010, nobody else is that bad.

I never understood why some years ago in the big NYC frequency shuffle, why
Westinghouse didn't plunge into the frey for 1050 when WFAN departed it for
660. WEVD would have done just as well (or poorly) on 1010 as they did 1050,
and WINS would have done much better area-wide on 1050.
>>

Before 1941, neither 1010 nor 1050 existed.

Both were added as Class II-Bs during NARBA.

Of all the DA-1 Class II-Bs, 1050 is the best engineered.

WFAN existed only briefly on 1050. 1050's heritage call is WHN.

This is an auxiliary transmitter with a shot tower to use when the shared WCBS and WFAN tower is being maintained and in case of an emergency.

They are NOT reducing power.

For sale:

Partial interest in AM/FM station in small coastal Alaska city.

(The "Radio Crazy is baaaaaaakkkkk!!) Hi!

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired. No individual may own over 49 percent. This means me too!

AM is 1 KW fulltime. Low dial spot, non-directional.
FM is class "A".

No real estate is included.

Total consideration will be under $100,000. This is a STEAL, folks!!

Tel: (478)741-1710 in Macon, GA.

I am not going to waste time giving out the name of my parole officer. You regulars already know it. HI!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman.

# Labor Day Reality: Less Jobs For Disc Jockeys Though The Year 2012

(Little Rock) -  At last count, there were 76,000 people in the United States working as disc jockeys and announcers.  But, The U.S. Department of Labor says the number of jobs for DJs is expected to decline through the year 2012.

This is due partly to the lack of growth in the number of stations plus now, more than ever, several stations may be operated from one central office or region which reduces the need for staff.

"Many radio stations operate overnight without any staff opting to instead broadcast programming that may have already been  pre-recorded, is fed by satellite or otherwise automated with or without the addition of voice-tracking," says Corey Deitz, a 25-year veteran radio broadcaster and author.

Voice-tracking is a controversial technology which allows DJs to pre-record complete radio shows while making them still sound live.

What are DJs earning these days?  "According to the U.S Department of Labor, the median wage earned is between $7.13 and $15.10 an hour," says Deitz. "The lowest-paid 10 percent earn less than $6.14. The highest-paid 10 percent make more than $24.92 an hour. Of course, some air talents earn much more but they are the exception."

Deitz has worked on-air in cities such as Chicago, St. Louis, Cleveland, Richmond, Columbus, Virginia Beach and Little Rock.  He is also the Radio Guide at About.com His book, "The Cash Cage", provides an inside look at what the Radio business is really like.

For more information, visit:

http://www.thecashcage.com

About Corey Deitz: Deitz is a 25-year veteran broadcaster who has seen the business from small to major markets. He currently does a syndicated morning show based out of Little Rock, Arkansas. He is also the Radio Guide at About.com (http://radio.about.com) where he writes about various aspects of Radio on a regular basis.

I assume that 35 kW is for the backup tower, although the question remains
why 35 kW?  Did the FCC limit the power because of interference caused by
high angle radiation, or could the backup tower not take full power from
both WFAN and WCBS?  Also what is the "2" in ND2 all about, I can't see
any difference day and night?

>>

Only for its auxiliary stick, not its main stick.

It's main remains 50 kW, as ALL U.S. Class As must operate, unless grandfathered (Bakersfield's 1560 only) or a former Class I-N (Alaska only).

ND-2 = non-directional, different "notified" efficiencies day and night.

660 and 880 can also be diplexed into the auxiliary, as they are already diplexed into the main.

So, these operations are theoretically possible:

1) 660 and 880, each with 50 kW, into the main,

2) 660 with 50 kW into the main and 880 with reduced power into the auxiliary,

3) 660 with reduced power into the auxiliary and 880 with 50 kW into the main, and

4) 660 and 880, each with their respective reduced powers, into the auxiliary.

I would have been terribly insulted if the Democrats had preached hatred, I expected otherwise last week but got it on TV from the Republicans.

I'm glad that I don't live in the United States, where 45 Million go without the right of health care and most think that the real issues with poverty have to do with the fact that the poor are in the way and fucking up the statistics.

Such a great country, full of so many imbeciles who are told so much crap, which they believe.

>>

That is the consensus view ... the high-angle radiation towards co-channel stations with the short auxiliary and 35 kW was about the same as with the tall main, and 50 kW.

I guess under a CP case, a Class A is no longer allowed to increase its signal towards a station of lesser class [ * ] .

Under the old rules, a Class A could not increase its signal towards a station of the same class.

For this situation, WSAI had to install a DA which protected WWKB/1520 and

ZNS-1/1540, to about 40 kW. Before, it sent more than 50 kW towards those two
Class As.

[ * ] Look at WOR's CP DA ... it must provide substantially greater protection
to CKVM, and CKVM has been dark for some time, although it is still notified.

I've noticed that the CDBS now often has separate day and night listings,
even where the parameters are the same. See the applications for WYCB and
WOL for example. They are both Class C stations.

a pretty safe assumption would be that the management and accountants took a
look at the cost of a full power back up and said something like: "figure
out a way to do this for 30% less"

with a 50 kW AM transmitter the power draw will be about 100 kW (maybe a tad
less).  if it needs to have generator power the cost would skyrocket.  a new

100 kW gen  (N gas powered) at this years prices costs from $43,000 to
$60,000 installed (depending on site requirements).  deisel would be just a
little less.

Did the FCC limit the power because of interference caused by
> high angle radiation, or could the backup tower not take full power from
> both WFAN and WCBS?  Also what is the "2" in ND2 all about, I can't see

When I worked at WTAE, and Ted Atkins came to the station, I was the one assigned to record the teletype machines for the loop he wanted on-air when the Drake-conceived 20/20 News format was to start, along with the launch of the legendary Bill Drake oldies format (wow!  That was 31 years ago this week!) on Labor Day weekend.  (For those not aware, Atkins was a disciple of Drake, having worked for RKO with CKLW and KHJ before coming to WTAE.)

I never really liked the sound (KYW had been using it for years, since the start of the Newsradio format that was spawned by Group W) so my recording was, shall we say, less than spirited....the several machines were mic'ed from a distance, which in my mind was appropriate since the noise was to, I thought, be similar in nature to what one would hear if the machines were "in the newsroom" where the newsreader was "stationed" so that the news might be assumed to be "the lastest word."

Well, that wasn't good enough for Atkins, and he took me back to the room and showed me how he wanted it mic'ed....with the lid open, a broomhandle laid in back of the paper, so as to lift it and make the keys go clack-clack-clack, and the mic stuffed down the front of all of it, so as to be right there.  In fairness to Ted, through all of this he was respectful and instructive, so don't get any ideas that my encounter, then or ever, was anything less than this...I learned a lot from Ted, and my own career in radio was as good as it was, in no small way due to the time I spent working under Ted Atkins at WTAE.

So it was all theatre.  That I already knew.  But I never really understood why it is that we had to put our listeners' heads into the teletype.

This is hysterically funny. The host of a syndicated show issuing a press release saying that there are fewer jobs for disc jockeys...when HE and those like him are the reason.

Best laugh I've had all week.

16 X 16 ft double glass doored soundproofed room, The walls are 14 inches thick and insulated.with a dead space in the center .
The cork walled room overllooks a patio with a kitchen . The bathroom has stereo speakers in the ceiling and a shower .
The patio has a fridge, microwave and NTSC vid monitor,stereo speakers and a ratty sofa if you're into nooners in the fresh air . The offwhite patio walls can be painted chromakey blue if you do video inserts .
On the other side of the room are double doors that connect to a large two mic narration booth . It's setup now for internviews and phoners . The booth has 2 mic-line preamps that feed any rooms computer record system with talkback (ifb) It could also feed an Isdn line - directly . You supply the codec (telos ) . The booth walls could have your logo on it .
The narration booth has another door that opens to a control room with national and network commercial and documentary credits .
You park 4 ft from control room window on ground floor. This is good if you unload equiptment or are worried about theft/vandalism . Your vehicle is protected by infrared motion dectector lights . This is is big issue in this part of central Hollywood . We have unusual zoneing that permits you to Live and Work here . Next door is a commercial printer . We are zoned residential . No commercial signs for us .The tradeoff for no signs and being zoned residential is that the owner of the building cant screw with the rent . This place is under rent control . You would have to be low profile about "business" .
A lot of parking for your guests at the corner Rite Aid drug store . You will have 24/7 tech support from a FCC Licensed broadcast engineer . $900/month first & last 1 year lease . $1800 to move in
need to give present tenant not in the business 30 days notice .

Email for .jpgs,equiptment list that is for your use and more possiblities . This would also be a good choice for a voiceover talent, Include your resume . If you need a computer workstation and website we have that for you as well .

Hi All. Well I listened to the comments some of you were kind enough
to email me, and have had another go at a talk show. It was aired on
net station   www.cmpradio.co.uk   on Friday 3rd September.I tried to
do some serious (The sad story of the children in the Russian school),
and some lighter chat.
Still havn't quite sorted my "errr" problem - though it's a lot better
I think.
You can listen to the all talk show here :
http://www.chrisreardon.co.uk/music/dj%20Chris%20Reardon%20UK%20-
%20LIVE%20Radio%20Show%20030904%202%20Low.mp3

Or if you want the high quality version please go to my site
www.chrisreardon.co.uk     ,  click on radio shows,  select   the show
clearly marked High Quality All Talk.

Thanks a lot for your help again.
Chris

Does anyone have any radio magazines or any old air checks from
historic radio stations like, KFRC,WABC, ETC. That they are willing to
give for free. Anything radio related like magazines,lps,cds,records.
I would be willing to talk and make a deal with you.

Amateur Radio Newsline™ Report 1412   September 3, 2004

The following is a message from the Amateur Radio Newsline Support Fund.  Here's the funds administrator, Andy Jarema, N6TCQ.

--

Well,  here I am again, so theres obviously another financial crisis that Amateur Radio Newsline is facing.  And this time its a real doozie.  Let me explain it to you.

During the summer many of you are away and donations dwindle to a mere trickle.  At the same time, some of our biggest yearly expenses occur during July and August.  This includes the Young Ham of the Year Award presentation that we host every year in Huntsville, Alabama.  While we had planned ahead, we did not know exactly how much we would need and we were caught short.  The price of airfares was up as was the cost of hosting the mini banquet for our recipient, her family and friends.

Added to that were higher than anticipated telephone costs to cover the breaking news stories we brought you over the summer.  And right now that leaves us with less than $50 in the bank and several hundred dollars in outstanding bills that must be paid right now to keep Amateur Radio Newsline coming your way.

As we have said before, Amateur Radio Newsline is a federally charted 501(C)( 3) and California state not-for-profit corporation.  For most United States residents it means that your donation is tax deductible.

So please help keep the news on your local net, on your repeater and on your computer by making a donation to the Amateur Radio Newsline Support Fund.  Its address is Post Office Box 660937, Arcadia, California.  The zipcode is 91066.

Again that's the Amateur Radio Newsline Support Fund at Post
Office
Box 660937, Arcadia, California, 91066.

On behalf of the entire all volunteer world-wide Amateur Radio Newsline team, I thank you for listening to this appeal and for your ongoing support that keeps the news of Amateur Radio coming your way.

I'm Andy Jarema, N6TCQ.  Now Amateur Radio Newsline report 1412.

--

Thanks Andy.  Now Amateur Radio Newsline report number 1412 with a release date of Friday, September 3rd, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.  The ARRL bandwidth based restructuring proposal causes controversy and maybe some reconsideration.  Find out more on Amateur Radio Newsline report number 1412 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING:  REACTING TO THE ARRL BANDWIDTH PROPOSAL

An ARRL proposal to restructure Amateur Radio along bandwidth lines has caused a lot of discussion in the nations ham community.  And it may cause the League to rethink its position.  Amateur Radio Newsline's Mark Abramowicz, NT3V, is in Philadelphia, and has the rest of the story:

--

Shortly after the ARRL began circulating the proposal and posted it on its website, the e-mails, phone calls, HF, VHF, and digital-mode traffic took off.

And now, Amateur Radio Newsline has learned the bandwidth proposal may be tabled for more study when the ARRL's executive committee meets next month.

That confirmation comes from W6OBB in Nevada. If the call sign isn't familiar, the name behind it might be. He's Art Bell, host of the weekend edition of "Coast to Coast AM" heard on more than 500 commercial radio stations across the nation.

Bell, who joined the fight against Broadband Over Powerlines several months ago, and featured the subject on his radio program, expressed concern about what he called a Draconian proposal that would over-regulate the ham bands. Bell tells me he relayed that concern in a phone call to ARRL President Jim Haynie W5JBP.

Bell characterizes the discussion as cordial and at the end, he says Haynie related he was re-evaluating the proposal based on many comments he had received.

"He indicated to me and told me I could pass on to you that they're looking into pulling this whole thing back and taking a harder look at it," Bell says.

While Bell says he believes the ARRL had good intentions with the proposal, it may have gone too far.

"What began as an examination by the League of how we could possibly encourage the digital mode, it went a little too far and began to over-regulate," Bell says. "I'd kind of like to see it go the other way and I'd like to see our bands freed up."

Haynie says he's gotten a lot of feedback on the proposal. He says it came from the League's desire to promote - not restrict - innovation and experimentation. He says it was also a response the Federal Communications Commission's desire to see more innovation from the ham community.

"I think we rose to the challenge," Haynie says. "We have demonstrated Software Defined Radio that just knocked their socks off, in my view.

"We have come up with some other stuff - Joe Taylor and some of his things for moon bounce. And I think the Amateur Radio community needed a wake-up call is what they needed and I think that's what we've gotten and were given."

Haynie says it's clear the digital modes like RTTY and PSK 31 need attention.

"Where do we want to go to the future?" Haynie asks. "And, as I mentioned a couple of years ago, I took my model 28ASR  and took it to the scrap man. But that's the standard that's used today is 850Hz shift at 45 baud.

"Well, we don't do too much of that. I'm not saying there's not RTTY enthusiasts out there, there are and I appreciate that and I know that and I want to protect their rights to do those things."

Art Bell says he and others don't object to digital innovation. But he doesn't think the proposal hits the mark.

"There are many with differing interests who are not too pleased with the proposal and, on the face of it, it simply does not make sense," Bell says. "I agree that we should encourage the digital modes and development, but we shouldn't try to push something into place that is not techincally ready to happen yet."

Restricting bandwidth, Bell says, won't promote innovation.

"Why do we have to cut and slice and dice and regulate," Bell says. Why not just let anybody virtually go anywhere and let all of us just live together with some gentlemen's agreements which we have now and which work very, very well on most bands?

"So with that in mind, look at the Canadians. The Canadians have a 6khz limit and they can go anywhere on the band they want from the bottom to the top. And I don't see why that would not apply and work well in America."

Haynie says he wants to hear more from hams and he's encouraging all of us to get into the FCC's Part 97 rules and share input on the proposal at the ARRL's website, that's ARRL-dot-org.

"Look at the rule book and see what's there now, "Haynie says. "And, is there something that could be changed that would allow a new technology to be developed, then that's what we want to know."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on the ARRL proposal and reaction to it in upcoming Amateur Radio Newsline reports.  (ARNewsline(tm))

**

RESTRUCTURING:  DROPPING CW TESTING IN CANADA

Meantime, to the north, another form of restructuring proposal is being considered by hams in Canada.  This as telecommunications regulator  Industry Canada publishes a Gazette Notice called "Recommendations from Radio Amateurs of Canada to Industry Canada Concerning Morse Code and Related Matters".

The Radio Amateurs of Canada proposal deals with the WRC-2003 decisions concerning Morse as a compulsory qualification for High Frequency operation in the Amateur Service.  Radio Amateurs of Canada has recommended that Industry Canada delete the mandatory aspect of the requirement for Morse testing but leave it as a voluntary qualification.  This, because knowledge of code  may be required for reciprocal operation in those countries retaining a Morse requirement.

The notice was published on Saturday, August 28th and gives Canadian radio amateurs sixty days in which to respond.  Radio Amateurs of Canada recommends that the nations ham community endorse this proposal. (RAC)

ENFORCEMENT: 10 METER INTRUDER WARNED

Here in the United States a commercial business has been warned to stay of the 10 meter ham band. The FCC's Daryl Duckworth, N-N-Zero-W, explains:

--

Duckworth:"Dandy Service Corporation of Warrendale, Pennsylvania, was issued a warning notice fot unlicensed radio operations on 28.085 Mhz. Two of their vehicles were the source of transmissions on August 5th of this year in Michigan on Interstate 94 at mile-marker 262."

--

Dandy Service was told to advise its drivers that operation of radio transmitting equipment without a license is a violation of the Communications Act of 1934. That it could subject the operator to fine or imprisonment, as well as an seizure of any non-certified radio transmitting equipment. Monetary forfeitures normally range from $7,500 to $10,000. (FCC, RAIN)

## THE BPL FIGHT:  IT MAY BE COMING TO SO. CAL.

A heads up warning to hams living in the California counties of Los Angeles, San Diego and Riverside.  According to ARRL officials in the Southwestern Division, Broadband over Powerline may be coming your way.

Writing in the latest issue of the division electronic newsletter, Director Art Goddard, W-6-X-D, and Vice Director Tuck Miller, N-ed-6-T, say that power companies in these areas may be considering BPL as a new business venture.  The two officials add that the regions Amateur community needs to work together to see if they can head off these B-P-L flirtations before they become entrenched on the ham radio bands.

The report goes on to say that local ARRL Section Managers are already on top of the situation. The S-M's are reportedly forming Local Action Teams to work on all levels in handling the B-P-L threat to the area.  (ARRL Southweestern Divisioon Communicator)

## OPERATIONAL NEWS:  TO PL OR NOT TO PL - THATS THE SERA QUESTION

Repeaters in eight states and the hams that operate through them may soon face mandatory use of continuous tone coded squelch.  Then again, they may not.  Amateur Radio Newslines Gary Pearce, KN4AQ, is in Raleigh, North Carolina, trying to sort it all out:

--

SERA, the SouthEastern Repeater Association, ignitied a furious debate when its Board of Directors voted to require the use of tone as a condition for frequency coordination for all repeaters in its territory.  SERA is the frequency coordinating group for eight southeastern states:  Georgia, Kentucky, Mississippi, North and South Carolina,| Tennessee, and parts of  Virginia and West Virginia.

The SERA Board voted at its June meeting that some form of tone access will be a condition of coordination for all new repeaters effective immediately.  Existing repeaters will need to adopt tone within two years, by July 2006. The board was acting on a motion by Steve Grantham AA5SG, the Director from Mississippi. The goal of the policy was to reduce the number of complaints that SERA coordinators receive from repeater owners whose carrier access repeaters are keyed up by users of a co-channel neighbor.

In discussion at the meeting, the new policy was softened some when coordinators asked if this meant that repeaters would be automatically decoordinated if they decided not to use tone. The answer, according to an article in SERA's magazine the Repeater Journal, was "no, but…" SERA would not entertain an interference complaint from repeater owners who remained carrier access.

The debate began in earnest when the August issue of the Repeater Journal began arriving and the ARRL published a story about it on their web site. Repeater owners argued the merits of tone itself, along with complaints that SERA didn't poll its members, and non-member repeaters, before making the decision.

The decision may not be final, according to SERA President Roger Gregory W4WRG:

--

Gregory: I've received, and we have received a lot of comments pro and con about this policy. And all I can say right now is that we're taking a second look at it and it's not really written in stone at this time as to what kind of decision we're going to make one way or the other."

--

SERA's next Board meeting takes place in January, but the group can reach an earlier decision at any time through an e-mail ballot.

Reporting for Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

So will the hams in SERA coordinated states have to use tone access on every repeater? Right now, the answer seems up in the air.
(KN4AQ, ARNewsline(tm))

**

## HAM RADIO IN SPACE:  ISS GOES CROSS-BAND REPEAT

Speaking of repeaters. there's a new cross-band F-M system in space
and its home is on the International Space Station. This, as the ARISS program announces that the amateur radio equipment aboard the orbiting outpost is now on the air in repeater mode.

The downlink frequency remains 145.80 MHz. The new uplink frequency is 437.80 MHz and all frequencies are subject to Doppler shifting.

ARISS leaders say that they realize that many hams will miss the packet station that the cross-band F-M voice repeater replaces. Burt the groups leaders say that the cross-band repeater will allow further experimentation of the ISS amateur radio system.

For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website, http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf  (ARISS)

**

## RADIO LAW:  FCC ADOPTS RULES TO ENHANCE NETWORK OUTAGE REPORTING

Back on mother Earth in Washington, the Federal Communications Commission has adopted new rules requiring wireless, wireline, cable, and satellite telecommunications providers to report information about significant disruptions or outages to their systems to the Commission. The FCC says that these reports must be filed electronically. The Commission also ruled that all sensitive information collected as a result of these new rules will be protected from public disclosure. The full story is on-line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250543A1.doc
(FCC)

**

RADIO LAW:  FCC REDEFINES DTV CONVERSION SCHEDULE

The FCC has also taken steps toward deciding exactly which channels broadcasters will end up with when they switch to digital television.  By unanimous vote, the Commissioners have set up a timetable that will decide by June 2006 which channels people will tune in on to see their favorite programs.  .

FCC chairman Michael Powell says that the vote signals that substantial progress has been made in switching television from its current analog transmission system to digital.  He adds that the national dialogue has shifted from wondering if the DTV transition would ever end to exploring when it should end.  (FCC)

**

RADIO LAW:  CANADIAN GROUPS CHARGE THAT HD RADIO WILL HARM RECEPTION

Meantime, Canada charges that High Definition or Hi Fi digital Radio will harm reception of Canadian stations inside its own border.  At least that's the headline from the August 30, 2004 edition of Inside Radio.

According to the story that follows, both the Canadian Boadcasting Corporation and the Canadian Association of Broadcasters have asked the country's technical regulatory agency to protest iBiquity's In-Band On-Channel digital radio system.  They allege harmful effects on current A-M reception, especially during nighttime hours.  The whole story is on-line at  http://tinyurl.com/6uubn and www.insideradio.com  (CGC)

**

HAM AWARDS:  THE RCC IS BACK AND ITS FREE

Some good news.  The Rag Chewers Club or R-C-C award is back, but it will not be sponsored by the American Radio Relay League.  Bill Pasternak, WA6ITF, has the details:

--

Its the Society for the Preservation of Amateur Radio -- better known by the acronym SPAR that will be sponsoring the new R-C-C. The group has announced that as of September 1st it will adnminister this fun award and will do so following the old ARRL rules.

According to SPAR, all a ham has to do to get an R-C-C is to present evidence of having had an actual one on one Q-S-O that lasted at least 30 minutes. The QSO can be made on any legal amateur frequency.

In early 2004 the ARRL announced it was discontinuing the Rag Chewers' Club Award due to a lack of interest. Conversations SPAR held with hams seemed to indicate that the lack of interest was due mainly to the cost of the award. So SPAR says that the award will be available free of charge to all licensed radio amateurs.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in
Los
Angeles. Jim.

--

All certificates will be distributed by e-mail as Adobe P-D-F files that you can print and frame. The awards are numbered and endorseable by mode. Complete rules and an on-line application are on the SPAR website at www.spar-hams.org. (SPAR, QRZ.com)

**

NAMES IN THE NEWS: HAPPY 104 BIRTHDAY TO KJ6KQ

And less we forget, a belated birthday greeting goes out to Bill Diaper, KJ6KQ who turned 104 on August 12th. That's right, we
said
104, and probably making him the oldest living radio amateur in the United States, if not the world.

According to a posting on the Q-R-Zed dot com by Tom Ferguson, N6SSQ, website, Bill is a member of the Pacific Amateur Radio Guild and these days resides in the Masonic Homes in Union City, California. Tom says that there is a radio shack in the basement that Bill used up till a year ago but is very difficult for him to access now. That's because the station is in the basement next to the laundry room.  Bill says it is dark and damp down there and must get assistance to get there and have someone tune and adjust the frequency on the rig for him.

N6SSQ adds that the Pacific Amateur Radio sent Bill a flurry of letters and cards on his birthday and that he was very pleased to get them.  (QRZ.com)

## HAM FAIR JAPAN ATTRACTS 30000 ATTENDEES

Turning to the ham radio social scene, Japan's largest hamfest, the JAIA Ham Fair, was held the weekend of August 21st and 22nd.  The venue was Tokyo's Big Sight International Convention Center.  Among the highlights of gear being shown were Yaesu and Icom both showcasing their high end $10,000 H-F transceivers.  Kenwood did not match in the super high end radio category but had a well attend ongoing demonstration of their ARCP-480 Radio Control Program.

But the manufacturers and dealers were only a small part of the show.  Over 170 radio clubs also had booth space at the show.  These ranged from large organizations like JAMSAT, the Japan Shortwave Club, and SEANET down to local organizations who use their booth for flea market sales.

Also present were a wide variety of organizations promoting every aspect of Amateur Radio. This included mountain-topping operators, microwave activity enthusiasts and antenna construction experimenters. Operations represented included facsimile, SSTV, ATV, RTTY, 10M FM, 6 Meters, CW devotees, QRP, homebrewing, classic rigs, military surplus and even a contingent from the A-M community.

Ham Fair is Japan's largest annual gathering of radio amateurs from
the Pacific Rim. An estimated 25,000 to 30,000 attended this years event. (WIA News)

**

THE SOCIAL SCENE: WSWSS 2004 FALL CONFERENCE IN FRESNO CA

Back on this side of the Pacific, the Western States Weak Signal Society tenth annual VHF and UHF Conference takes place Saturday, October 9th. The venue is the M2 Antenna System Facility, at 4402 N. Selland Ave in Fresno, California. Registration starts at 8 AM with the conference program slated to begin at 9 AM. For more information write to David Peters, KI6FF, 14291 Middletown Lane, Westminster, California, 92683. You can also e-mail David to ki6ff@juno.com (VHF Reflector)

**

HAM RADIO BUSINESS: OAL NO LONGER REPPING DEM

In news from the ham radio business world, David Clingerman, W-6-O-A-L says over the V-H-F Reflector that his company known as the Olde Antenna Lab of Denver, Colorado is no longer representing Down East Microwave, Inc. Dave says to please refer your help questions, pricing information and orders directly to Down East Microwave in New Jersey. (VHF Reflector)

**

HAM RADIO NEAR SPACE: UK BALLOON LAUNCH LICENSED FOR SEPT. 12

G3ZHI reports that a license has been granted for a United Kingdom high altitude ham radio balloon flight. The project is now authorized for operation on 2.500 GHz on Sunday, September 12th. The license has special permission to operate at up to 50,000 feet instead of the usual flight ceiling of 2,000 or 5,000 feet.

The launch is scheduled to take place at about 1.30. Plans are still afoot to relay pictures via the new 13 centimeter GB3FT repeater if the system is completed and on the air in time for the flight. More information on this experiment as it becomes available. (G3ZHI)

**

WORLDBEAT - UK:: NEW RSGB ON -LINE

There's a new ham radio promotional video out and it has a definitely
British flair. And in an effort to help to promote amateur radio, the recently-created Essex Amateur Radio Club has started streaming the new RSGB video "What is Amateur Radio" on the Internet.

The Essex group is providing it at speeds of 26 kb and 57 kb so it can be viewed by those using dial-up as well as broadband. If you want to take a peak it is available in cyberspace at www.essexamateurradio.org.uk (RSGB)

**

WORLDBEAT - NORWAY: HACKER DEFEATS AIRPORT EXPRESS

Meantime on the European mainland the same Norwegian hacker known for developing D-V-D encryption-cracking software has apparently struck again. This time his target is the security system that protects Apple Computer's wireless music streaming technology.

Jon Johansen has released a hacking system on his website that provides a key to unlock the encryption Apple uses for its AirPort Express. The unit lets users broadcast digital music from Apple's on-line iTunes Music Store on a stereo that's not plugged into an Apple computer. This permits other software applications from competitors to work with the propriioritary AirPort Express codec. Apple is reportedly considering taking legal action in the case. (Published reports)

**

## RADIOSPORTS: HOST STILL NEEDED FOR 2005 ARDF GAMES

Turning to the world of radiosports, a reminder from Joe Mell, KZ0OV, that a group is still meeded to host the fifth U-S-A Amateur Radio Direction Finding Championship games. This, in the summer of 2005.

Some prerequisites for being the host include having suitable sites for 2 meter and 80 meter hunts along with the ability to provide foxhunting courses. There are also the organizational aspects to consider. These include providing registration services, housing for the contestants, meeting rooms, transportation to and from the hunt areas and lots more.

If your club is interested in hosting this event, please contact Joe by e-mail before September 15th to homingin@aol.com. Full details about the games and how to become the 2005 host is on line at www.homingin.com (ARNewsline(tm))

**

## DX

In D-X, word that K3GV portable VY2 is active on 15 and 20 meters as from Prince Edward through the 12th of September. The island counts as NA-029 for the RSGB Islands on the Air award program. QSL's go to K3GV at his callbook address. (RSGB)

And while this is short notice, the All Asian SSB contest will take place beginning at 00.01 U-T-C on Saturday, September 4th and will run for 48 hours. Operation is on 160 through 10 meters with stations in Asia trying to work the rest of the world. The official exchange for this one is a signal report and the operator's age. (WIA News)

**

## THAT FINAL ITEM: NRC MEETS IN BATAVIA NY

And finally this week, a big meeting of broadcast band SWL's is taking place as we go to air. Here's Fred Vobbe, W8HDU, with the details:

--

Audio report only.  Download the newscast at www.arnerwsline.org

--

Fred has promised to be here net week with a full wrap-up on this years gathering.  (W8HDU)

**

>>
Also what is the "2" in ND2 all about, I can't see
any difference day and night?
>>

It is common, now, to file for ND2 or DA-2 even though the desired mode is actually ND1 or DA-1.

That way, if one mode proofs OK, yet the other mode doesn't, there are more options available.

In theory, one could refile for ND1 or DA-1, but that's another Form 301, another big check to the consultant and another big check to the communications attorney, and ... in short ... a waste of money.

In the days before dial-a-power, ND2 made some sense for the case where a station could, say, make 1 kW work days, but just missed 1 kW nights, and it didn't want to refile for 1 kW-D, 0.5 kW-N.

So ... 1 kW-D and no resistor, and 1 kW-N with a resistor, simulating a less efficient radiator, was a possibility.

Today ... 1 kW-D and 0.82 kW-N might be one possible example, for a station
with  225 degree stick, which is required to radiate no more than the Class B
minimum efficiency with 1 kW at night.

I think San Diego's ex-KDB (or was it ex-KGB ... both are historic calls in
SoCal) is operated similarly to this.

Uhhhhhh.... yes?

BTY, newsgroup(s), remember that although an AM tower radiates
completely, the current distribution on the tower is max at the base
of the most common US towers (1/4 wavelength). The voltage max is
about halfway up the tower. So .... ..... .....

I know many transmitter engineers, AM & TV, that had cancer-type
diseases as they retired.

And as far as trusting the government reports on NIEMR, would this be
the same government that (a) gave all the broadcast stations to big
corporate donors, or (b) told all rescue workers at the WTC that the
air was safe, or (c) found huge piles of WMD in Iraq?

As much as I used to enjoy shortwave listening, the times have changed. Much of the unserved land mass you mentioned is now covered by Canada's domestic satellite radio and  TV services.  You're worrying about one

shortwave signal while rural families are snuggled in their homes tuning in
CBC radio and TV, CTV and even TV Land.

Really? FM quality means a S/N ratio of at least 65dB and
and no more than 1% peak distortion, most of it low
harmonic. This requires even with the best digital codecs
at least 96 kb/sec, and probably a bit more (for stereo,
of course .... for mono the FM S/N level should be set
at more like 75 dB.)

What is the bandwidth of these digital signals that get
96 kb/sec?

It's really very easy to maintain a limited spot load -- when you sell out, you raise your rates to the point where you're not quite sold out...and keep doing that, over and over. This has the added benefit of driving marginal businesses and slow-paying accounts off your station and onto your cheaper competition. Salespeople make more money with less work. Everybody wins. Once upon a time most successful stations did this. Yes, you have to cut rates in slack periods, but if managed correctly the overall trend is always up.

But then came the entrance of the huge publicly-traded corporations, and Wall Street demands for revenue and cash flow increases that wildly exceeded the rate of economic growth. I know of one major company that insisted on 15% annual cash flow increases in a region with 2% economic growth. This is not sustainable for more than one or two quarters. But without such numbers, the stock would get hammered. And some managers, such as one recently departed major figure whose name will go unmentioned here, were so focused on the immediate quarterly numbers that they simply refused to consider the long-term impact on the industry. Somehow we forgot concepts like demand-based pricing (a staple of the travel industry for decades) and grid rate cards.

If it takes a Clear Channel to get the industry to wake up, then so be it. The downside is that a lot of people will pay for this with their jobs, as I'm sure short-term cash flow budgets won't change and the cost-cutting that results will be brutal.

For sale:

Partial ownership in small market AM daytimer in small Alabama city. It is the county seat. 1 KW, non-directional.

(The "Radio Crazy" is loose again! Run for the hills!)

This is a joint venture. Venture out and you go to the joint! Just teasing. There is an element of risk and you could lose all or part of your investment. That part is dead serious! Legal disclaimer.

Active or inactive investors with at least $5,000 each are welcome. All investors would be on the board with full voting rights if desired. No investor can hold over 49 percent. This means me too!

Station has been on the air since 1949.

Tel: (478)741-1710 in Macon, GA.

I spent 20 years in New York and recall the WFAN signal was one of the
worst. I was in the West Village by the river and could barely receive
it. I couldn't receive it in my office at WOR in Times Square.

I get it better in New England than in NYC.

Do yourself a favor and be careful who you call an imbecile. I see one of those imbeciles got you to believe that there's such a thing as a "right" to health care.

I pored over our Constitution from beginning to end...you know, that document which is our fundamental and supreme law...the one which delineates the rights of the people and the limits on the powers of government. It's a strange thing, but nowhere in that document did I find any "right" to health care. Did this "right" get invented when I was asleep one night, or is this just another ploy to get the US government involved in something it should keep its grubby paws out of, lest it make the usual mess it makes out of everything else it touches (while spending OUR money to make that mess)?

You mean cross posting imbeciles like you.

The Republican convention was very positive. The only negatives were the
reported contrast of the Democratic candidates Senate record. Not much
can be done about that except vote Kerry out of office.

congrats to Bell South...
my ISDN broadcast line for my network show (www.nationalradionetwork.com)
stayed up....
and of my two regular lines...only one went down and it's back.
well done Bell South.
Wish I could say the same for the power company...FPL sucks big time!

Sid ...

<<This is hysterically funny.  The host of a syndicated show issuing a press release saying that there are fewer jobs for disc jockeys...when HE and those like him are the reason.

Best laugh I've had all week.>>

That's the point I was trying to make when I responded to the same (cross)posting in alt.radio.broadcasting with this comment:

Perhaps if there were fewer people doing syndicated radio shows there might be more jobs for local disk jockeys.

Lee

You can't even imagine how many Americans are also glad that you don't
live in the US.

> Microwaves, also known as Super High Frequency (SHF) signals, have wavelengths
> approximately in the range of 30 cm (1 GHz) to 1 mm (300 GHz).

This is a pathetic attempt to avoid the real issue and turn the argument another way to avoid the statement they were unable to dispute.

Saying microwaves magically start at 1000 Mhz, and saying 999 Mhz is not, and 800 Mhz is not, is bullshit talk.

Regardless of where you want to call it, the FACT remains that Microwave Ovens were manufactured that cooked your food with frequencies in the 800 Mhz region.

So, since we can cook food and heat at 800 Mhz, and since cell phones are using the same frequency range, we can make a definite connection here.

Any attempt to shift the discussion to one about where we now want to classify the word "microwaves" to be appropriate is just childish and ignorant, and nothing more than diversion from the point about cell phones being dangerous.

LEGAL exposure to certain RF in Russia can be different than the LEGAL limits in the US.   As if RF follows any of these laws, or as if a cell phone is not going to harm you just because you change the definition of what can be legally called microwaves.

What was considered low blood pressure a decade ago, is now being called high blood pressure in an attempt to sell more medication and make more money.    Just the AMA changing the imaginary boundary line did not make us all suddenly have high blood pressure, just as your changing what is now considered microwaves has no effect on this issue either.

> ------------------------------------------------------------------------------
> If there's nothing that offends you in your community, then you know you're not
> living in a free society.

If there is nothing that offends you in your community, then you ALSO know you're not living in a dictatorship either.

This is a stupid play on words that is meaningless!

You can NEVER have any society in which nothing offends anyone!    Not under ANY government.

Idiots.

Three things:

1) You need to recheck the frequency of the magnetrons in microwave ovens.
2) You need to recompare the power levels between microwave ovens and cell phones (*cough* 0.3 W v. 1500 W, a factor of 5000 difference *cough*)
3) *Plonk*

effect on
> this issue either.

since the dawn if time he earth has been drenched in radio waves and
radiation. since the advent of electromagnetic telecommunications and power
grid distribution mans lifespan has dramatically increased.  therefore radio
waves are good for you.

There are people using cell phones now that have been using them for more
than 20 years in Japan. How long do you think it will take for the epidemic
to show up?
```

> don't listen, no one hears the spots.

No shit.    And if you have too many spots, all you have to do is double the price.
Half of the advertisers will drop, the other half will pay their share, and you just

cut half of the spots from your station. So simple, yet many are too afraid to turn down any advertiser to do it. We did it and it works just fine. Better to turn away advertisers than listeners! If you have listeners, you will always have advertisers, but you don't get listeners from having more advertisers, you get LESS listeners.

> Now that I am a listener, I am one of the first to turn away from a station
> that plays too many spots, especially if the spots are totally uncreative,
> boring and repetitive.

This is the problem with those in radio management, they never just ask themselves what THEY would listen to. All you had to do is ask the DJs what they thought, as they are the ones that listen to the station longer than anyone. If they get sick of a song or spot, it means time to drop it!

> Sometimes stations play the same spot twice during a
> single set! How effective can that be to that customer?

I never understood that. If I was the advertiser, I would much rather have had the extra spot play in another hour or on another station than waste two in the same break. Besides, it pisses listeners off, and doing that means people will remember to NOT buy your product, just as they never buy from companies that send spam or telemarket.

> Radio has become ridiculously redundant.

Haven't been able to listen to it in many years.

Wow, someone else finally figured this out.    Good for you.    People I would explain this simple logic to, would be too afraid to try it because they never want to lose any advertiser and would rather have lots of advertisers and spots and low pay, than a few advertisers paying a lot more.

Problem is, if you are programming shit, you can only charge $5 a spot.

FIRST you get good programming.   THEN you have a small sales staff of 3 or 4 people to handle incoming calls from Budweiser, McDonalds, etc.     If you have to go out and get advertisers, then your programming sucks.

In Chicago, when WBBM flipped to all-news, they had the teletype sound in the background, which always went on when the news anchor opened their mike, even during "CBS Mystery Theater."  When Westinghouse took over WMAQ and flipped to their "You Give Us 22 Minutes..." concept of all-news, complete with the teletype, 'BBM dumped the teletype.  In the early 90s, when they decided to push their CNN affiliation during the first Gulf War, 'MAQ dumped the teletype and all of the trappings of the Group W all-news format and stayed that way until the station met its demise a few years ago at the hands of The Score.

IBOC -- a way to jam skywave signals from Mexico and Canada at night, just like the USSR did with VOA, RFE/RL, ...

The US AM band is so heavily overallocated already to meet the classical cold war definition of jamming, with respect to being able to hear stations in Canada during nighttime hours (no Canadian station operates at 50 kW at night that I am aware of).

Mark Jeffries <uncamark41@hotmail.com> had written:
|
| It's not just modern rockers--burying the legal in the :50 stop set is
| common in *every* music format (it seems that talk radio still
| believes in call letters over image name).  Either that or whispering
| what they don't really want you to hear like this example:  [...]

I guess the San Francisco Bay area is a little different...KOIT,
KFRC, KDFC, KBLX, KFOG, and KMEL are all examples of music stations
that continue to identify with their call letters. Until its
```

makeover as "The Bone" about four years ago, KSAN did as well.

Back when KITS still was owned by Entercom, running a true modern rock format, it only announced the call letters once per hour. But when they did it, it was not hidden. My favorite was (in alternating left and right channels) "K -- I -- T -- S" followed by an equally dragged-out "San Francisco! Live! 105!"

The present-day Live 105 has none of the imagination and flair of what came before it. Yet another consultant-whipped PD strikes again.

| Just think--all you needed in the old days was a tymp roll, Bill Drake
| saying "And now, ladies and gentlemen, the Real Don Steele--on Boss
| Radio!" and the Johnny Mann Singers singing "93 KHJ--Los Angeles!"
| And all of that at the top of the hour.  Guess times have changed.

Music stations also didn't hate news in those days. It was viewed as a complementary part of the format. Try to imagine "The Big 89" (WLS) without Lyle Dean.

```

The big change came with the digital dial. You can not be "93" anymore, you must be 930. In some formats, especially in youth and younger adults, up to 80% of Arbitron diary mentions are by digital dial position. The next group is by name, and the lowest by calls.

I got Sirius Satellite Radio installed in my car on Monday at Circuit City.  The guy working in the garage told me that, instead of mounting the antenna on the roof of the car, he was going to mount it on the dashboard.  He told me that by doing so, he was doing me a favor because if he mounted the antenna on the roof, it would rip off the paint if I ever wanted to remove it, and that you get the same reception with it mounted on the dashboard anyway.

Since Monday, I've noticed that the signal has been less than stellar in many parts of town.  I'm getting a lot of mild static, which is especially noticable on the talk stations.  I've tried playing with the frequencies to no avail.

I'm wondering if the Circuit City technician was feeding me a line of BS in order to save himself some work.  Can anyone offer any advice or information on this? Never having had satellite radio in my car before, I don't have anything to compare the signal to, in order to know if this is how it should sound or not.

Thanks.

Amateur Radio Newsline™ Report 1410 - August 20, 2004

Amateur Radio Newsline report number 1410 with a release date of Friday, August 20th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is ready as Hurricane Charley comes ashore. Find out the details on Amateur Radio Newsline report number 1410 coming your way right now.

(Billboard Cart Here)

**

## RESCUE RADIO:  HAM RADIO AND HURRICANE CHARLEY

Packing 145-mile per hour winds Hurricane Charley slammed into west-central Florida, ravaging oceanfront homes and trailer parks, tearing apart small planes and inundating the coast. More than a half million customers were left without power or telephone service statewide. Damage was especially heavy in downtown Punta Gorda on Charlotte Harbor. Warren Elly, W1GUD, is a Tampa based TV reporter sent to cover the aftermath of Charley coming on shore:

--

Audio report only.  Hear it in mp3 audio in the current newscast posted at http://www.arnewsline.org/quincy

--

Warren's report was filed early Monday the 16th.  Since then President George Bush has declared some sections of Florida as a major disaster area.  His brother, Florida Governor Jeb Bush, projected damage from Charley could exceed 15 billion dollars, but that estimate was preliminary.  (ARNewsline(tm))

**

## RESCUE RADIO RULES:  FCC CLARIFIES EMERGENCY DECLARATIONS

The FCC has issued what amounts to a white paper to clarify the rules hams must follow when providing communications during an emergency. Amateur Radio Newsline's Mark Abramowicz, NT3V, is here to sort it all out:

--

With the hurricane season upon us and wildfires and other severe weather hitting various parts of the nation, the Federal Communications

Commission believes now is the time for a clarification on Emergency Communications Declarations.

What is an Emergency Communications Declaration or ECD?

When a natural disaster or accident interrupts or disrupts normal communications systems in a particular area, the FCC - at the request of emergency management officials or an amateur radio operator acting on behalf of emergency officials - issues an Emergency Communications Declaration.

Essentially, the order defines special conditions and special rules to be followed by amateur radio stations providing service during the communications emergency in that particular area.

The FCC says occasionally, it receives requests for Emergency Communications Declarations before a hurricane or tropical storm hits. The FCC says such requests generally arrive anywhere from 24 to 72 hours in advance of weather predictions citing potential damage to a particular area.

But under Section 97.401(a), emergency communications before an event CAN be established to meet essential needs of a community or to help prepare relief activities. The commission acknowledges preparations to meet a disaster may overload or damage normal communications systems so it allows amateur stations to make emergency transmissions at any time prior to or even during a disaster.

In essence, the FCC says there's no need for an ECD because the actual event disrupting communications has not occurred.

So, the FCC says such declarations WILL NOT be issued until AFTER the disaster disrupts normal communications in a geographic area subject to FCC regulation.

Speaking of emergencies, it doesn't necessarily have to be a weather-related incident, as we found on September 11, 2001. It can also be a transportation accident such as a railroad incident or a fire or explosion.

Whatever the emergency, once communications are disrupted, the FCC says there are only two sources from which it will accept an application for an ECD. The first is an emergency management official responsible for communications in the affected area. The second is an amateur radio operator acting at the request of an emergency management official.

The FCC says such applications must contain very specific information such as:

- The date the event has taken place.
- The nature of the disaster.
- A description of the communications system disrupted and a contact person who can verify the damage.
- The geographic area affected - city, county, state or region.
- Listing of the VHF/UHF, MF or HF frequencies to be used during the emergency.
- An estimated time the disruption of normal communications is expected to last.

The FCC says an Emergency Communications Declaration will contain an expiration date. However, the commission says that date can be extended at the request of the emergency official or authorized party making the original request.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The FCC's Communications and Crisis Management Center is the place where Emergency Communications Declaration requests are sent.  You can reach them by phone at 202-418-1122, that's 202-418-1122.  FAX requests are handled at 202-418-2813, 202-418-2813. Or, you can make the filing by e-mail to comm(hyphen)ctr@fcc.gov. (ARNewsline (tm))

**

## EMERGING TECHNOLOGY: AUTOMATING EMERGENCY ALERTS

A new technology soon to debut in 12 states will significantly extend Amber alerts, reaching cell phones, e-mail and handheld computers. It could also be used to transmit weather and terrorism alerts.

According to news reports the system uses a simple broadcast technology that takes the information from a Web portal and reconfigures it for different types of broadcast. By way of example, a state department of transportation might receive it in one format for its road signs and another for its information number.

More important, people with cell phones can sign up to receive Amber alerts with their local county or with state authorities. The text of an alert can be sent immediately to local TV news stations and Web sites.

## RADIO RULES: INTERNET LINKING IN THE UK

Telecommunications regulators are about to make ham radio internet linking a lot easier on the other side of the Atlantic. This, as Ofcom which is the U-K equivalent of our FCC issues new and more liberalized rules. RSGB news presenter Jeramy Boot, G4NJH, has more:

--

Ofcom has announced the decisions it has taken about changes to the procedure and terms of issuing Notices of Variation (NoV) for Internet Linking Gateways.

Ofcom proposes to pass the Internet-linking NoV process to the RSGB to issue NoVs on behalf of Ofcom. The RSGB will be announcing procedures for NoV renewal shortly and queries on the renewal process should be directed to the Society.

Ofcom's decisions were made following the notification of four proposals which gave those holding an NoV the opportunity to make representations.

Jeramy Boot, G4NJH, in Nottingham.

--

For those interested the complete set of new U K Internet linking rules is on line at http://tinyurl.com/4LE8P (GB2RS)

**

## RADIO RULES: VANITY FEE REMINDER

Back here in the USA, a reminder from the FCC that the new Amateur Radio vanity call sign fee of $20.80 for the 10-year license term became effective on Tuesday, August 10th. Not on Friday, August 6 as we and and others had announced.

The reason for the last minute change? A management-level staffer in the FCC's Office of Managing Director explained to the ARRL that the Commission was not necessarily bound by the August 6 effective date The Federal Register indicates. That date was 30 days after publication of the order containing the new fee schedule. (ARRL, FCC)

**

ENFORCEMENT: NO LICENSE - STAY OFF THE AIR

Meantime the FCC has written to a pair of unlicensed operators telling them to stay off the air. The agency's Daryl Duckworth, NNZ0W, explains:

--

Duckworth: A warning notice went to Rick Shepherd of Crescent City, California for unlicensed operation on 146.515 MHz along the Oregon/California border aboard the fishing vessel Sunset.

David Shoemaker of Sebina, Ohio, also apparently not in the FCC Licensing Database was issued a warning notice for unlicensed operation from a vehicle with license plates registered in his name. The transmissions were on 28.085 MHz near the intersection of I-71 and U.S. 36.

--

Shepherd and Shoemaker were both told that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934. They were also informed that continued operation could lead to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment that they own.

Monetary forfeitures for unlicensed operation normally range from $7,500 to $10,000. (FCC, RAIN)

**

## RADIO RULINGS: FCC PERMITS SAN JOSE STATION TO BUILD SAN FRANSCISCO TRANSMITTER

The San Franscisco Chronicle reports that thousands of people in and around San Francisco will be able to watch NBC television over the air again. This, courtesy of a Federal Communications Commission ruling on Thursday, August 12th, that will let KNTV build a new transmitter to cover the area.

According to the news story, the San Jose based station will be permitted to construct a new transmitter atop San Bruno Mountain which overlooks San Francisco. The station claims this site will reach 400,000 people who lost service when KNTV became the Bay Area's NBC affiliate in 2001. (FCC, San Franscisco Chronicle and other published news stories)

**

## NAMES IN THE NEWS: ANOTHER OPERATION FROM IRAQ

Even as the military action in Iraq continues another ham radio stAtion has come on the air from that war torn region. This, word that Ryszard Nowakowski, SP8HKT has been licensed to operate as YI9KT.

Ryszard will be there for five months. He uses a 100 watt radio into a vertical antenna on all bands from 40 to 10 meters. He operates mostly on C-W but will come onto SSB if you make the request. (GB2RS)

**

## NAMES IN THE NEWS:  NEW QCWA OFFICERS ELECTED

Former FCC rules man John B. Johnston, W3BE, is the new President of the Quarter Century Wireless Association.  Also elected are Vice-President Bob Roske, NOUF: Secretary Alan Pickering, KJ9N and Treasurer Frank Harris,  WA4PAM

Elected to serve as QCWA Directors are Tom Atkins, VE3CDM: Harold Chase, W1EES: Lew Gordon, K4VX: Jerrel Jones, W5TUU; Ray Minichello, W1BC: Len Nathanson, W8RC: Blanche Randles, W4GXZ, and Ed Yoder W3YMB.

Both Gordon and Nathanson are former Directors of the ARRL.  2307 QCWA members returned ballots in this years election.  (QCWA)

**

## EVENTS:  2004 QCWA NATIONAL CONVENTION IN OTTAWA

And speaking about the QCWA. word that the organization will hold its 2004 international convention in Canada.  The dates are October 15th through the 17th at the Lord Elgin Hotel in Ottawa.

This years gathering is hosted by the National Capital Chapter 70. More information is on line at www.qcwa.org/2004convention.htm  (QCWA)

## ON THE NET: LINUX CONTINUES TO GROW

The use of the Linux operating system especially among experimenters including ham radio operators is quietly growing. One in five servers sold last year to handle Internet traffic and corporate networks ran on Linux.

Observers say that the economic downturn may be responsible for the Linux move. The Linux operating system was created as the people's software, free and open for everyone to use in an attempt to thwart the commercialization of all Internet technology. Amateur radio was among tgher first to truly embrace it and may ham radio applications are written for Linux based operation. (Published news reports)

**

## HAM RADIO IN SPACE: NASA CELEBRATES ISS AT MARINA AIR FAIRE

Scott Avery, WA6LIE, reports over the AMSAT mailing list that NASA will have a booth set up at the Marina Air Faire in Marina, California on October 16th. Scott says that the plan is to make a live I-S-S voice contact and to also have a video of Q-S-O's made with the space station playing for passers by to see. Scott adds that any help in getting video files of school contacts with the I-S-S would be appreciated. For more information please contact him by e-mail to wa6lie@msn.com (WA6LIE)

**

## WORLDBEAT: LIGHTHOUSES OF AUSTRALIA 2004 ANNUAL DINNER WEEKEND

Turning to news from around the world, word that this year's Lighthouses of Australia Dinner will be held in Launceston, Tasmania Saturday, October 2nd. The dinner will include a tour to the National Archives Office Exhibition on Australian Lighthouses titled "Beacons by the Sea." Also scheduled is a visit to the Low Head Light and the Pilot Station Maritime Museum also at Low Head the same weekend.  (WIA News)

**

## WORLDBEAT:  RADIO CLUB GETS GRANT TO TEACH THE HOBBY

The Thornton-Cleveleys Amateur Radio Society in the United Kingdom has recently received a grant of close to 5,000 British Pounds.  This, to help in the promotion of amateur radio. Over the past two and a half years the club has held 18 examination classes with 150 passing the U-K Foundation class ham radio license exam.  (GB2RS)

**

## WORLDBEAT: GB4WTA COMMEMORATING THE UK WIRELESS TELEGRAPHY ACT

GB2RS reports that Ted Moore, G7AIR, and members of the Eddystone Users Group will operate as GB4WTA on Sundays and some Saturdays through the 28th of August.  The station commemorates the centenary of the United Kingdoms Wireless Telegraphy Act, which came into effect on the 15th of August 1904.  GB4WTA will operate from Wireless Hill in the Rutland area.  (GB2RS)

**

## DX

In D-X word that K4QD will be QRV August 16 to 27 portable HH4 from. This, from the Northwest Christian Mission in Haiti.  Activity will be on most H-F bands plus 6 meters, using CW and SSB as time permits.

QSL to his home call. (K5SW via VHF Reflector)

And GB6LOP is a special events station that will take to the air to celebrate the 60th Anniversary of the Liberation of Paris during Word War 2. The station will operate on all modes, starting August 25th and will be on for 4 weeks. Your QSL card will be required beforehand in order to receive the special QSL from this station. Please QSL via RSARS QSL Bureau. For further information contact G0SWY by e-mail to G0SWY@aol.com (G0SWY)

And also listen for HS7-B on from Thailand. This special event call sign has been issued to celebrate the Queen's 72nd birthday. The call sign will be in use during any SEA NET activities. QSL via operators' instructions. (RSGB)

**

## THAT FINAL ITEM: THE BIG T-HUNT: HOW THE U.S. NAVY KEEPS TRACK OF EARTH ORBITING SATELLITES

The U.S. Navy has built an exotic radar system to track earth orbiting satellites, and the system has been in place for many years. Now, thanks to a couple of sleuths, details of the Navy's system have been posted on the web. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

The Navy's satellite tracking system appears to consist of multiple transmit and receive sites across the U.S., and one of the receive sites just happens to be located in San Diego County a few miles north of Brown Field. This, according to web-published coordinate data as reported in the CGC Communicator broadcast industry newsletter.

And if think UHF moon bounce antennas have gain, wait until you see the giant array built near Lake Kickapoo, Texas. This two mile long antenna

transmits continuously on 216.98 Mhz with an unmodulated carrier and has
a beamwidth of only 0.02 degrees in one plane. So powerful is the transmitted signal that when the moon passes through the beam, the return echo is said to be detectable on earth with only a dipole antenna
attached to a receiver. Talk about the ultimate E-M-E.

For the Amateur Radio Newsline, Im Bruice Tennant, K6PZW, in Los Angeles.

--

If all this is fascinating and you want to learn more, take your web browser over to:

There are plenty of Canadian stations that run at 50kW.  CKLW in Windsor, for one.
CBU in Vancouver, as well as CBC stations in Regina and Winnepeg, too (although
they've divested themselves of the 740 and 940 kHz operations in Toronto and
Montreal).  There are still quite a few Canadian Clears, although some of those
channels, like 800kHz, are shared with Mexico, and thus run lower power or
directional patterns at night.

>Why not PROVE your ridiculous theory by putting your head into a microwave oven!

I once worked with a guy who claimed he could hear microwaves.  He said that he could tell when the radar system was in operation and when it wasn't by the sound.  We did a simple blind test up on the roof, and it became pretty clear that he could tell.

Turns out that what he was hearing was conducted noise from his skull expanding due to heating effects.  Admittedly this was with well over a megawatt ERP.   But it was definitely being absorbed.

SOME microwave frequencies get absorbed very well by water, some do not.
The body being mostly water, this is as relevant as it is for weather radar.

> before, I don't have anything to compare the signal to, in order to
> know if this is how it should sound or not.

Two questions: First, which Sirius radio did you have installed?  If it's an
FM modulated unit,
you may just be tuned too closely to the frequency of a local (likely NPR or
religious translator) station.
Second, I think the Circuit City tech was feeding you a line.  I've had two
XM radios installed at
Circuit City and both times the antenna was mounted on the roof of the
vehicle near the tail gate -
both are SUV's.  Furthermore, most of the Sirius and XM antenna are magnetic
mount - meaning they
won't harm the paint.

Since both Sirius and XM are digital services, poor signal is really almost
meaningless - it either works fine
or it totally drops the audio altogether due to packet loss.  You really
shouldn't hear "static" unless you have
one of the FM modulated unit and then there's some other RF force at work.

HTH,

Jeremy

Very interesting discussion. Thanks.

How about introducing the masses to franklin antennas, such as the system
still in use at KFBK in Sacramento. I believe KDKA once had one, too. I saw
one in South America that had no real ground system, just the two elements
of the Frnklin and a ground mat at the base.

> centerline -- which includes all angles from below the antenna out to the
> radio horizon; i.e., a "ground" wave.  [Free-space radiation with respect to
> the dipole itself is the same whether its axis is horizontal or vertical.]

H-Pol is used on VHF, such as TV and FM, not because there's no ground wave (which there still isn't) but because, in historical times, the antennas used to receive TV and FM were H-Pol (most still are, if you look around).  However, vhf broadcasters (you know?) have been allowed to used V-Pol (to the limits of the H-Pol authorisation) or elliptical or C-Pol as well since the early 70s, due to the number of portable receivers coming into use at the time whose antennas are, frequently, vertically-oriented.  And while all dipole radiators have the characteristic radiation pattern you describe, this isn't a "ground" wave since there's no bias for radiation along the horizontal plane when the radiator is oriented horizontally - it's only when this radiator is vertical that the omnidirectional radiation perpendicular to the centreline is a "ground" wave, as significantly less power goes skyward, in conformance with your description.  Further, since medium wave radiation has a significantly larger wavelength when compared to the size of the earth, the diffractive effects make for over-the-horizon transmission, further enhancing the phenomena called "ground wave propagation".

> The reason h-pol is not used for MW is because path losses are much higher
> for h-pol than v-pol in that part of the radio spectrum.

And, as noted above, because for the same amount of coverage, more power would be necessary, since well over half of the radiated power goes uselessly skyward.

> > This is why a vertical radiator is sometimes called a "ground plane"

> cannot be met without using a good ground system.

Right....but how is this information inconsistent with my description, which is to
say that a vertical radiator needs a ground plane?  You also fail to note that the
rules specify different minimum efficiencies for differring antenna lengths.

> > Those familiar with 11-meter Citizens Band know this antenna

> Possibly more important is the point that drooping the radials also tends to
> lower the angle of maximum radiation, which can improve field strength for
> receiving antenna sites at/near ground level.

Perhaps.  But isn't it interesting that the angle selected is the same angle as
what
produces a 50-ohm impedance?   If the effect were more pronounced at a different
angle, one would think that that angle would be preferred, and then using a
matching
network, bring it back to 50 ohms.  Of course, there would be some loss in that
network, which might overwhelm the additional advantage gained by dragging down
the
lobe.

> > The nice thing about the low radiating impedance of a vertical radiator is

> the opposite of the above quote statement.

> The ground wave field strength of a MW vertical radiator per kilowatt of
> input power is related only to the current distribution in the radiator, not
> its base impedance.  Whatever the base impedance is, it can be matched to 50
> ohm line at the tower base, using the right network. But the network doesn't
> affect the relative field radiation pattern of that radiator.

But....I've seen (and fortunately NOT had to deal with) antenna systems with very
high base impedances (one, if my memory serves me correctly, was 800 ohms!  Not
much

current, but do the math...any appreciable power, like 3 or 4 kW, and there's a real danger of getting tangled in with some pretty high voltages). While it's not a scientific survey, I can tell you that those systems, watt-for-watt, perform worse than lower impedance systems, and that's not even counting the difficulties in having 1kV base voltages!

And it's more than just current distribution that affects efficiencies. It's the integral of the loop currents, which is why your chart shows better efficiencies for those taller radiators. The larger fields generated by the longer radiators makes for more power transferred (which also explains why a taller radiator has a higher intrinsic impedance, as you have above, so 1kW into a 90 degree stick will be about half as effective as a 180 degree stick (actually, shy of twice, due to the I-squared-R losses you mention..

```

> ground system becomes a bigger percentage of the resistive term of the
> radiators base impedance.

I appreciate the effort and time you've made trying to teach me something about antenna theory, but be assured that there's not much more that need to know, and I sincerely doubt that going into much more detail than this is warranted for this particular thread.

Sirius strongly recommends that the antenna be mounted on the roof (or trunklid if roof is not practical) so as to have the widest possible "view" of the sky. Having said that, Circuit City also installed my antenna inside the vehicle on the rear deck.  My car is a 2000 Nissan Maxima which has an especially raked rear window that gives almost as much of a sky view as placing it on the roof.  I also have a Kenwood Here2Anywhere unit that I use on business trips in the company vehicle which is a Ford Taurus wagon.  I just throw the antenna up on the dash.

In both scenarios, I experience generally fine reception unless I spend more than five seconds under an overpass or I'm driving in an especially wooded area with a thick canopy of trees overhanging the road.  I never get any static.  Either the signal is there full on or it's not--that's the way it is with digital.

If you are getting static with this installation, there can be only two reasons for this IMHO--(1) the installation itself is faulty; or (2) assuming you are using a unit that plays through an FM frequency on the radio, the frequency you are using has a local or strong signal using it.  If (2), you'll need to play through one of the alternate frequencies not so occupied.

Absent that, Circuit City guarantees its work, so I would go back to them and have them correct the problem.

An interesting point aboit IBOC.  Indeed, the AM band is over committed.

Aren't the stations on 740, 940, and 1070 50KW full time?

JB

Among the Clear Channel stations, this stands out like a token black
at a KKK meeting. Given the politics of Clear Channel, I suspect that
KLSD is a piece of black propaganda intended to discredit Democrats,
liberals, and progressives. The call letters are a tip-off. It's like
setting up a fake organization called "Terrorists for Peace" or
"Pedophiles for Sex Education."

Either that, or the FCC has been leaning on Clear Channel about "balance."

Is anyone familiar with these "personalities?" Do they make sense, or are they just a bunch of left wing-nuts trying to balance a bunch of right wing-nuts?

Mike T., Canadian observer fascinated by US politics & media.

You'll get your best answers at the independent Sirius users' forum, www.siriusbackstage.com .

But in my opinion the installer was simply saving himself some work finding a route through the car and underneath the rear window lip.  I actually did the dashboard thing for a few months, taking my complete Sirius setup into the car for longer trips.  It was surprisingly reliable, but the rooftop mount does reduce dropouts.

And the flat rooftop antenna is magnetically attached; the magnet isn't strong enough to pull paint off, but you may dull a newer finish if you're careless with a snow brush, as the antenna grips firmly but goes where you push it.

Does anyone know if and where those great BBC documentaries can be found??
Of the ones that I remember:

Another Five Numbers,
Lating R.I.P,
Footprints,
Animals that Changed the world,
The Lopsided Universe,
Dark Origins of Britain,
Elements of Surprise,
Unearthing Mysteries 2001, 2002
What Remains to be discovered,
World of the Parasite,
Plants of Power,
Beyond Coincidence,
History of Fear,
Emotional Rollercoaster,
Science in High Resolution
Turn on Turn Off
Reinveinting the wheel
Origins of Popular superstitions,
Routes of English
A brief history of timewasting,
Earth Search 1,2
Electronic Brains
Murder Magic and Medicine
Frontiers

I have a 2 hour commute (total) everyday and am constantly looking for nonfiction or instructional audio programs!! HELP!

For sale:

Partial interest in two AM stations under same roof in small Alabama city.

(The "Radio Crazy" is baaaaakkkk!) Hi!

This is a joint venture and there is an element of risk. You could lose all or part of your investment.

Active or inactive investors with a min. of $20,000 each are welcome. All investors would be on the board with full voting rights if desired. No individual can exceed 49 percent. This means me too!

Asking price for the two competing stations (Under one roof) is $250,000 including the main building and the tower land for one of the stations. The other tower site leases for $200.00/month. One AM is a daytimer, the other is fulltime. The fulltime is CQAM AM stereo.

Tel: (478)741-1710 in Macon, GA

You already have the name of my parole officer!!!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy".
aka Moron Gottesman
aka Maven Gottesman

>I'm wondering if the Circuit City technician was feeding me a line of BS in order to save himself some work.<

Of course he was.  Satellite radio is strictly line-of-sight.  Placing metal between the antenna and the satellite guarantees reception problems.

It belongs on the outside of the car.  Period.

Within these hallowed halls, Truth of <yenc@sucks.com> added the
following to the collective conscience:
>> To oversimplify a bit: Low frequencies (like AM broadcast) pass
>> through the body without being absorbed. Microwave frequencies
>> bounce off the body without being absorbed.
>
> ROTFFL!!!
>
> Why not PROVE your ridiculous theory by putting your head into a
> microwave oven!
>
> .......yeah.   I didn't think so.

I was actually wondering what this post of yours had to do with
broadcasting.     Even if
it was off topic but informative or entertaining, it would have been better
than just
being a post about being rude to someone.

At medium wave (AM Broadcast) many Class A stations (formerly "clear channel") use antennas of about 190 or 200 degrees tall. The FCC requires a minimum antenna effectiveness for that class which is higher than for the other classes of stations. The base impedance of these sticks near a half-wave tall is going to be pretty high - and all but one US Class A station run 50 kW. One of the factors in deciding AM tower height is to place the first null in the vertical pattern such that the nighttime skywave interferes as little as possible with the ground wave toward the edges of the groundwave coverage.

Of course Class A AM stations are a Big Deal and generally have very good ground systems.

Actually, they did, but by government edict, they had to do it.

> Try to imagine "The Big 89" (WLS) without Lyle Dean.

The better stations elected to do news well, since not doing it was not an option under the regulations then governing the industry.  But most of them were pretty much rip 'n' read operations with no real staffing even then.

Quoth "Mike T." <miket@invalid.net> in news:cgntkf$bia$1@xuxa.iecc.com:

> Among the Clear Channel stations, this stands out like a token black at a KKK meeting.

Not at all. Air America is making money for Clear Channel in the markets where they have tried it (most clearly in Portland OR on KPOJ -- they put it on WINZ in Miami in mid-July, still too early to tell what's happening there), so they are expanding it to several of their other underperforming stations (like KLSD -- stands for Liberal San Diego, despite the obvious double meaning) and WLBY 1290 Ann Arbor, Michigan (short for "libby"). They say they plan on introducing it into two more top 25 markets over the next month, but haven't said where yet.

It may provide them with some political cover as a side benefit, but Clear Channel, like most big corporations, is primarily about Making Money. They see an under-served market and they are determined to serve it.

> Is anyone familiar with these "personalities?"

I've been listening since May to Air America's flagship, WLIB, so I'm familiar with the Air America lineup. Their personalities are genuine, mostly entertaining (for example, Marc Maron has long been one of my favorite political standup comics, and his approach and material fit well on radio; to my mind, Al Franken makes me think of what Arthur Godfrey might have been if he were Jewish; Chuck D is impressive when he's there; Garofalo impresses, but her sidekick Sam Seder usually just annoys me; and Randi Rhodes just KILLS) and make a lot of sense, some more than others. You can sample them yourself no matter where you are; Air America streams both Real Audio and Windows Media at AirAmericaRadio.com

I don't know Ed Schultz (not an Air America personality -- he's syndicated by Jones Network) but I hear that he used to be a little-known conservative talker who intentionally turned

```
himself into a liberal version of Rush Limbaugh so as to stand
out from the crowd.

"Bob Haberkost" wrote these clips:

>The larger fields generated by the longer radiators makes
>for more power transferred (which also explains why a taller
>radiator has a higher intrinsic impedance,

Have to disagree with that. The reason that a 180 degree MW vertical generates a stronger ground wave than a 90 degree vertical (other conditions equal) is due SOLELY to the shape of their respective elevation patterns. Their radiation efficiency or "power transferred" has nothing to do with their base impedances.

If properly matched to their transmission lines, both of them radiate the same total power. But the elevation pattern of the 180 degree radiator has more intrinsic gain in the horizontal plane -- which produces the stronger ground wave of the two.

>so 1kW into a 90 degree stick will be about half as effective
>as a 180 degree stick.)

Not following that conclusion. Using the FCC's numbers, a 180 degree MW radiator with 1 kW input produces a groundwave field of 237 mV/m at one mile, while a 90 degree radiator produces 190 mV/m. So for same input power and other conditions, the 90 degree radiator produces 80% of the field strength of the 180 degree radiator.

Put another way, the input power to the 90 degree radiator would have to be increased about 1.56X in order to produce the same ground wave field at one mile as the 180 degree radiator.

Hi all.  I've been doing an internet radio show for over a year now,
but yesterday, tried the "talk" genre.  Have a listen and see what you
think.  The "talk" part of the show lasted about 45 mins, and starts
about 15 mins from the beginning of the show.You'll find it by
going to my site -  www.chrisreardon.co.uk    look to the left and
click Radio Shows .   Then select the show   Friday 27th August 5pm -
6pm Part 2 (All chat from 5.15pm)
Thanks for listening and let me know by email what you think.It was
nerveracking not relying on a track,but I did a load of prep and this
of course helped.As usual, I didn't get through all the prep ! Ah
well, better too much than too little !
thanks.
Chris

What possible interest would anyone in the US have in listening to a radio station form Mexico, unless they live on the border and the Mexican station is attempting to serve both sides. Otherwise, Mexican AM stations are programmed to serve very local audiences within Mexico.

Wanada has a number of protected channels, where such stations can be heard well into the US. But, like the Mexican stations, there is not much interest in local Canadian affairs in the US.

> night that I am aware of).

>From a list dated last month, I count 47 Canadian AMs with 50 kw at night.
there used to be more, but Canada has migrated many big and small AMs to FM, and is slowly clearing the band except in the most major markets.

I said this was a simplification. The point is that maximum absorption occurs in the 30 to 300 MHz range. Microwave frequencies are used for cooking because they are more practical to produce, not because they are more effective at heating.

See the ANSI (American National Standards Institute) exposure limits curve below:

http://www-training.llnl.gov/wbt/hc/NonIonizing/gif/slide34lg.gif

Greatest rf absorption (minimum allowable exposure) is in the 30 to 300 MHz range.

> Two years ago, Iraq had one political party and no blogs. Now, thanks to America and our allies, it has a Pro-Democracy Party and two bloggers-turned-candidates. Meanwhile, America has a party that calls itself Democratic, even though most of its members would rather Iraq still be a dictatorship.

Y'know, before he went the LSD direction, Leary was a real research star re the interpersonal theory of psychiatry (seminal book published about 1957 I think). He was also a captivating lecturer (I've seen tapes). It's the basis for the interpersonal psychotherapy treatments for depression and anxiety, which plays second fiddle to cognitive behavior therapy, but is considered acceptable to third party insurance payers. Leary said he went in the drug direction b/c of the weird directions of his country, with the Vietnam war and civil rights. I think he could have used some therapy to take responsibility for some of his wacky decisions.

>>
At medium wave (AM Broadcast) many Class A stations (formerly "clear channel") use antennas of about 190 or 200 degrees tall.
>>

A Clear Channel is a Clear Channel is a Clear Channel. Any of 540, 640, 650, 660, etcetera.

The average height over all ND-U Class As is 195 degrees.

The real goal here is to get 400 mVm/kW at 1 km, or better, without also having high-angle radiation which could cancel the groundwave in the fringe area ... that area where the primary service area ends and the secondary service area begins.

Taller than about 200 degrees requires sectionalization to do this.

225 degrees is a real killer for a Class A, but is perfectly fine for a Class B or C, which doesn't have a large primary service area, anyway.

The best performing Standard Broadcast radiator is 360 degrees tall, and consists of a 180 degree bottom section, and a 180 degree top section.

>>
The FCC requires a minimum antenna effectiveness for that class which is higher than for the other classes of stations.
>>

362.10 mV/m/kW at 1 km for Class A.

281.63 mV/m/kW at 1 km for Class B and D.

241.40 mV/m/kW at 1 km for Class C.

Of all lower 48 Class As, two don't have conforming radiators, and both of these are in San Francisco.

Of all Alaska Class As, only one has a conforming radiator.

>>
The base impedance of these sticks near a half-wave tall is going to be pretty high - and all but one US Class A
station run 50 kW.
>>

The only such Class A in the lower 48 is 1560 in Bakersfield, CA.

There are numerous such Class As in Alaska.

Amateur Radio Newsline=E2=84=A2 Report 1411 =C2=AD August 27,  2004

Amateur Radio Newsline report number 1411 with a release date of=20
Friday, August 27th, 2004 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T.  A ham radio operator looses his house and=20
tower in a fire and an urban terrorist is the suspect.  Also,=20
interference to a ham could lead to a fine for an uncooperative=20
neighbor and lots happening on the B-P-L front.  Find out the details=20
on Amateur Radio Newsline report number 1411 coming your way right=20
now.

(Billboard Cart Here)=20
=20
**

ALL POINTS BULLETIN:  ARSONIST BURNS DOWN HAMS HOUSE

An arsonist with a grudge against radio has burned down the home of a=20
Vancouver, Washington ham.  Amateur Radio Newslines' Mark
Abramowicz,=20
NT3V, has the details:

--

A $10,000 reward is posted and the Clark County Fire Marshal's office=20
is tracking any and all leads it hopes help them capture someone who=20
has been setting fire to communications towers in the Vancouver area=20
since the beginning of the month.

Until recently, investigators say the targets have primarily been=20
state government, telephone company and cellular telephone towers.=20
But it was an Aug. 20 fire at the home of John Stein AB7F that now=20
has alarmed the ham radio community in Vancouver.

The fire marshal's office says Stein's amateur radio tower was=20
apparently targeted. It believes the fire was set at the base and=20
spread upward along the feed line. Flames fell from the melting=20
cables and spread to Stein's home.

Fortunately, authorities say, Stein was awake when the fire broke out=20
about 11:30 p.m., got out, called 9-1-1 and tried to get a start on=20
putting the fire with a garden hose. But the fire took off quickly=20
and, unfortunately, the home sustained extensive damage in excess of=20
$50,000.

The fire marshal's office says Stein told them he spotted somone=20
running away from his home and he gave them a description.
Clark County Deputy Fire Marshal John Dunaway is leading the=20
investigation into the communication tower fires.

At this point, the fire marshal's office will confirm basic details=20
about the fires. But the fire marshal's office says there is certain=20
information it cannot release at this time because it doesn't want to=20
jeopardize the case it hopes to eventually bring against the arsonist.

Stein's home was not far from the fires at the other communications=20
towers, the most spectacular of them on a more than 200-foot tall=20
tower in Vancouver. That's shared by the Washington State Patrol and=20
the Washington State Department of Transportation headquarters.

Officials say while the state patrol's communications in Clark County=20
were disrupted by the fire, 9-1-1 communications were not affected.=20
Damage in that fire was estimated at more than $100,000.

That blaze prompted the $10,000 reward offer from a foundation.
Ham operators in the Vancouver area are very concerned and fear=20

anyone with a tower could become the next victim. They've been=20 transmitting word about what's been happening via repeater, HF radio=20 and the internet across the region. They're urging hams with towers=20 to be especially vigilant and take precautions to protect their=20 feedlines, but more importantly their homes and their lives.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in=20 Philadelphia.

--

There is general agreement that this anti radio fire bug has to be=20 stopped before someone to loose their life in one of his blazes.  If=20 any one has information regarding these fires or the person setting=20 them please call the Crime Information Tip Line at 877 - 274 - 6311=20 or the Clark County Washington Fire Marshal's Office at  area code=20 360 - 397 - 2186 and ask for extension 3396.  You may remain=20 anonymous on either line.  (ARNewsline =E2=84=A2, CGC, others)

**

## ENFORCEMENT:  FCC WARNS NEIGHBOR OF HAM OVER INTERFERENCE

A neighbor of a ham radio operator who refuses to clean up=20 interference he is causing could now face a stiff fine.  The FCC'as=20 Daryl Duckworth, NN0W, says that the agency is giving the neighbor=20 one last chance to comply:

--

Duckworth:  "A follow-up warning letter went to a resident in=20 Friendwood, Texas, concerning interference to William Cooper, W5ZAF,=20 from a battery charger.  The amateur had supplied ferrite beads=20 earlier to the resident which did solve the problem.  Evidently, the=20 resident changed his mind and tossed the ferrites back over the=20 fence."

--

The FCC says that if the interference is not corrected by September=20 15th, it will have its Field Office investigate the matter and=20 possibly issue the uncooperative neighbor a hefty fine.  It also=20

suggested that he consult an attorney regarding the FCC rules that=20
control radiation from unlicensed devices like the battery charger=20
that's causing the problem to the ham next door.  (FCC, RAIN)

**

THE BPL FIGHT:  ARRL ASKS FCC TO CLOSE DOWN AZ. BPL TEST

Some important developments on the B-P-L front.  First to Arizona=20
where the ARRL is calling on the FCC to immediately shut down a=20
Broadband Over Powerline field trial in the Cottonwood.  This,=20
because it's causing severe interference to Amateur Radio=20
communication in the area.=20

The ARRL Letter says that Electric Broadband LLC and utility A-P-S=20
have been operating the B-P-L experiment at two sites since June=20
under a Special Temporary Authorization the FCC granted Electric=20
Broadband in March.  Michael Kinney, KU7W, filed the first Amateur=20
Radio complaint in June.  It cited testing by the Verde Valley=20
Amateur Radio Association in the 1.8-30 MHz range to show that B-P-L=20
interference made attempts at ham radio communication useless.  The=20
interference on typical Amateur Radio equipment shows received=20
undesired signal levels in excess of 60 dB over S9.

According to the ARRL, both the utility and Electric Broadband were=20
contacted, and no response was received.  The ARRL says that both=20
companies are aware that the B-P-L field trial has been causing=20
harmful interference and neither has taken any steps to either=20
resolve it or terminate the test.  (ARRL)

**

THE BPL FIGHT:  BAD NEWS FROM DOWN UNDER

Meantime, Broadband Over Powerline and its introduction in Australia=20
has that nations hams on the alert.  This, because little has been=20
known about what has been occurring behind the scenes as power=20
companies prepare to adopt the B-P-L technology and the Australian=20
Communications Agency considers rules to govern it.  Now, WIA Newsman=20
Jim Linton, V-K-3-P-C has uncovered an almost terrifying=20
development.  One that could mean the end of H-F operations down-under for many V-K hams.   =20

--

The future introduction of Broadband Powerline Communications (BPL)=20
in Australia could be on the condition that "less significant" HF=20
radio users such as radio amateurs and four wheel driver clubs would=20
not be protected from any interference it causes.=20

The Australian power industry has a real concern about the added=20
expense required to address interference that could affect amateur=20
radio stations and other recreational radio users. Its arguments=20
include that to remove amateur radio frequencies from a BPL system=20
will add cost and reduce the capacity and potential data rate. The=20
power industry is requesting that the Australian Communications=20
Authority (ACA) outweigh the concerns of recreational or "less=20
significant" HF radio users with the higher community benefit of=20
providing greater access to broadband-enabling technology.=20

The ACA, in response to the power industry concerns, is now examining=20
the legal possibility of allowing BPL networks to cause substantial=20
interference to "less significant" radio services, while other radio=20
services would continue to be entitled to interference protection.=20
Presumably if this becomes reality the Amateur Service could lose its=20
protection against harmful powerline interference too.  After all,=20
were are in the eyes of some just a "less significant" radio service.=20

This has been Jim Linton VK3PC for WIA National News.=20

--

If this does happen it could mean a lot fewer V-K callsigns will be=20
heard on the Hiugh Frequency and low VHF bands.  (WIA News)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline,=20
heard on bulletin stations around the world including the repeaters=20
of the Rocky Mountain Radio League serving Denver and Bloomfield,=20
Colorado.

(5 sec pause here)

**

RESTRUCTURING:  ARRL PROPOSES BANDWIDTH DEFINED HAM SERVICE

The ARRL has released a synopsis of its petition to the FCC aimed at=20
restructuring the Amateur service along bandwidth defined lines. =20
While what has been made public is highly abreviated, a drafted, the=20
ARRL's bandwidth petition would preserve double-sideband AM and would=20
stop short of opening the phone bands to digital and other modes of=20
the same bandwidth.=20

The ARRL's petition also proposes to limit bandwidth in the CW=20
subbands to 200 Hz, which also will accommodate data modes such as=20
PSK31.  It also suggests to limit bandwidth in the=20
existing "RTTY/data subbands" to either 500 Hz or 3 kHz, with phone=20
emissions specifically prohibited in certain subbands where 3 kHz=20
would be permitted. =20

Obviously this will be an ongoing story.  More on this next week as=20
reaction comers in.  (ARRL)

**

HAM RADIO IN SPACE: HURRICANE CHARLEY WRECKS AMSAT LAB

Hurricane Charlie has also taken its toll on the Amateur Radio space=20
program.  This, with word that the storm destroyed the building=20
housing the lab used to assemble the latest series of ham radio=20
satellites.

Hurricane Charlie hit Orlando, Florida at about 8 p m Eastern on=20
Friday,  August 13th packing sustained winds estimated at close to=20
100 miles per hour.  One of the places sustaining damage was Orlando=20
Executive Airport.  This was home of the AMSAT Laboratory.  The place=20
where ham radio satellites have been assembled and tested prior to=20
launch.=20

Rick Hambly, W2GPS, reports that AMSAT members in the area survived=20
with relatively minor damage but the building that houses that AMSAT=20
Lab suffered severe structural damage from Charley's onslaught.=20

It=20
has now been condemned and will have to be torn down.=20

W2GPS says that the equipment and parts inventory at the lab are in=20 good shape but AMSAT was given less than two weeks to move out and=20 find temporary storage for its equipment.  The Amateur Radio space=20 agency also must begin a search for a new building to support=20 development of the Eagle ham radio satellite and future projects.  =20

Complicating matters is that AMSAT's insurance does not cover the=20 costs of temporary storage or of moving to a new facility.  So, they=20 are asking the Amateur Radio community to keep ham radio space=20 projects alive by sending a donation to AMSAT's Hurricane Fund. =20 Hambly says that the money collected will be used to get the lab back=20 in operation as soon as possible.

AMSAT North America is a federally charted 501(c)(3)not for profit =20 organization.  Any donation should be tax deductible in the United=20 States.  Information on the fund and how to donate is in cyberspace=20 at www.amsat.org.  (AMSAT-NA, W2GPS, W5DID)

**
RESCUE RADIO: RADIO STATIONS GET PRAISE IN CHARLEY AFTERMATH

Broadcasters in Florida have been getting involved as the clean-up=20 following Hurricane Charley.  One has taken on being the voice of the=20 storm ravaged area.

According to the CGC Communicator,  FM radio station Seaview-104.9 in=20 Punta Gorda, Florida and four of its sister stations are all owned by=20 Clear Channel Communications.  Seaview-104.9's studios were damaged=20 and the station was knocked off the air by Hurricane Charley, but=20 service was restored within hours.  According to a report in the St.=20 Petersburg Times, once the storm had passed, General Manager Mike=20 Moody returned to the building housing his station.  The roof was=20 shredded and the ceiling collapsed. But one studio, no bigger than a=20 walk-in closet, was in working order.=20

Moody said that there was no power but using a generator he got the=20 studio on the air.  He also found a phone outlet reserved for a FAX=20 machine operating so he plugged in a phone, put the receiver to the=20 microphone and then let callers unravel their tales of storm=20 survival. =20

The studio is the only one based in Charlotte County.  Because of=20

this it has become a lifeline for residents searching for information=20
to help them cope with the storm's aftermath and listeners like Ron=20
Hall, KP2N, have rallied around the station in support of its vital=20
post storm activities.  (CGC)

RESCUE RADIO:  UK GROUP ACTIVATES FOR FLOODS

Meantime, over in the U-K, a ham radio emergency communications unit=20
was activated.  This, after severe rains caused flooding near the=20
town of Boscastle.  Jeramy Boot, G4NJH, is in Nottingham with more:

--

Cornwall Raynet Groups were put on standby by their Emergency =20
Planning Unit on the evening of Monday, 16th August, following =20
communications difficulties resulting from the massive flooding  at=20
Boscastle.  Eleven volunteers were available to proceed to the=20
emergency, but were stood down later as the communications=20
difficulties had been resolved.

Jeramy Boot, G4NJH

--

For those not aware, RASYNET is the U-K equivalent of ARES and RACES=20
here in the U-S-A.  (GB2RS)

**

HAM RADIO ON THE NET:  MORE CHANGES AT QRZ.COM

More changes have come to the QRZ.com super site.  This, as its owner=20
Fred Lloyd, AA7BQ, announces some policy changes regarding the=20
callsigns that are listed in the QRZ Callsign database.

--

According to QRZ's Lloyd, the site will no longer accept callsign=20

designators, prefixed or suffixed, as independent callsigns.  This=20
would include reciprocal calls such G 3 slash K6PZW -- a call I might=20
be assigned if I were visiting England.

Lloyd says that these listings were problematic for both the QRZ=20
website and the QRZ CD ROM, and they were of questionable value to=20
begin with. As of the latest software update, the server will no=20
longer accept or record such entries. The logic is that anybody=20
wanting to contact the callsign holder could just as easily look them=20
up by their primary callsign.=20
=20
Also gone will be non ham call signs such as those self issued by=20
individual SWL's, Weather watchers, and others.  Lloyd says that
Q-R-
Zed will continue to accept SWL listings as long as they are issued=20
by a formal body, and so long as they have an alphanumeric format. =20
But Lloyd says that an SWL callsign cannot be a primary login account=20
name to a website that manages amateur radio callsigns. =20

The bottom line:  Non-amateur callsigns will continue to be excluded=20
from the QRZ CD ROM and will take last priority with server=20
management resource.  In other words, they will be listed on a time=20
and space available basis, only.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW,
reporting.

--

These changes are in addition to the posting policy changes that=20
Lloyd announced two weeks ago.  (QRZ.com)

**

RADIO LAW:  SENATE WARNING ON CABLE RATES

The Senate says that it will consider new regulations for cable=20
television unless the industry addresses soaring prices and allows=20
consumers more channel choices.  Members of the Senate Commerce=20
Committee said pressure from angry constituents is leading them to=20
look at ways to hold down cable rates and let subscribers choose=20
individual channels rather than packages set by operators.=20

Since Congress deregulated the industry in 1996, cable rates have=20 increased by 53 percent while inflation has risen 19 percent.  Cable=20 operators said the jump reflected higher programming costs,=20 more channels and system improvements such as rewiring to provide=20 digital TV.   (Published reports)

**

## RADIO LAW:  BETTER CELLULAR SERVICE

The government says wireless companies are doing a better job of=20 switching customers who want to keep their cell phone number.  In the=20 first month after the change took effect, the Federal Communications=20 Commission received 24-hundred complaints. Most were from people who=20 said the transfers were taking too long. In the past month, the=20 number of complaints has fallen to 400.   Customers have had the=20 option of keeping their phone numbers when they switch to a new=20 carrier since November.  (Science OnLine)
=20

**

## EMERGING TECHNOLOGY:  PERSONALIZED PHONE MUSIC SERVICE FROM SONY

Meantime Sony Corporation has announced what it called the first=20 personalized radio service for mobile phones.   Under the still-unnamed music streaming service, subscribers would not own any of the=20 songs but could create a customized channel to listen to the music=20 they want, storing favorite tunes in personal playlists. Users would=20 also be able to listen to music from a collection of predefined=20 channels.   A "smart personalization" feature could also keep track=20 of the subscriber's music preferences and make song suggestions. =20 (Sony)

**

## THE SOCIAL CIRCUIT:  TENNESSEE IN AUGUST

Turning to the ham radio social calendar, word that Tennessee's =20 Short Mountain Repeater Club will be sponsoring the Cedars of Lebanon=20 Hamfest on August 28th.  This, at the Gladville Community Center in=20 the town of Gladville Look for vendors, a large tail gate sales area=20 and lots more.  For more information e-mail keharris@netc.com or take=20 your web browser to www.qsl.net/smrc (E-mail)

**

THE SOCIAL SCENE:  LIGHTHOUSES OF AUSTRALIA 2004 ANNUAL DINNER=20
WEEKEND=20

And if you want to travel a bit, this year's Lighthouses of Australia=20
Dinner will be held in Launceston, Tasmania on Saturday, October 2d. =20
The event will include a trip to the National Archives Office Touring=20
Exhibition on Australian Lighthouses known as "Beacons by the Sea." =20
It will also include visits to the Low Head Light and the Pilot=20
Station Maritime Museum also at Low Head the same weekend.  (GB2RS)

**

THE SOCIAL CIRCUIT:  GERMAN VHF CONVENTION HAS NEW DATE

And from Europe word that Germany's Weinheim VHF Convention,
which=20
had originally been scheduled for August 28th and 29th will now take=20
place on 11th and 12th of September.  The new venue is Bensheim which=20
is 10 kilometers north of Weinheim.  Full details are on the web at=20
www.ukwtagung.de  (DARC)

BREAK 2

This is ham radio news for today's radio amateur.  From the
United=20
States of America, We are the Amateur Radio Newsline with links to=20
the world from our only official website at www.arnewsline.org and=20
being relayed by the volunteer services of the following radio=20
amateur:

(5 sec pause here)

**

WORLDBEAT:  CB SPECTRUM SHARING IN THE UK

There may soon be some new sounds on 27 MHz C-B in the United=20
Kingdom, and they won't be saying 10-4 Good Buddy.  In fact they
may=20
be very formal sounding.  This, as British telecommunications=20
regulator Ofcom proposes to allow local religious and community=20
organizations to operate one-way low power broadcast stations within=20
the U-K Citizens' Band allocation.  Our producer, Bill Pasternak,=20
WA6ITF, has more:

--

No.  Its not a joke.  And Great Britain's Office of
Communications --=20
Ofcom -- says that this is how the new shared C-B service will work. =20

At first a small number of organizations will be licensed to transmit=20
religious services in a limited number of pilot areas.  These would=20
be called Community Audio Distribution Systems or  C-A-D-S.  Their=20
specific purpose will be to allow house-bound religious congregation=20
members --  people unable to travel to a house of worship but who=20
wish to hear local religious community services -- the ability to do=20
so.

If proven effective, Community Audio Distribution Systems would be=20
expanded as a short-range and inexpensive wireless public address=20
systems.  The U-K radio regulator says evidence of demand for such=20
arrangements has arisen primarily from within religious communities=20
and this is where Ofcom expects the majority of use to be.  But its=20
not making this a religious-only radio service.  In fact it is=20
encouraging other community groups could also use the system for=20
other similar purposes.

To test these plans, Ofcom is proposing a closely monitored year-long=20
pilot program in the areas where interest has been most widespread=20
and sustained.  This includes West Yorkshire in England and all of=20
Northern Ireland.  In those regions C-A-D-S users will share spectrum=20
with the Citizens' Band users in a way that Ofcom says will provide=20
the flexibility required to transmit religious and community service=20
material while protecting other spectrum users from harmful=20
interference.  At least it will try its best to do so.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF,
reporting.

--

Can something similar happen here in the U-S-A.  Not likely.  At=20
least not very soon.  C-B is still to crowded, unruly and=20
unstructured a band to effectively share.  But it is expected that=20
other administrations world-wide will be watching this United Kingdom=20
C-B sharing experiment with an eye to introducing similar services in=20
their nations as well.  (RSGB)

**

WORLDBEAT:  BIG VHF TECH SYMPOSIUM DOWN-UNDER

The Wireless Institute of Australia's Central Region is holding a=20
Technical Symposium Saturday October 2nd.  Rex Moncur VK7MO will=20
discuss Digital enhancement of VHF signals, Doug Mc Arthur VK3UM EME=20
Techniques, Joe Kasser VK5WU Computers for Amateur Radio and David=20
Giles VK5DG will explain that Amateur Satellites are really only high=20
tech repeaters on orbit. The venue is the Modbury Heights School with=20
talk-in on 148.850 MHz.  (WIA News)

**

HAM RADIO IN SPACE:  INDIA'S HAMSAT READIED FOR LAUNCH

A Dutch student is helping India put its first Amateur Radio=20
satellite in orbit.  Willian Lijenaar, who has graduated as an=20
electronics engineer, has provided a transponder to the satellite.=20

According to the W-I-A News, the Indian project is called HamSat and=20
is scheduled for launch in four or five months. Reportedly, the=20
coordinator of HamSat had asked the young Dutch engineer to design=20
and build the transponder.  Along with Lijenaar's unit an Indian=20
built transponder will be part of new bird as well.  (WIA News)

**

RADIO SCIENCE:  NASA TO SAVE HUBBLE

NASA has decided to try to save the orbiting Hubble Space Telescope. =20
Possibly by sending a Canadian made robot to fix it.

Nasa Administrator Sean O'Keefe told researchers at the agency's=20 Goddard Space Flight Center in Maryland about the plan.  He also has=20 instructed engineers to begin work to put the robotic mission into=20 orbit by 2007.  (NASA)

**

## DXCC: SOMALIA NOW ACREDITED

Some good news for D-Xers.  Effective immediately, the ARRL DXCC=20 Branch will accept QSL cards for operations taking place in Somalia=20 using the 6O / T5 prefix and suffix.  This includes the Somaliland=20 which is north-western Somalia and Puntland in north-eastern=20 Somalia.  These are autonomous areas but will be accepted along with=20 the southern and central areas of that nation.

The DXCC will also accredit operations possessing written permission=20 from any recognized authority that is acknowledged to be in control=20 of a particular region of Somalia.  All cards will count for the=20 Somali Democratic Republic.  And says the DXCC, QSL's for past=20 operations will be accepted where proper documentation has been=20 submitted. =20

Of coarse this is subject to change based on future developments in=20 Somalia.  We quill have more D-X news a bit later on.  (ARRL, GB2RS)

**

## DX

In D-X, word that Kris Partridge, G8AUU, is working in Baghdad and=20 has received the callsign YI9AU.  Kris is reported to be active on=20 the High Frequency bands  using 100 watts to a long wire but hopes to=20 improve his antennas soon.  He is also hoping to become active on=20 Echolink and says that he be in Iraq until early or mid-September.

And G0JMU is again active from Malawi as 7Q7HB.  Reports say that he=20 will be there until at least the 22nd of September.

Also, news that 5B4AFM will operate as J42004A from Skopelos and=20 Athens through the 1st September. The island of Skopelos counts as EU-072 for the RSGB Islands on the Air award program.

Lastly listen for the Cook Islands to be on 6 meters with a better=20 signal in coming weeks. This as KC5YKX reports over the VHF=20 Reflector that he has shipped a 5 element beam there for ZK1CG to=20 use. ZK1CG should be on the Magic Band as soon as the antenna=20 arrives. QSL all of these operators in these stories as directed on=20 the air. =20

(All aboveDX from various DX sources)

**

THAT FINAL ITEM: ECHO - THE TONE ACCESS HAM RADIO SATELLITE

And finally this week a rhetorical question. Why use continuous tone=20 coded squelch access to talk through a ham radio satellite? AMSAT=20 says that there are several very good reasons and Amateur Radio=20 Newsline's Norm Seeley, KI7UP, has them in this report:

--

Continuous tone coded squelch is better known in ham radio circles=20 under its Motorola trade name of P-L or Private Line. And AMSAT says=20 that there are several good reasons to use it on the new Echo ham=20 radio satellite. =20

First, and simply, is on orbit power management. The ability to=20 minimize the amount of power used by the satellite.

Recent data collection shows that on average, Echo's tone access FM=20 repeater transponder is on for less than 40% of an orbit. There are=20 orbits where that number is as high as 65%, but the average is below=20 40%. That means the satellite is conserving over 60% of the power=20 that would have been consumed by the transmitter if it were being=20 keyed up by every random signal passing through its receiver. Since=20 you cannot easily change rechargeable batteries on a satellite like=20 you can on a terrestrial H-T, power management is crucial to the long=20 term stability of Echo or any man made satellite.

The second reason kind of tag's onto the first. Its the idea of=20 minimizing the three letters dreaded by hams world wide: Q-R-M.

In the tone access mode Echo does not have to listen to other traffic=20
on the Amateur bands or any other signal not intended for the=20
satellite to relay.  While the satellite still has to compete with=20
these R-F sources to capture the receiver, they are not retransmitted=20
downlink.  This means you do not have to listen to taxi cabs being=20
dispatched in some third-world nations where the V-H-F Amateur  bands=20
have more business going on than ham radio contacts being made.  A=20
problem that the world wide Intruder Watch program has been fighting=20
for years.

Yet another reason for tone access on Echo.  By closing the audio=20
path when no access tone is present the ground based user hears a=20
short unmodulated carrier for the duration of the squelch tail.  This=20
can be used as a good measure of how well you are actually hearing=20
the satellite. =20

Without tone access filtering, uplink band noise is heard.  And, any=20
ham who has heard a carrier access repeater where the squelch is open=20
knows what that sounds like.  Amplified noise that is sometimes=20
difficult to differentiate from the actual band noise.  In the case=20
of a ham radio satellite it means not knowing if you are hearing the=20
bird at all.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in=20
Scottsdale, Arizona.

--

After Echo's launch there was talk on some terrestrial repeaters
that=20
AMSAT had put a private P-L repeater in space.  This is far from the=20
case.  Without tone access, the lifespan of Echo would be=20
significantly reduced and fewer hams would have their chance to make=20
contacts through it.  (ANS)

Interestingly enough, CC is flipping the station in Denver just one day after Boulder's Pacifica-friendly KGNU has taken over the former KJME. The station claims that there's been call for them to improve their signal in Denver, particularly after the Iraq war and the failure of KNRC at a balanced talk format (probably because it was balanced).

KGNU's always been farther left than the public radio mainstream (they dropped NPR membership in the early 90s after their listenership complained about the network being too passive on coverage of the first Gulf war). However, along with "Democracy Now!" and "Free Speech News," they carry some BBC World Service programming. However, the only other name-brand public radio shows they carry are "AfroPop Worldwide" and "This American Life" and most of the rest of their programming is volunteer-driven music programming. Not exactly what political junkies would want (but on the other hand, I assume most Pacificistas would consider Air America too capitalist for their tastes).

> Radio today has as much per-person weekly listening as it had the year before the TV freeze was lifted, when less than 43% of Americans could receive one TV signal. We have had the transistor, TV, color TV, CATV, Cable, video games, the Internet, and lots of other entertainment sources. Radio is very resilient.

>From the point of view of a consumer: The only time my wife and I don't listen to XM radio is when we're in my car, which doesn't have it yet. When we're in her car, it's pretty much constant XM. We're remedying my lack of XM as soon as the XM-Direct aftermarket box comes out. We were able to find an Alpine box for her car. Until I read this thread, I'd never heard of IBOC. I still don't know what it is. I've seen and heard many ads for XM and Sirius, though.

Radio is definitely not going away, but it is going satellite. You may have scores of commercial radio choices in LA, NYC, Chicago, Dallas, or Miami, but you don't in Knoxville, TN, Overland Park, KS, Portland, OR, or most of the rest of the country. 95% of the country listens to land-based radio weekly, but much less than 1% of the country currently has XM. I don't know what the subscriber figures are for Sirius, but both are going up. Just about every week at work someone asks me about XM and ends up getting it. If the weather suddenly changes or traffic is snarled, I may switch to a local station and wait through the commercials, hoping that they'll tell me about it. They do tend to get things a little quicker than the Boston-area XM traffic and weather channel.

2 million XM subscribers in under 3 years?!? Wow! Cable TV started in 1948 and it didn't hit 2 million subscribers in the U.S. until it had been around for about 20 years. The creation of HBO in 1972 probably helped the skyrocket in subscribers to 15 million by the end of the 1970s. I wonder what the flood of cheap XM receivers that's recently started will do to XM market penetration. Instead of $250 or more for an XM receiver that the first 2 million subscribers paid, now we're looking at $50-$100. You, yourself, say that you have or had six XM receivers at the same time!

People pay for cable and satellite TV, even with all of the commercials. Stating that satellite radio has no chance against terrestrial broadcast is starting to have the same level of "wisdom" that "GET A HORSE!" once had.

CBU (Vancouver, BC) is not 50 Kw at night.
Nor does CBU have an ancillary 1650-1700 Khz frequency at 50Kw.
Nor do most Canadian MW stations close to the border.

US stations have bombarded Canada with US material for the past 60 + years.

It is not a good reflection on the US to be bombarded (in Canada) by 3 to 5
US stations on top of each other, as soon as leave a major Canadian
metropolitan centre.

Canada should (if it does) adopt DRM for MW radio, at least for daytime
transmission.

|
| Actually, they did, but by government edict, they had to do it.

Then why did (at least some of them) promote it so much?

It certain added to the feeling that if you didn't tune in, you
would miss something. That's been missing from most radio stations
for a long time.

| > Try to imagine "The Big 89" (WLS) without Lyle Dean.
|
| The better stations elected to do news well, since not doing it was
| not an option under the regulations then governing the industry.  But
| most of them were pretty much rip 'n' read operations with no real
| staffing even then.

The rip 'n' read criticism is fair, for at least some of the
operations. But I do recall that the Storz stations had 24/7
coverage and fairly frequent use of obviously local phoners, even if
the on-scene coverage was sometimes lacking.

One event that may spark an increase in satellite radio use in the Miami, FL area is the decision of WKAT, "Classical 1360", to broadcast infomercials during the morning hours. The fact that there is classical music on AM radio shows the limited choice of music on FM.

My only question is that after a 2 year period of XM and Sirius, why hasn't the cost of receiving equipment come down?

I'm writing in regards to the FCC's Emergency Alert System. I am a hobbyist trying to set up a system to listen for EAS broadcasts in my area, but although I've read over the documentation on the matter (11.31, 47CFR)*, I can't figure out what the frequency to listen on should be. Can anyone offer any guidance on the subject?

Thanks,
Rob

What's really bad is.
When I called WOR up in June to ask them, "Where I could get a Digital Receiver?"
They laughed at me and said.  You can go to any Best Buy or Wall-Mart to buy a radio.
I then said, "I know I can buy any AM radio.  But I want to listen to WOR's digital IBOC.

Then the guy asks,  "What's IBOC?".  I said that High Def digital radio.
He then says No.  We don't broadcast that kind of radio.  You need to
subscibe to Satellite radio to listen to digital radio.

CREATIVE SPECIALIST
News and Information Program Producer, Division of Broadcasting,
WILL-AM-FM University of Illinois at Urbana-Champaign (42428)

THE STATIONS:  WILL-AM is primarily a news and information station with a power of 5000 watts during the day at 580 kHz.  The station serves listeners in most of Illinois and half of Indiana, including Chicago and Indianapolis.  WILL-FM is a classical music and fine arts station, serving listeners in east central Illinois and west central Indiana.  The station broadcasts 24 hours a day with a power of 105,000 watts with an antenna 850 feet above ground.  Both stations are licensed to the Board of Trustees of the University of Illinois.

THE LOCATION:  The University of Illinois is located in Urbana-Champaign, which offers the advantages of medium-sized-city living (110,000 population) 135 miles south of Chicago, 175 miles northeast of St. Louis, and 115 miles west of Indianapolis.  The University setting (34,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreation facilities.  Local schools, libraries, shopping, and performing arts centers are excellent.

THE POSITION:  This is a full-time, regular Academic-Professional position.  Two full-time (plus additional part-time) news and information program producer's work under the News Director.  The person in this position will gather, produce, present news reports; produce news feature material and create information segments on a wide variety of topics for two daily newsmagazines; and research program topics as required. Finally, the person is expected to enthusiastically and effectively participate in on-air fundraising, marketing activities, and community projects.

QUALIFICATIONS: A bachelor's degree is required (a graduate degree preferred), plus a minimum of two years' full-time experience as a news reporter and producer of feature length material for use in magazine-style information programming. Applicants must demonstrate in an audition tape the ability to present news and other information programs in a professional, unaffected, personable style. Applicants must also demonstrate they have an active interest in and knowledge of the significant events and issues that comprise the news of the day and an ability to conceive of and produce programs that reflect that insight. Ability to type with accuracy is required. Proficiency in digital audio editing is preferred. Ability to drive a car is desirable.

SALARY AND BENEFITS: Salary for this position depends upon qualifications and experience. There are twenty-four workdays of paid vacation, plus life insurance, health insurance, ample sick leave, disability leave, a pension system, opportunities for advanced education, and other benefits.

TO APPLY: In order to ensure full consideration, application must be postmarked by September 17, 2004. Send a complete resume, a non-returnable audition tape, and the names of three professional references to the person named below. Receipt of resumes will be acknowledged. Target starting date is approximately October 19, 2004.

Tom Rogers, News Director, WILL-AM-FM
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue, Urbana, IL 61801-2316
(217) 333-0850

The University of Illinois is an Affirmative Action/Equal Opportunity Employer

I don't think that yelling "fire" in an auditorium is a first
ammendment right. Neither do I believe that broadcasting a fire
warning when none exists, on a radio station - is a first ammendment
right. I guess you do!

> I'm writing in regards to the FCC's Emergency Alert System. I am a hobbyist trying to set up a system to listen for EAS broadcasts in my area, but although I've read over the documentation on the matter (11.31, 47CFR)*, I can't figure out what the frequency to listen on should be. Can anyone offer any guidance on the subject?
>
> Thanks,
> Rob
>
> *http://www.fcc.gov/eb/eas/47part11.pdf

It uses regular AM, FM, and TV broadcasts stations as well as NOAA weather. There are no separate frequencies used for these--it is a "system" for alerting the public rather than a "net" of dedicated frequencies.  Two way links or subcarriers associated with the bropadcast stations are used for linking and there are some HF stations on the FEMA HF frequencies that have been very rarely heard that help provide link in case wire and other links fail.  In other words, it uses already existing radio systems rather than having its own and the local frequencies depend on the local area.

See instead
http://www.fcc.gov/eb/eas/plans.html
for your state for additional information.

NO but if 50,000 more hams had come into the service,  and their voice
privileges were on 220 and 902,  there damn well would have been a lot of
commercially available equipment.

 Probably all you relatives live near AM radio transmitters and those
waves actually cause baldness also!

> I'm writing in regards to the FCC's Emergency Alert System. I am a hobbyist trying to set up a system to listen for EAS broadcasts in my area, but although I've read over the documentation on the matter (11.31, 47CFR)*, I can't figure out what the frequency to listen on should be. Can anyone offer any guidance on the subject?

Section 11.11  The Emergency Alert System (EAS).

(a) The EAS is composed of broadcast networks; cable networks and program suppliers; AM, FM and TV broadcast stations; Low Power TV (LPTV) stations; cable systems; wireless cable systems which may consist of Multipoint Distribution Service (MDS), Multichannel Multipoint Distribution Service (MMDS), or Instructional Television Fixed Service (ITFS) stations; and other entities and industries operating on an organized basis during emergencies at the National, State and local levels.

All broadcast stations are required to originate a Required Weekly Test
(RWT).  They are also required to relay a Required Monthly Test (RMT)
that originates elsewhere.  Many stations voluntarily air other alerts
(usually weather-related) but are not required to do so.

Your local NOAA weather radio (162.4-162.55MHz) also carries these, as
well as EAS broadcasts of severe weather watches and warnings.

Hi All,

My original posting on this topic has raised a wonderful number of replies, thanks to you all, they are all very interesting..

I am convinced radiowaves are harmful, just like mobile phones, PC screens etc. Remember they thought asbestos was save until a few years ago!

Mike

Hi, I'm new to the group and I don't know where else to go because I'm looking for something really rare. I'm looking for some CBC FM airchecks, preferably late 80s, early 90s, and if any of you guys can help, please let me know. My preference is Brave New Waves. If you can assist, let me know.

Using commercially-available equipment is cheating anyway.  What does it
take to modify PCS cellular phone firmware for digital communication on
902?  Is it just a matter of firmware or isn't the RF section able to tune
that far out of band?

And the government exposure limits are more stringent at the FM frequencies (30 to 300 MHz).

Therefore, smoke as many cigarettes as you want to, and if you get lung cancer, just blame it on the air pollution.

Perhaps when I walk into a fire, the blistering burns all over my skin are caused from the chemicals in the sun tan lotion I used the day before.

Voting for Nader or Badnarik is somehow taking a vote away from Kerry, but no one ever suggests Bush and Kerry drop out of the race because they are taking votes away from the other two.    Ridiculous.

Hi all,

TheatreRadio is a new site � the original online radio station for musical theatre.

Visitors will be able to enjoy music from future, current and recent musicals streamed live across the internet in association with Live365.com

Whilst listening to great music, visitors will be able to find out more about current musicals, and even buy tickets for and merchandise relating to a specific production.

TheatreRadio is an innovative and original way of making musical theatre accessible to all.

The launch is planned for September 2004.

Many thanks,

TheatreRadio

www.theatreradio.co.uk

Do you really need to have people smoke cigarettes for 80 years before you agree that inhaling smoke into your lungs is going to cause health problems?

These are all basic things we should know without having to go through decades of health records to figure out.

I knew in 1983 that Aspartame was a horror, yet only now are people starting to figure that out.

> Let's not forget that perfectly random chance is going to usually give us

> there are more lumpy combinations to go around.

Same with trying to link lung problems with smoking.    But can you seriously say that breathing smoke into your lungs is not going to cause health problems?    Just use common sense.

> Random chance alone might give us some leukemia hot spots.  Some of those
> hot spots might be near AM transmitters.  It'll be interesting to see if
> other leukemia hot spots are around AM radio transmitters, or if is just one
> of those weird number things.

While you do all that, I will just avoid living next to any AM or FM radio transmitters.     I wish I could do the same with Microwave Cellular towers, but that is getting impossible to avoid today.

> >  I also often wonder what PCs are doing to us all staring at them all day,

LCD screens are obviously much safer and healthier than the CRT screens.    Do we really need studies on that too, or can we all use common sense to figure that one out as well?

> Brother Stair used to say that the Internet was Satan's entryway into the

> most adults would make them resonant somewhere near, or in, the FM broadcast
> band.

Comparing wavelengths of "people" based on their height is ridiculous. Microwaves are a much shorter wavelength and cause much more damage to the human body, so the wavelength of people based on their height theory needs to be thrown out right away.

> I'd expect energy transfer to be more effiecnt from the FM broadcast
> antenna to the human body than it is in the AM broadcast band.

This is like the argument that you should vote for the lesser of two evils, rather than vote for a good candidate.

Why choose to live near an AM or FM broadcast antenna? I would not want to live next to either. What is more annoying is how cellular telephone antennas are getting to be impossible to avoid, and new ones are being put up every week.

> Anyway, there's been over 80 years of kW+ levels of AM broadcasting, and it
> seems strange this leukemia concern has gone unnoticed until now.

80 years is only one generation of people. Give it time. Old time radio commercials have doctors endorsing cigarettes that are healthy and good for you and your throat.

Cell phones have not been in use long enough for the evidence to exist to convince those that don't have the radio background to know how dangerous they are now, without needing to see several generations of people suffer from them first.

Aspartame is only now starting to get the attention that I was aware of decades ago.

Now we have Sucralose (not sucrose) and Ace K, and again, we will have to wait around 20 years or longer before enough people have suffered to start to consider them a health threat.

This is the same theory in which people claim using their cell phones are safe,
because the power they put out is so low.

They are powerful enough to transmit to cell towers miles away!     Now put that
power inches from your head and how more concentrated is that power?

How about that price too?  You could get a Lif time Subscription from Sirius
Satellite Radio or 5 years of XM for that price.
The only other one I know about is the kenwood IBOC tuner.  But you need a
HU to go along with it. I think It's around $800.00 total for the tuner and
HU.

If not vertical, what sort of radiators do they use on AM/MW in Europe?

> any time before the first program of the day aired?

Remember that the only "legal" requirement is the calls and city of license. And, in
my (non-professional) opinion, a non-legal ID at the top of the hour, just before
programming, is bogus. The ID, though, needs to be as soon as practicable after

emissions start and end, as well as the aforementioned
as-near-to-the-hour-as-possible (TV having the additional option that they can ID
either or both the video or audio).  But don't forget that the FCC really is pretty
slack with this rule, where the legal ID on more than a few alt-rock stations is
buried in the :50 6-minute commercial break, and then come the top of the hour
(which, to me, is still a reasonable break in programming) you'll hear something like
"Dumbbutts96 - your Rockin' Jockin' Joint for the Tri-State Area! (A Clear Channel
Station)".

Bzzztttt!

But like I say, there are more important things for the FCC to worry about than what
some stupid consultant thinks is good radio.

Huh? AM stations essentially always have vertical radiators, especially in Europe where there are so many high powered stations.

Even systems that appear to have a radiator strung between two support structures use the vertical component to do the radiation, with the flat top part being top loading. In the past, many Latin American AMs had a wire strung between two tall trees or poles... it was still the vertical feed that did most of the work... they were T's or inverted L's, but they were, simply, top loaded short verticals.

In general, AMs don't work very well otherwise.

Actually, that's absolutely true.  H-Pol radiators have little to no ground wave. This is why a vertical radiator is sometimes called a "ground plane" antenna, although there's no requirement that the vertical need be on the ground.  FCC rules address(ed?) those facilities which use an elevated vertical radiator (like the operation I worked at in Erie) with a suspended web of wires below (a counterpoise) which served as the "return" path...for those installations on the ground, this counterpoise is usually buried.  (The rules took elevated counterpoises into account, but also said that no new such installations would be permitted...too much intermodulation caused by a typical building's structural steel joints.)  Those familiar with 11-meter Citizens Band know this antenna in its 27MHz form, where rather than having radial spaced 3 degrees or less apart, three such radials at 120 degree spacing is more than sufficient for reasonable efficiency...it's a function of wavelength.  (And if you're curious, the reason why this particular configuration has these radials at a 45-degree angle from the horizontal is because a ground plane antenna has an intrinsic impedance of about 30 ohms....the farther towards being vertical, the more it's like a dipole, with a dipole's characteristic 72 ohm impedance.  Thus, at 45 degrees or so, the ground planes typically used for C-Band are about 50 ohms without the need for a matching network.)

The nice thing about the low radiating impedance of a vertical radiator is that

the
high base current necessary for a given power means that the magnetic vector is
bigger than the electrostatic vector, and since ferrite loops used in most AM
radios
respond to the magnetic vector, the "connection" is more intimate.

This concludes your antenna theory class for the day. ;-)

It's not just modern rockers--burying the legal in the :50 stop set is
common in *every* music format (it seems that talk radio still
believes in call letters over image name).  Either that or whispering
what they don't really want you to hear like this example:  "LITE ROCK

97! [whisper] WXXX Morton Grove [end whisper] CHICAGO'S HOME FOR
CONTINUOUS LITE FAVORITES WITHOUT THE RAP OR HARD ROCK OR SLEEPY
ELEVATOR MUSIC!"  All, of course, with the overproduced whooshes and
lazer zips in the background.

Just think--all you needed in the old days was a tymp roll, Bill Drake
saying "And now, ladies and gentlemen, the Real Don Steele--on Boss
Radio!" and the Johnny Mann Singers singing "93 KHJ--Los Angeles!"
And all of that at the top of the hour.  Guess times have changed.

The topic was: Is AM radio harmful?

Certainly my reply was not related to any physical harm which might result from radio waves themselves- but since the message board has to do with radio broadcasting in general- I thought it would be a good opportunity to inject ANOTHER TYPE OF MEDICAL HARM which I see inherent in AM broadcasting today.

I will continue to take a look at the threads in this post and see if conjecture or humorous , slightly off the subject comments are part of it. (which seems to be pretty much standard throughout google message boards.)

I hope you will show as much concern for threatening language and 4 letter words- as you did my post.

However in the future- I will do a better job at sticking to the subject at hand.
Sincerely, Mike Cohrman

For sale:

Partial interest in AM daytimer in nice South Carolina
city.

(The "Radio Crazy" is loose!) LOL!

This is a joint venture and there is an element of
risk. You could lose all or part of your investment.

The station is in Walterboro, SC. Daytimer, 2,500
watts, nondirectional, 1000 KHz. Tower has CP to move
0.2 miles. No real estate included.

Expect the asking price to be about $125,000. This is
a propering community. It is the county seat and the
largest city in that county. This is the only AM in
that community of about 5300.

Active or inactive investors with at least $10,000
each are welcome. No individual may own over 49
percent of the station. This means me too!

Station established in 1947.

References:

Nope..it is a complete shout down.  Local station here.  I have noticed other
stations where I have lived have done ths.

"Clear Channel jettisoned KPOP's longtime Adult Standards and heritage call letters [Monday] morning to becomes KLSD, 'San Diego's Progressive Talk,' " reports RadioandRecords.com. "KLSD's new lineup of left-of-center talk personalities includes Air America's Al Franken, Randi Rhodes and Janeane Garafolo along with Jones Radio Network's Ed Schultz and WOR Radio Network's Lionel."

KLSD? We guess that's appropriate for these acid-tongued liberals.

---

Two years ago, Iraq had one political party and no blogs. Now, thanks to America and our allies, it has a Pro-Democracy Party and two bloggers-turned-candidates.
Meanwhile, America has a party that calls itself Democratic, even though most of its members would rather Iraq still be a dictatorship.

could be things have changed without me noticing but i dont think digital
PSC type stuff is allowed for hams...  maybe in experimantal bands?
in the poplar comm freqs it just FM, ssb, AM, CW, a little FSK, some packet,
a little SSTV, some full TV (usully in conjuction with emergancy support
operations)

anything encrypted or encoded was a big no-no

why not look it up?

you will find that a 5 watt transmitter operating on 450 MHz with a 1/4 wave
antenna might produce enough heating to damage the cornea of the eye IF the
tip is placed within one CM of the eye.

To oversimplify a bit: Low frequencies (like AM broadcast) pass through the body without being absorbed. Microwave frequencies bounce off the body without being absorbed. It's the frequency range between 30 and 300 MHz where maximum absorption takes place.

Every government has different limits, rules and laws.    So this is MEANINGLESS!

As if moving to a different country somehow makes the exposure more or less safe than being in another country.

Never go by government information.

One road along side homes in my area is 55 mph, while another road with no homes or buildings on it is 25 mph.

What does that prove?     That the government is made up of bozos and idiots.

What if the government issues a statement that smoking cigarettes is good for you and gets rid of cholesterol?     Would you start smoking?

> that far out of band?

Think of it this way.   When you have an FM broadcast antenna and transmitter, it makes quite a difference when switching within the same band from 88 Mhz to 100 Mhz.  (only 12 Mhz)

Now you want to take something from around 850 Mhz to 902 Mhz  (52 Mhz difference)

Plus the higher up you go, the more critical the circuitry.     Even in the 440 band you are already dealing with microsurgery when using the miniature surface mount components.

Besides, working with microwaves is never a good idea.    Might as well just take up smoking cigarettes instead.

I would play with mercury and use lead paint in my home no problem, but I would not ever build a transmitter and use microwave frequencies.

Go to http://tx.mb21.co.uk/gallery/ and look at some of their AM/MW sites. Not only do many of them still use those cool T-shaped horizontal wire antennas, but in some shots you can see sheep grazing in the fields very close by. The RF foes in the USA should consult with veterinarians in the UK and see what their research comes up with

GTT

Truth wrote:

> > Yes, but researchers can also sift through 80 years of public health records. The people who have, or had, leukemia are known. It shouldn't be hard to find out who lived near a radio transmitter and for how long. It might be interesting to ask veterinarians about animal leukemia, since many transmitters are located in rural areas.

asbestos IS safe... just dont eat it or drink it. :)

of course radio waves are harmfull, you would not want to be in a microwave
oven if it was turned on.

come to think of EVERY freeking thing in the universe is harmfull. there is
not one material thing in existance that you can name that cannot be used to
kill.

but think about this, sense the dawn of time (or at least earth) the planet
earth has been bombarded by electromagnetic radiation from the sun, stars
including radio stars, pulsars, cosmic radiation, gamma ray bursters, even
tornados and hurricanes are known to produce RF.

it is equally possable that mankind NEEDS RF the same as it need vitamins
and sunlight to be healthy!

bet someone could get a healthy grant to study this.

"Bob Haberkost" <cbclistener-really!-@canada.com> wrote

>> Huh? AM stations essentially always have vertical radiators,
>>especially in Europe where there are so many high powered
>>stations.  In general, AMs don't work very well otherwise.
>
> H-Pol radiators have little to no ground wave.

H-pol would not be used on VHF and above (FM/TV broadcast etc) if that was true.  A linear, horizontal dipole antenna at MW or any other band generates its maximum field strength at all angles perpendicular to its longitudinal centerline -- which includes all angles from below the antenna out to the radio horizon; i.e., a "ground" wave.  [Free-space radiation with respect to the dipole itself is the same whether its axis is horizontal or vertical.]

The reason h-pol is not used for MW is because path losses are much higher for h-pol than v-pol in that part of the radio spectrum.

> This is why a vertical radiator is sometimes called a "ground plane"
> antenna, <snip> for those installations on the ground, this counterpoise
> is usually buried.

The radial ground system used with MW broadcast antennas reduces antenna system losses (I^2R), and keeps maximum radiation directed more toward the the horizontal plane, rather than at some elevation angle above the horizontal.  The FCC defines the minimum efficiency of radiators licensed for MW broadcast in terms of producing a field strength of so many mV/m at 1 km from the antenna, per kW of antenna input power.  These efficiencies cannot be met without using a good ground system.

>Those familiar with 11-meter Citizens Band know this antenna
>in its 27MHz form,  <snip> the reason why this particular configuration has
> these radials at a 45-degree angle from the horizontal is because a ground
plane
> antenna has an intrinsic impedance of about 30 ohms....the farther towards
being
> vertical, the more it's like a dipole, with a dipole's characteristic 72
ohm
> impedance.  Thus, at 45 degrees or so, the ground planes typically used
for C-Band
> are about 50 ohms without the need for a matching network.)

Possibly more important is the point that drooping the radials also tends to lower the angle of maximum radiation, which can improve field strength for receiving antenna sites at/near ground level.

> The nice thing about the low radiating impedance of a vertical radiator is
that the
> high base current necessary for a given power means that the magnetic
vector is
> bigger than the electrostatic vector, and since ferrite loops used in most
AM radios
> respond to the magnetic vector, the "connection" is more intimate.

??  The table below shows the efficiencies for MW vertical radiators with a good ground system. The self-impedance of a 90 degree vertical is about 50 ohms, and for a 180 degree vertical it is over 100 ohms. So for the same input power, base current is lower in a 180 degree radiator than in a 90 degree radiator. Yet the efficiency of the 180 degree radiator is higher -- the opposite of the above quote statement.

The ground wave field strength of a MW vertical radiator per kilowatt of input power is related only to the current distribution in the radiator, not its base impedance. Whatever the base impedance is, it can be matched to 50 ohm line at the tower base, using the right network. But the network doesn't affect the relative field radiation pattern of that radiator.

AM Radiator Efficiencies, 1kW input
(for equal distances)

| Twr Hgt, Deg | Effic |
|---|---|
| 70 | 182mV/m |
| 90 | 190 |
| 100 | 195 |
| 180 | 237 |
| 190 | 246 |
| 225 | 274 |

Note here that "efficiency" is the FCC definition for MW broadcast. Efficiency falls for short radiators because the ohmic loss even in the best ground system becomes a bigger percentage of the resistive term of the radiators base impedance.

A friend of mine has started a radio school in the Swiss Alps! How exotic is that?

It's a four-month course spent learning and broadcasting in English

You can check it out on http://www.mountainmedia.org

If you know anybody who might be interested, please spread the word!

John

Good stuff!  We used to have the power company crews pour used PCB oil
on our access roads.  Really kept the dust down.  Back then, nobody thought
anything that came in drums marked "SAFETY OIL" would turn out to be unsafe.

Probably all the lead contamination in the groundwater from our sweated-connection radials didn't help either.

ALL of my Italian relatives eat lasagna, and they are ALL bald.  Even my
Aunt Mary.  I demand a Federal grant to study this further.

I left out  50 KW CKLW across the river as a talker. Actually, CKLW has C2C
from 1 EDT to 5, except on the weekends when it goes to 6. On Sat/Sun,
there's a rebroadcast of both Art Bell's programs from the past weekend.from
9 PM to 1A. So on Sat/Sun, there's 9 straight hours of C2C!

WJR is a 50 KW ABC O&O that plays a rather conservative slant all day long
except for 3 hours of Mitch Albom, who is very left-wing. Those two stations
fill the bill for me, as I keep my radio on while I do copy and technical
editing for a number of hours daily.

Gary

DJ's First Book Jumps To #2 Best Selling Paperback at Booklocker.com

(Little Rock) - "The Cash Cage", a new book that reveals the inner workings of the Radio business, has jumped to the #2 Best Selling Paperback at Booklocker.com.

"The Cash Cage" was written by Corey Deitz, a 25-year Radio veteran who dishes the dirt on an army of wanderers who spin tunes, give the time and temp, take the requests and when the pressure is on are easily discarded by a cutthroat business that disguises itself as your favorite song.

"I wrote this book for both listeners and people in Radio," says Deitz, "because in this business the real show starts when the mike turns OFF."

Corey Deitz has hosted radio shows in Chicago, Cleveland, Columbus, Richmond, Virginia Beach, St. Louis, Toledo, Little Rock and other cities. He has experienced all facets of the Radio business from top to bottom.

"The Cash Cage" is a captivating trip through an exciting medium held together by an odd lot of gypsies who move from city-to-city in an incessant struggle for ratings, income, and acceptance.

Deitz's story is also a "how to" manual on confronting life head-on. Based on his own accumulation of hard-knock knowledge, he offers a good dose of street smarts, wisdom, and philosophy from which anyone can benefit.

In addition to the paperback version, the eBook version of "The Cash Cage" is now the 7th Best Selling eBook at Booklocker.com

This was pretty much the case for the rural roads through a lot of the
state.  And definitely it was the case for all of the power line right of
way roads.  Not an uncommon thing at all, and sadly the contamination will
outlast all of us.

For sale:

Partial interest in AM/FM radio station in small Alaska city.

This is a joint venture. There is an element of risk and you could lose all or part of your investment. (Standard disclaimer, "Big Brother" makes me do it!).

The "Radio Crazy" is baaaakkkk!!!

Active or inactive investors with at least $20,000 minimum each are welcome. All investors would be on the board with full voting rights if desired. No individula may own more than 49 percent. This means me too!

No real estate is included.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman

This is a link to an article investigating leukemia rates in areas near AM transmitters.

http://www.wired.com/news/medtech/0,1286,64579,00.html

I don't doubt that high levels of RF can be dangerous. The first two chief engineers I worked with both died of cancer in their 50s.

Maybe they got cancer from some other cause (both smoked), but I still feel like I'm inside a microwave oven anytime I'm around an AM transmitter site.

Wouldn't FM broadcast antennas be an even greater concern?  The height of
most adults would make them resonant somewhere near, or in, the FM broadcast
band.  I'd expect energy transfer to be more effiecnt from the FM broadcast
antenna to the human body than it is in the AM broadcast band.

Anyway, there's been over 80 years of kW+ levels of AM broadcasting, and it
seems strange this leukemia concern has gone unnoticed until now.

The thoroughly undocumented cases (no studies of groundwater contamination, etc.) was based on the effects of stations with twice the power allowed in the US on AMs.

Low levels of AM as experienced in the US would be very different.

You did an excellent job of pointing out why radio programming today has
to be much more professional and research-driven than it used to be.

Back when today's "classic rock" recordings were still fairly current and
the format was called "album rock", most stations had some system for
identifying which album cuts were acceptable according to the station's
program and music directors; but individual jocks often had considerable
latitude in choosing just which cuts they played.  For those who are
too young to remember, the microcomputer was still in its infancy back
then and AFAIK no stations were using computers to schedule music -- human
beings had to make decisions as they went along.

In those days a good jock knew the station's library intimately, knew the
audience nearly as well, and could find the right cut for any particular
moment; we even took requests!  A mediocre jock knew most of the most
popular songs and artists, and seldom played anything else (except when
they heard another jock play something).  A really bad jock had poor taste
in music (and little understanding of flow and tempo), played personal
favorites, and generally stunk up the station.

A youngster who grew up listening to the music his parents liked could be
a pretty goo classic rock jock.  His twin who only listened to what the
other kids in the neighborhood liked would need the guidance and restraint
of a knowledgeable music director who uses scheduling software to
preselect everything.

But if I were still programming, I'd rather hire hire either fellow
oldtimers or jocks who have been in the market for several years, then

allow them as much playlist discretion as they can handle. Nothing against young gypsies -- i was one myself, back in the day -- but nothing beats having real live people who know both the music and the local audience.

While I think this whole thing is just another pseudo-science scare.... It is NOT true that US stations have much lower field strength on AM.  AFAIK, very few foreign stations are directional at any power.  Some US 50 kW stations have pretty potent ERP in their beam.  Not a megawatt, but quite a bit nevertheless.

I'm a lot more worried about teens and others I see wandering around with a cell-phone permanently attached less than an inch from their brain.

I'd sure think so.

On the other hand, the FM signal is radiated from an antenna atop the tower.  Stand at the base of a 300' FM tower, and you're 300' from the thing that radiates.

At an AM station, the entire tower radiates.

It is another one of these cases where there may indeed be a link, but there is no assurance at all that the link is causative. For example you can find a link between smoking and cirrosis of the liver. Many smokers are also significant drinkers. It wasn't the smoking that caused the problem, but the smoking and other behaviours that are causative are often seen together. I.E. most high power AM transmitters are in major cities, and there are significant other hazards from things like air pollution that exist independent of the AM broadcast facilities.

As far as those working around the equipment, I'd be more interested in the potential X-ray exposure. The voltages used in high power transmitter tubes produce significant X-ray hazards, and these weren't recognized for a long time.

It's not the radiation.  It's the hatred.

Hi Frank,

Good point but compare to asbestos causing cancer where it can take 60 years
to appear.

I also often wonder what PCs are doing to us all staring at them all day,
we may be in for a big health shock in the years to come!

Also mobiles may ruin the brain. The consequences could be disastrous.

Happy thoughts!!

Cheers

Mike

These were folks who engaged in common engineering practices like soaking
a rag in carbon tetrachloride to clean PCB oil from failed capacitors out
of transmitter chassis, right?  God knows we all did that sort of thing...

The RF energy could conceivably have an effect on cell membranes and the potentials that develop across cell membranes. Perhaps some cells are more sensitive to such changes in membrane potentials and lead to higher incidences of certain diseases which in this case is leukemia.

As for not noticing the correlation for over 80 years that isn't so unusual. It really is contingent on many factors including the increase in the number of stations over the years, the increase in power over the years, the proximity of the population to RF over the years (ie. the shift from a rural to an urban population), the extent of the exposure, lifestyle and dietary changes and so on and so on. It such a case it may take quite awhile to isolate a potential causative agent and even then it wouldn't be overwhelmingly conclusive proof. Too many variables to take into account.

Regards

John Barnard

But, with rare exceptions, "DJ choice" programming ended with the
progressive stations of the late 60's. Except for, perhaps, KPIG, anyone
doing it is also losing in the ratings.

I am curious if station sign-on and sign-off announcements are required by
the FCC ?
I ask this, because I have noticed several daytime only stations recently
that do not make any type of announcement at sign-off
They just kill the carrier afer the last commercial.  And they begin the
next broadcast day with programming, sometimes not even a legal ID.

Just curious about this.

Maybe the areas around transmitters are clear of trees. You get a lot more absorption of sunlight on your body than of any AM signal, which is much lower in frequency. Also, sunlight is a demonstrated cancer risk. Better stay in the dark.

One of the issues with most FM arrays with gain is that, for many, the spacing
which

results in the array having gain also results in a fairly pronounced hot-spot directly above the antenna, where few people would be expected to be, as well as directly below, where technical personnel might spend a substantial amount of time.

Personally, I think that the AM radiation hazards are overstated in this study, and that the issue comes more from environmental circumstances by virtue of the fact that many AM transmitter installations share the same area as other industrial concerns.

-----------

Also - most FM broadcast transmit antennas are arrays of several elements in
a vertical stack to concentrate radiation in the horizontal plane.  As a
result the radiation directed around the tower base is much lower than the
station's licensed power.

Yes, but researchers can also sift through 80 years of public health records. The people who have, or had, leukemia are known. It shouldn't be hard to find out who lived near a radio transmitter and for how long. It might be interesting to ask veterinarians about animal leukemia, since many transmitters are located in rural areas.

But, since this story is being treated as news, I don't think there are even any "rural legends" about a connection between leukemia and AM radio transmitters.

Let's not forget that perfectly random chance is going to usually give us lumpy results. A perfectly smooth map of leukemia cases would be something like flipping a quarter ten times and getting exactly a h-t-h-t-h-t-h-t-h-t result. It could happen, but any lumpy combination is just as likely, and there are more lumpy combinations to go around.

Random chance alone might give us some leukemia hot spots. Some of those hot spots might be near AM transmitters. It'll be interesting to see if other leukemia hot spots are around AM radio transmitters, or if is just one of those weird number things.

Brother Stair used to say that the Internet was Satan's entryway into the home. He seems to have softened his opposition lately. His website has a page accepting donations using credit cards and paypal.

>
> Also mobiles may ruin the brain. The consequences could be disastrous.

Mobiles as cellphones?  Yes, there's no need to do studies to observe the
brain damage caused by those evil things.  Just observe the cellphone addled
drivers as they careen from one close call to the next.  The damage is
self-evident.  Well, I don't need no stinkin' cellphone to damage my brain.

I'll stick with shortwave radio.

the field strength of AM radio stations is measured in volts (microvolts)
not watts.

the field strength is inversely proportional to the square of the distance.

any study that relates any form of radiation, electromagnetic or otherwise
that does not refer to quantities measurements AND duration of exposure to
some other effect such as Leukemia is worthless.

the rules:

PART 73_RADIO BROADCAST SERVICES--Table of Contents

Subpart H_Rules Applicable to All Broadcast Stations

Sec.  73.1201  Station identification.

(a) When regularly required. Broadcast station identification announcements shall be made:
(1) At the beginning and ending of each time of operation, and
(2) Hourly, as close to the hour as feasible, at a natural break in program offerings. Television and Class A television broadcast stations may make these announcements visually or aurally.

a lot of AMs are being automated. the transmitter controller is simply programmed to shut down (and turn on the next morning) independent of programming.

what you are hearing  may be a case of nighttime power/pattern change where you are outside the  night coverage area.

often the nighttime power of former daytime stations is only a few watts

there is no requirement to announce anything when switching patterns/power

The rules, as I understood them when I cared (73.1202)  was that the station ID was
to be aired at the beginning and end of transmission, as well as "as close to the hour as possible in a natural break in programming."  I think this is by international treaty, not that it's observed by many North American stations.  The station address, contact information and national anthem, therefore, are entirely optional, abeit customary, for most stations that actually sign off.   And your experience is typical.

This rule, or a variant thereof, also applies for auxiliary (Part 74) operations, such as studio-transmitter links.  There, the hourly ID for the main programming serves to ID the auxiliary STL, but once programming ceases on the main programming,
the STL needs to be ID'ed every hour with its own calls if it remains on.  And the form for those, by the way, are quite explicit in their delivery.  STL WAP-470 in Thistown is, like the requirement for the main channel's calls, to be ID'ed double-you-ay-pea-four-seven-zero thistown, not "WAP-four-seventy" or other cute variants.  Keep in mind, too, that the location is the political entity of the station's STL transmitter, so that a station licensed to Thattownoverthere with studios in Thistown would ID the STL as I've described.  For Remote Pickup links,

the
facility is to be ID'ed in exactly the same manner.

A legal ID is required at the beginning and the end of "each period of
operation."  (See 47 CFR �73.1201.)  Otherwise, no announcement (such as the
old statement of ownership) is required.

Good news if one is lucky enough to find where to buy a digital radio for terrestrial reception. Except for satellite radio, terrestrial digital radio is a well kept secret. There is one digital AM radio station in the NYC area, WOR 710 KHZ, and no available receiver. I get a blank stare when I ask the so-called technical expert retail guy if their store sells digital AM radios. Maybe in the future there will be an after market auto radio capable of digital AM/FM reception and short wave DRM digital reception.

Does (did) the same thing apply to TV? I remember, back in the days when most TV stations actually signed on and off, that some stations would get the legal requirement and the anthem out of the way at, say, 5 minutes before the hour, then return to test pattern until the top of the hour, at which time it would be brief, non-legal ID and then right into regular programming. Did "the beginning of transmission" have to be immediately before programming, immediately after the transmitter was turned on, or just any time before the first program of the day aired?

Howard

For sale:

(The "Radio Crazy" is baaaaakkkkk!) Hi!

Partial interest in AM/FM radio station in small coastal Alaska city. Lots of Summer tourists.

AM is 1 KW, non-DA, fulltime, low dial spot under 1,000 KHz. FM is class "A". There is no local radio competition.

This is a joint venture and there is an element of risk. You could lose all or part of your investment. (Legal disclaimer, "Big Brother" makes me do it! Hi!)

Active or inactive investors with at least $10,000 min. each are welcome. All investors would be on the board with full voting rights if desired. No individual can own more than 49 percent interest. This means me too!

Tel: (478)741-1710 in Macon, GA.

References:

a-My parole officer....Mr. Larson E. Rapp, c/o Zing Zing prision, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference: Brazilian Bandit Airways, Oshkosh Airport, Oshkosh, WI. Purchased a one-way ticket to Rio using all small and unmarked bills. Don't worry, flight will be after I have the investor's money!

(References in jest, deal is for real!)

I guess that's the difference between being a DISK JOCKEY and an AIR PERSONALITY.

To be honest (albeit blunt), most guys on the rock stations in 'those days' were terrible as air personalities.  Of course, there were exceptions like Tom Donahue and B. Mitchell Reed (both of whom came from a Top 40 background where they learned to be GREAT air performers BEFORE they learned music).

IMHO, selecting music does not really take any talent.  It takes KNOWLEDGE and knowledge can be learned.  You can't learn talent.  You either have it or you don't.  How many Dan Ingram's, Robert W. Morgan's, Dr. Don Rose's, etc. are there?  Not too many as far as I know.

Give me an air personality over a disk jockey ANY DAY!  You can train an air personality to pick music.  You can't train someone with little or no 'God-given' talent to be talented.

Just my .02.

J.J.

-----------------

This is true only when each element in the array has high relative field at +/-90 degree elevation, and the elements are vertically spaced about one wavelength apart.   Shorter vertical spacings reduce such radiation from these arrays.  Using 1/2 wave spacing reduces it to a theoretical zero at +/-90 degrees elevation (the zenith and nadir).

BUT, the great majority of FM broadcast transmit elements used today have elevation patterns with very low relative field at +/90 degrees.  An array of such elements also has low relative field at +/-90 degrees -- even with elements spaced at one wavelength intervals.  IOW, no hot-spots above and below the array.

Patterns of four element types in common use today, and an elevation pattern for a 6-element, 1-wave-spaced array of one type are included in the PDF slide show listed as Paper 10 at http://rfry.org.

And their retinas as well..... 900 mhz --- I can recall around 20 years ago (don't get on my case as to whether it was 16 or 22 or 18 years ago) but the FCC advised the amateur radio community that if you don't do something to increase your numbers, we're gonna have to start taking your VHF, UHF, microwave allocations away. This spectrum is too valuable for you to hold when your numbers are declining and you're not using them anyway.

They (FCC) discussed a codeless "communicator" license. The ARRL countered with a "Novice Enhancement" program, which satisfied the Morse Code fetish requirement, and, as it turned out, did not bring the 50,000 new hams per year into the service as they claimed it would. But anyway, IIRC, somebody's idea was to allow novices voice privileges on 902 Mhz, and it was not considered seriously , and one of the reasons cited was safety.

Right, but often times there are a large number of people living in high rise buildings near the FM antenna.  It's conceivable there are more people living in a high power FM radiation area than a high power AM radiation area.

----------------

Could happen in the odd case, but not usually.  FM broadcast transmit
antennas located on building tops normally have radiation center heights
that easily clear the tops of nearby buildings.  If they didn't, the
station's signal would be affected by shadowing (blockage) beyond the nearby
buildings, and have widespread multipath problems from reflections off the
building sides.  Competitive issues make this situation unlikely.

There is still no commercially-available equipment for the 902 MHz amateur
band that I am aware of.

Hi, We are setting an Internet Radio (Just House Music) up and we want
to get you as listeners...

If you want to listen you should have Winamp, you can get it from
http://download.nullsoft.com/winamp/client/winamp503_lite.exe

If you want to listen with CD Quality Audio and minimal bandwidth use,
you should have mp3PRO plugin for Winamp installed and activated, you
could get it from http://www.mp3prozone.com/assets/mp3PROAudioDecoder.exe
To activate just open Winamp, press control-p (Options-Preferences
Menu) and locate Plugins-Input, there you will see the THOMSON mp3PRO
Decoder... Dobleclick on it and check all boxes, press OK or Accept
and then Close...  That's all and it's free!!!

To play this new house music station just click here
http://Radio.LaMerma.com.ve or visit our website at
http://www.LaMerma.com.ve

Any suggestion will be helpfull

Amateur Radio Newsline=E2=84=A2 Report 1407 =C2=AD July 30,  2004

Amateur Radio Newsline report number 1407 with a release date of=20
Friday, July 30, 2004 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T.  The ham bands get clobbered by the sun and=20
some of the results are amazing.  Find out the details on Amateur=20
Radio Newsline report number 1407 coming your way right now.

(Billboard Cart Here)=20
=20
**

ON THE AIR:  GEOMAGNETIC STORM AND HAM RADIO

A huge geomagnetic storm has hit the Earth, wiping out a lot of High=20
Frequency communications.  At the same time its making the VHF and=20
UHF bands a veritable D-X playground.  Bill Pasternak, WA6ITF, has=20
more:

--

According to a propagation bulletin issued on July 25th by CQ=20

Magazine's Tomas Hood, NW7US, the estimated planetary K index reached=20 a level of 8, with the Bolder, Colorado K reading a level 7. =20 Translated into everyday talk, that's one heck of a solar storm and=20 it does odd things to radio communications.  All you need do is turn=20 on a 6 or 2 meter CW or SSB radio to hear it for yourself.

Solar storms bring with them an increase in Aurora and Aurora based=20 communications.  Reports over the VHF Reflector say that this one was=20 no exception.  According to Dave Wenner, K3KEL, in Benton,=20 Pennsylvania, his 150 watts to a homebrew 9 element Quagi antenna=20 made it possible for him to make dozens of 144 Mhz contacts.  These=20 ranged from Maine across to Missouri plus Nova Scotia, Quebec, and=20 Ontario Canada.  Dave's posting said that he did not work any=20 stations to the South but that they were there.  He says that he=20 heard K4QI in North Carolina's grid FM06 very strong toward the end=20 of the session.

Wenner's was typical of the reports posted to the VHF Reflector. =20 Many of them said that this was the best Aurora session heard in=20 years.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los=20 Angeles.

--

How long does a solar storm like this last?  NW7US reports that as=20 Saturday, July 25th progressed, the geomagnetic field again became=20 highly  active and reached storm levels.  He says that it has=20 continued to get more intense, reaching very high storm levels.  As=20 the week progressed more Aurora contacts were reported world -wide=20 with some on the 222 Mhz band and above.  (NW7US via VHF Reflector)

**

## PROPAGATION:  IS THE SUN HARMING EARTH

Meantime the CGC Communicator cites an interesting propagation=20 report.  One that says Greenland's ice cores indicate that the sun is=20 more active now than it has been at anytime in the past 1,000 years. =20

That report also says this has caused a warming trend here on Earth. =20 As a result of this and other solar observations the pseudo-science=20 doomsayers have been quick to jump on the gloom and doom bandwagon. =20

They are out there predicting dyer consequences for those of us=20 living here on the surface of our home planet Earth.  But is any of=20 this based on reality?  That's what RAIN's Hap Holly asked CQ's=20 Thomas Hood, NW7US:

--

Audio report only.  Hear it in the MP3 version of this newscast=20 downloadable at http://www.arnewsline.org/quincy

--

Hood says that you should enjoy the radio talk about the phenomena=20 but not to take it seriously.  (CGC, RAIN)

**

## ON THE AIR:  THOMAS HOOD ON RAIN

By the way, you can learn a lot more about radio propagation and the=20 effects of solar radiation on communications from Thomas Hood on this=20 weeks RAIN Report.  Its available right now on-line at=20 www.rainreport.com or on the phone at 847-827-7246.  You can read the=20 article referred to by the CGC Communicator at=20 http://news.bbc.co.uk/2/hi/science/nature/3869753.stm (CGC, RAIN)

**

## VHF AND ABOVE:  ARRL MULLS CVHF/UHF CONTEST RULES CHANGES

ARRL Director Tom Frenaye, K1KI, has also posted some interesting=20 information to the VHF Reflector.  He says that says that the work=20 done by the VHF-UHF Contests/Awards Subcommittee has been=20 completed.   That the written report and along with some in-person=20 additional comments were given during the ARRL Board's Program &=20 Services Committee meeting on July 15th.  That's just before the ARRL=20 Board meeting that began on July 16th.    =20

Frenaye says that the Program & Services Committee did not take=20 action on the report and will study it during the next several=20 weeks.   In the mean time, the committee agreed with him that the=20 report should be posted to the VHF reflector public consumption.  It=20

will also be sent to the Contest Advisory Committee for information=20
and possible comment.

What will happen from here?   Frenaye says that the Program &=20
Services Committee will work with the Membership Services Department=20
in Newington to take the recommendations any further.  He says that=20
some rules may changes and some may not.   Except for possible=20
changes to the 2004 E-M-E contest, K1KI does not  believe you'll see=20
any major contest VHF changes until 2005.  He also notes that some=20
recommendations may have to wait until budget resources are made=20
available.  The full ARRL Board does not normally get directly=20
involved in contest rules issues as contest rules are usually not=20
policy matters.  (K1KI via the VHF Reflector)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline,=20
heard on bulletin stations around the world including the K8KZO=20
repeater serving Portage Michigan.

(5 sec pause here)

**

HAM RADIO IN SPACE:  ECHO ON THE AIR

I'm Bruce Tennant, K6PZW, with some breaking news that hams worldwide=20
have been waiting to hear.  This, as AMSAT announces  that its new=20
Echo satellite, now renamed AO-51 will be turned on for general use=20
in FM repeat mode on July 30th at about 02:15 UTC. =20

Echo will be on for a trial period of about three weeks.  During that=20
time command stations will be watching the power budget and adjusting=20
the UHF transmitter output as needed for management of the battery=20
supply.  Initially, the transmitter will be running at about 1 watt=20
but if all goes well it will be slowly increased during the trial=20
period.

Echo's uplink is 145.920 MHz using FM voice with 67 Hz PL tone=20
(CTCSS)  required.  The downlink is on 435.300 Mhz, also FM voice. =20
And like many terrestrial repeaters the downlink transmitter will=20

only come on when it hears an uplink signal with a 67 Hz PL tone for=20 about 1 second.  After the uplink signals drop away the downlink=20 transmitter stays on for 10 seconds.   After that, the downlink=20 signal goes away.  You might say that the operation is just like a=20 terrestrial FM repeater with a 1 second kerchunk filter and a 10=20 second hang time.  The only difference is that this one is circleing=20 the Earth in space.

Norm.  (AMSAT)

**

## RESCUE RADIO:  UK FIRE EVACUATION BRINGS OUT HAM RADIO

RAYNET, the United Kingdoms version of RACES was recently called out=20 during a very hazardous materials fire.  Jeramy Boot, G4NJH, has the=20 details:

--

On Monday the 5th of July at 19.55 BST Lancashire Emergency Planning=20 called-out Rossendale Raynet to attend a Rest Centre in Colne.  A=20 fire at a building that contained an acetylene cylinder meant that=20 local residents had to be evacuated.

About 40 people went to the Rest Centre but the majority were able to=20 find accommodation for the night with friends or relatives. Social=20 Services arranged accommodation for the remainder. Rossendale Raynet=20 was stood down at 22.08 when the Rest Centre closed for the night.

Im G4NJH in Nottingham.

--

There were no injuries reported and the ham radio system worked=20 flawlessly.  (GB2RS)

**

## ENFORCEMENT:  FCC INVESTIGATING 1999 EXAM SESSIONS

The FCC has ordered thirty-seven hams to sit for retests.  This, as=20
part of an ongoing investigation of ham radio examination sessions=20
held in Yucaipa, California, back in 1999.

The tests under government scrutiny were administered by a W5YI exam=20
team.  The exact test dates involved are those held on February 27th,=20
March 27th, April 24th, May 22nd, June 26th, and July 31st of 1999. =20

This is one of the largest retest orders issued since the all=20
volunteer testing program got underway in the early 1980's.  (FCC)

**

ENFORCEMENT:  HAM SURRENDERS LICENSE

A now former ham involved in a licensing investigation has turned in=20
his ticket to the FCC.  The Agency's Daryl Duckworth, NN0W,  explains:

--

Frank C. Richards of Moers, New York, submitted his license KG2IJ for=20
cancellation.  In November of 1995 he had requested that the call=20
sign KB4VU be changed to the next availlable and that the address be=20
changed to Plattsburg, New York.

--

The FCC says that the call KB4VU actually belongs to one Frank C.=20
Richards of Ft,. Meyers, Florida.  It says that this Richards has=20
never lived in New York and never requested that his callsign or=20
address be changed. =20

After an investigation that lasted almost five months the New York=20
Richards surrendered his ticket to the FCC on June 23rd.  The FCC=20
acknowledged receipt on July 6th noting that the Wireless=20
Telecommunications Bureau has canceled that license and no further=20
enforcement action is contemplated at this time.  (FCC, RAIN)

**

## ENFORCEMENT:  $11,000 FINE AFFIRMED AGAINST CALIFORNIA HAM

The FCC  has affirmed an $11,000 fine issued to a California ham. =20
One whom the agency says caused deliberate interference to repeaters=20
and then refused to accept several certified letters from the=20
Commission.

The target of the now affirmed fine is Daniel Granda, KA6VHC, of=20
Whittier California.  As previously reported, back on March 31st the=20
District Director of the Commission's Los Angeles Field Office issued=20
a Notice of Apparent Liability for Forfeiture alleging that Granda=20
deliberately interfered with two different repeaters.  It said that=20
when FCC notices were sent by Certified Mail, they were returned as=20
unclaimed.  But the FCC says that copies sent by regular first-class=20
mail were not returned by the post office.=20

The fine is $7,000 for the alleged interference and $4,000 for not=20
responding to FCC notices.  Granda was given the usual 30 days to pay=20
or to file an appeal.  (FCC)

**

## HAMVENTION: ARRL NATIONAL AND HAMVENTION COMBINE FOR 2005=20

Turning to the ham radio social scene, word that the ARRL has=20
accepted an invitation from planners of Hamvention 2005 to bring the=20
society's national convention back to Dayton. =20

According to General Chairman Gary Des Combes, N8EMO, ARRL Great=20
Lakes Director Jim Weaver, K8JE, called shortly after the recent=20
Board of Director's meeting.  Weaver told Des  Combes the League had=20
accepted the invitation to hold the next ARRL National Convention at=20
the 2005 Dayton Hamvention. =20

The combined show will take place next May 20th to the 22nd at its=20
longtime home.  That of coarse is the Hara Arena in suburban Dayton. =20
(Hamvention=C2=A9)

**

## CONVENTIONS:  K7UGA ON THE AIR FROM ARRL SW DIV CON=20

And the call sign of the late Barry M. Goldwater will soon be heard=20
again.  This, as special events station K7UGA takes to the air from=20
the Southwestern Division Convention in Phoenix, Arizona from August=20
27th to the 29th.=20

This will not only be a chance for convention attendees to operate=20
Goldwater's original Collins S-Line equipment but also to take part=20
in an oral history project about Senator Goldwater that will begin=20
recording at the show.  Also, Goldwater impersonator Ben Tyler will=20
attend the convention on Saturday afternoon to present his=20
Goldwater "Autobiography".

Again. it all takes place August 27th to the 29th in Phoenix,=20
Arizona.  We will see you there.  (SW Division Communicator)

**

BREAK 2

This is ham radio news for today's radio amateur.  From the United=20
States of America, We are the Amateur Radio Newsline with links to=20
the world from our only official website at www.arnewsline.org and=20
being relayed by the volunteer services of the following radio=20
amateur:

ARNEWSLINE=E2=84=A2 SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again here is Amateur Radio Newsline's=20
Support Fund Administrator, Andy Jarema, N6TCQ.

--

Continuing with our thank-you for June, we heard from Tim, N9TO and=20
Carol Toman, WD9CNW of Westmont, IL; Ted Tsucalas, W0RMJ of=20
Littleton, CO; Turning to CA, Leo Halog, KR6EG of San Francisco; Doug=20
Cannon of Livermore;  Monthly contributor William Walters, WA2IBM, of=20
San Jose; monthly contributor Scott Hensley of the Area=20
Communications Team, also in San Jose; Art Protas, KG6AY of West=20

Covina; John Rice, KE6YFV of San Pedro and the Rio Hondo ARC of=20
Whittier.

Thank you to everyone, and we promise to do our best to continue to=20
earn your care and support.=20

A reminder that Newsline is a 501(c)(3) and California non-profit=20
corporation. FCC regulations prohibit us from telling you exactly how=20
to support us, but that information is on our website at=20
www.arnewsline.org.  That address will be repeated at the end of the=20
newscast.=20

I'm Andy Jarema, N6TCQ.

--

Thank you Andy.  (ARNewsline=E2=84=A2 Support Fund)

**

CHANGING OF THE GUARD:  JOHN KRAUS, W8JK - SK

Some sad news to report.  Word that noted astronomer and antenna=20
designer John Kraus, W8JK, has become a Silent Key.  According to=20
reports from the ARRL and CQ Magazine, Kraus died on July 18 at age=20
94. =20

John Krasus was a member of the inaugural "class" of the CQ Amateur=20
Radio Hall of Fame, a world-renowned radio astronomer and the father=20
of the "Big Ear" radio telescope at Ohio State University.  In the=20
world of Amateur Radio he was perhaps best known as an antenna=20
designer.  His designs include the famous W8JK bi-directional wire=20
beam as well as the helix and corner reflector antennas often used at=20
UHF frequencies.  (ARRL, CQ)

**

KAHN STILL TRYING TO TEST CAM-D

Broadcast entrepreneur Leonard Kahn opposes the AM HD Radio IBOC=20
system and has long promoted his Cam-D system as an alternative.  In=20

his latest filing with the FCC for the IBOC proceeding, Kahn reveals=20
he tested his Cam-D system on Nebraska's 50 kilowatt KRVN at 880=20
kHz. However, he told Radio World Online that, some employees found=20
the sound unacceptable and the tests were discontinued. For more on=20
this story, see http://www.rwonline.com/dailynews/one.php?id=3D5511 =20
(CGC)

**

HAM RADIO IN SPACE: NEW KENWOOD ISS RADIO PROVES OUT FINE

The Amateur Radio on the International Space Station USA team has =20
successfully completed a comprehensive checkout pass of the new=20
Kenwood D700 radio system with Astronaut Mike Finke, KE5AIT. =20
Utilizing ground stations in Greenbelt, Maryland, Orlando, Florida=20
and Houston, Texas and linking team members in Kansas, Colorado,=20
Maryland, Florida and Texas, the ARISS USA team performed voice and=20
packet radio uplink tests to fully validate the Kenwood D700 system=20
for future school group operations.

During the East Coast pass, the ARISS team were able to perform=20
signal strength measurements and voice quality checks on 2 meters and=20
70 centimeters using the Kenwood D700 radio and the ARISS-built W A=20
One antenna system. Mike Finke provided the on-board feedback to the=20
team to help them understand how the=20
radio sounds on-orbit. Finke said that the signals from the 70=20
centimeter uplink signals were especially loud. (ARISS)

**

WORLDBEAT - CANADA: RESTRUCTURING ON ITS WAY

Back on Earth, Canada appears ready to restructure its Amateur Radio=20
service and work is well underway. =20

Following extensive discussions with Industry Canada, on July 23rd,=20
Radio Amateurs of Canada formally submitted its Proposal on Morse=20
Code and Related Matters to that regulatory agency. According to an=20
Radio Amateurs of Canada press release, little changed from the draft=20
proposal that was posted on the society's web site back in 2003. =20

Radio Amateurs of Canada says that it is now up to Industry Canada to=20
respond to the proposal. The current version is on line in both=20
English and French at www.rac.ca (RAC)

**

WORLDBEAT - MEXICO:  ALL N.A. ADOPTS U.S. HDTV STANDARD

Mexico has formally adopted the U.S. ATSC Digital Television Standard=20 based on 8 VSB technology.  This, for terrestrial broadcasting in=20 that nation. =20

Canada adopted the same standard in 1997.  The decision by Mexico to=20 go along with the U-S and Canada means that ATSC is now the North=20 American Digital Television standard.  ATSC was also adopted by South=20 Korea in November of  1997 and Argentina in October of 1998.  More is=20 on the web at =20 http://www.atsc.org/news_information/press/2004/PR_Mexico_7-7-4.pdf =20 (CGC)

**

DX

In D-X, word that husband and wife team EA3BT and EA3WL will be=20 active from the Gambia through the 4th of August. They plan to=20 operate as C56BT and C56WL on 40 to 6 meters SSB.  QSL as directed on=20 the air.

And Steve Burrows, M5BXB, will be on from the Czech republic as OK8XB=20 until the 6th of August. The OK8 prefix is quite rare, and Steve will=20 be attempting to make at least 1,000 QSOs on the HF, 6 meters and on=20 2 meter's from a portable location on Lysa Hora.  Thats site is 1,324=20 metres above sea level in grid square JN99FN.

**

THAT FINAL ITEM:  THE PHYSICS OF M&M'S

And finally this week the story of how a researcher with a sweet=20 tooth has changed science.  Amateur Radio Newsline Henry Feinberg,=20 K2SSQ, has the rest of the story:

--

Princeton physicist Paul Chaikin's passion for M&M candies was so=20
well known that his students played a sweet practical joke on him. =20
The left a 55 gallon drum of the candies in his office.  Little did=20
they know that their prank would lead to a physics breakthrough.=20
   =20
The journal Science says that the barrel full of the oblate little=20
candies made Chaikin think about how well they packed in.  A series=20
of studies have shown they pack more tightly than perfect spheres. =20
This is something that surprises many physicists and Chaikin=20
himself.  So Chaikin and his colleague, chemist Salvatore Torquato,=20
used the candies to investigate the physical and mathematical=20
principles involved when particles are poured randomly into a vessel.=20
   =20
The report in Science says they found that oblate spheroids like=20
plain M&Ms pack surprisingly more densely than regular spheres when=20
poured randomly and shaken. That spheres occupy about 64 percent of=20
the space in a container.  M&Ms manage to pack in at a density of=20
about 68 percent.=20

But one of the researchers had a more philosophical view of the=20
experiment.  Salvatore Torquato said that to him it is remarkable=20
that you an take this simple system with common candies and probe one=20
of the deepest problems in condensed matter physics.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, not to far=20
from Princeton,  New Jersey.

--
   =20
According to news reports, Mars Inc., which makes M&Ms, did not help=20
sponsor the research although it donated 125 pounds of M&Ms to the=20
two scientists.   (Journal of Science, Science Online)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ=20
Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands,=20
Rain, the RSGB and Australia's W-I-A News, that's all from the=20
Amateur Radio Newsline(tm).  Our e-mail address is newsline=20

28 July 2004

Clear Channel are leading American radio and speeding up the industry's adoption of digital technology and has agreed a deal to make 1,000 of its stations digital. The broadcaster will use the iBiquity, in-band HD system, developed by iBiquity Digital Corporation, a company in which Clear Channel has a small interest. By 2007 San Antonion-based Clear Channel expects to convert 95 per cent of its 1,200 AM and FM stations to digital in its top 100 markets, which include the Baltimore-Washington area, as well as New York and Cincinnati. Initially the conversion will cost about �70,000 a station, but the price is expected to decrease as the R & D costs are reclaimed.

## DJ's Book Reveals Inside World of Radio

The Radio industry will no longer have any "private parts" once readers finish "The Cash Cage", a new book by Corey Deitz.

Deitz, a 25-year Radio veteran, dishes the dirt on an army of wanderers who spin tunes, give the time and temp, take the requests and when the pressure is on are easily discarded by a cutthroat business that disguises itself as your favorite song.

"I wrote this book for both listeners and people in Radio," says Deitz, "because in this business the real show starts when the mike turns OFF."

Corey Deitz has hosted radio shows in Chicago, Cleveland, Columbus, Richmond, Virginia Beach, St. Louis, Toledo, Little Rock and other cities. He has experienced all facets of the Radio business from top to bottom.

"The Cash Cage" reveals it all: the deejays, the egos, the backstabbing, the celebrities, the glory of winning and the dejection of failure.

>From practically living in poverty in Pennsylvania to being fired and given a year's severance pay in Chicago, Deitz's casual and humorous style ushers the reader behind the scenes of a business where logical decisions are sometimes "missing in action".

"The Cash Cage" is a captivating trip through an exciting medium held together by an odd lot of gypsies who move from city-to-city in an incessant struggle for ratings, income, and acceptance.

Deitz's story is also a "how to" manual on confronting life head-on. Based on his own accumulation of hard-knock knowledge, he offers a good dose of street smarts, wisdom, and philosophy from which anyone can benefit.

That's very interesting Bill.  I wish you the best with your project.
I too have always wanted to establish my own radio station.  I was a
radio dj in tx, fl, or, and calif for nearly 20 years and am currently
"broadcasting" an internet radio station.  But, you know as well as I
do that an internet station is still just "pretending".  I'm going to
have to research this Part 15 stuff more.

Apparently no one sits up and takes notice unless Clear Channel does something.

Clear Channel is far from the first US broadcaster to commit to digital. Entercom, Cumulus, Infinity, Greater Media and others have been on top of this for almost a year now.

The Univision stations in LA have been on with IBOC since December, 2003 and have 6 other stations in operation now. That is 15% of the total stations the company owns at mid-2004.

By Kathleen Kingsbury
CNN
Tuesday, August 3, 2004

When Mike Alden first tuned in to satellite radio, he simply could not turn it off.

"I was sleeping less than four hours a night," said Alden, who subscribed to XM Satellite Radio in June 2003. "I'd gotten so sick of FM radio's cookie-cutter programming. XM is a music-lover's paradise."

I haven't heard anyone talk about reception quality yet. I had a friend who got Sirius at about the same time I got XM. We took a drive from the San Francisco Bay Area to Lake Tahoe. His Sirius radio suffered far more dropouts (mostly in forested areas and driving through extensive underpass complexes) than the XM. I also thought that the XM had a slight (VERY slight) edge in audio quality. Both sound like a well-coded MP3 to me. Certainly not the quality of an uncompressed CD - the highs have that weird digital sound to them. But both are listenable.

Anyone else have any experiences they would like to relate RE: reception?

Dave B.

Thank you, Dan. It sounds like you've been heard many places. <G>

For Part 15 broadcasting, check out...

The forums at:

http://www.part15.us

Also check out:

http://www.lpam.net

(The forum at the above is broken, but can't get fixed unti lthe web host finishes his move cross country.)

Also check:

http://www.lpam.8m.net

And the Bulletin Board at:

http://www.ramseykits.com

All of the above are just for starters. <G>

Best wishes,
Bill in SE Texas

The US Naval Air Systems Command Aircraft Division (NAVAIR AD), Patuxent River MD 4.5 Department, has a cometitive requirement to acquire transmitter components for Modular Commando Solo (MCS) Program. These transmitters are to employ Commercial Off-The-Shelf (COTS) / Government Off-The-Shelf (GOTS) technologies only and will ultimately be configured on pallets for a Roll-On Roll-Off (RORO) capability for EC130J's.

Hello

Recently I've been looking for a solution to listening internet radio
stations (and other radio station which broadcast in internet )
without computer or eventually with turned on any server but without
siiting next to a screen to changed a channel.

I've heard about Philips Streamium product but it offers limited
quantity if channels.
There's other Sony product which enables connecting with computer
without cable and listening to the music in any place but I suppose it
still needs to changed channels in the computer.

The best solution I've found was dLAN Audio made by Devolo.
It's  wireless LAN which uses electric net and sockets in the house in
transferring.
It's possible to listen to any radio station from the Internet without
computer.
Unfortunately there's not possibility to assign more than 4 channels
so if I want to change to other radio station I've to change settings
using computer.

Kuba

By Don Eriksson

August 04, 2004
Pepperell, MA

During the Cold War, one beacon of freedom throughout the Middle East and eastern Europe was the Voice of America (VOA), which brought newscasts and special programming to people behind the Iron Curtain and in the Middle East.

Between 1952 and 1964, a key link in the broadcast chain was the U.S. Coast Guard Cutter Courier, a vessel equipped with extremely high-power broadcast equipment (for its time) that acted as a repeater station from its berth in Rhodes, Greece.

For two years, from 1958 to 1959, David Newell of 42 Mill St., known locally for the bass boat repair business he ran after his retirement as an infrared research and development specialist for the Air Force, was an electronic technician on the Courier.

Nashoba Publishing / John Love, David Newell of Mill Street, Pepperell, shows a photo of the U.S. Coast Guard Cutter Courier, a floating repeater station for Voice of America radio and short-wave broadcasts during the early days of the Cold War, on which he spent two year' duty.

For several years, Newell has organized reunions for crew members of the ship. Lately, he has been drawn into a battle to keep VOA funding and programming alive, prompted by the efforts of a former shipmate, Fred Haney, to restore broadcasting hours, funding and creditable programming.

According to Haney, U.S. international broadcasting is seriously threatened at a time when a strong, substantive voice is important. Broadcasts to the Middle East and Islamic people have increased, but pop music networks have replaced comprehensive news reporting and analysis.

Language broadcasts to most of Central Europe have been abolished, and during critical hours, the VOA doesn't broadcast in English, he said. The longtime VOA director of Central News, Andre DeNesnera, was relieved of duties this month, Haney wrote to Newell.

Haney blames actions taken by the Broadcasting Board of Governors, the oversight entity for U.S. international broadcasting, for limiting the scope of the VOA since the 9/11 terrorist attacks. Some 450 current VOA employees are circulating a petition through Washington, D.C., demanding Congress investigate the Broadcasting Board of Governors' actions.

Newell said he is helping Haney contact the older VOA crew members.

Newell's tour of duty on the Courier is an interesting and little-known piece of American history.

The 338-foot, 5,800-ton Courier was launched as a cargo ship for the Maritime Commission in 1945. In 1950, the Truman administration became interested in a sea-going radio relay station, and so the Courier was converted in 1951.

The ship was fitted with three locomotive-type diesel engines to drive three 500-kilowatt A/C generators, a 150-kilowatt medium wave transmitter, two 35-kilowatt short wave transmitters, and its own studio.

"When we were broadcasting, there was so much RF [radio frequency] it would arc through the wires of ships that came too close, often starting fires," Newell said. "We could hold up a florescent tube and walk off the ship with it lit up. It freaked the Greeks out."

At first, a 69-by-33-foot barrage balloon was used to fly broadcast wire high over the ship. Newell said that stopped after two broke away, one of them later returned from Turkey 20 miles away, the missing pieces of material shaped as shoe soles.

He also told a story about playing with Soviet jammers over 10 to 12 broadcast feeds from the ship, and one about an emergency trip to a Turkish cove to avoid a Soviet submarine that was allegedly sent to sink the Courier.

"They had jammers on all frequencies and tried to pick up weaker feeds due to medium frequency skips," Newell explained. Skips are signals that transmit into the atmosphere, but come down somewhere else because of ionization in atmospheric layers, he said.

"We were not allowed to broadcast in open water because that is illegal," Newell said.

"The VOA archives in Washington have a stack of mail from people in Communist Europe [who were affected by the broadcasts]," he said. "At the 1992 Williamsburg reunion, we got a unit citation for our efforts in bringing down the Berlin Wall."

The ship used to broadcast in 16 languages to the Middle East and former Communist block 10 hours a day. The VOA still operates, broadcasting in 44 languages.

When the Courier was decommissioned, her equipment was set up on a hillside on Rhodes. Newell spent a year repairing radio and radar stations up and down the East Coast before leaving the Coast Guard. "It was great duty," he said.

He went to work at the Lowell Technical Research Foundation, building electronic equipment before signing to work for the Air Force. There, he worked with infrared sensing equipment.

He said he once tracked heat signals from a cruise missile from a KC-135 jet which flew beside the missile for 1,000 miles from the Pacific, over California and into Utah. During Operation Desert Storm in the early 1990s, he flew sensing equipment from Hanscom Air Force Base to Iraq to see if anthrax could be detected.

"We knew Saddam had anthrax and had bought 600 disseminators in Italy," Newell said.

Now retired, Newell works with Haney and others on the VOA project and said he has heard the petition has caused quite a stir on Capitol Hill.

In an e-mail to Haney, Newell wrote, "Without the Voice, we have little input in broadcasts to the Islamics in the Near East and other countries in Africa and Far East. This, in my opinion, would be a travesty, as without the VOA, the only broadcasts to the poorer inhabitants of these countries would be the Taliban and the rest of the radical rabble.

"Many of our now Islamic supporters listened to the broadcasts of my ship, as we spent many hours of broadcast time with Islamic languages," Newell added.

"Dave Barnett" <davencinNO@SPAMtdl.com> wrote in message news:ceou7c$99n$1@xuxa.iecc.com...

> I haven't heard anyone talk about reception quality yet.  I had a friend who got Sirius at about the same time I got XM.  We took a drive from the San Francisco Bay Area to Lake Tahoe.  His Sirius radio suffered far more dropouts (mostly in forested areas and driving through extensive underpass complexes) than the XM.  I also thought that the XM had a slight (VERY slight) edge in audio quality.  Both sound like a well-coded MP3 to me.  Certainly not the quality of an uncompressed CD - the highs have that weird digital sound to them. But both are listenable.
>
> Anyone else have any experiences they would like to relate RE: reception?

Sirius (which is the only service I'm familiar with, as I subscribe (and I own stock..a very small stake...in the company, in the spirit of full disclosure) seems to devote more bandwidth to those services which would benefit by it...the classical/symphony/jazz channels sound as good, if not better, than FM and compare favorably to CDs.  The voice-based channels (NPR, TWC, ESPN, etc) aren't as good, as well as some of the rock music channels, and compare reasonably well to 16-32kbps RealPlayer streams.

Keep in mind that the codecs used for these (because of frequent dropouts, under viaducts and trees, etc.) are dropout-resistant.  I don't know how it's done, but apparently the receiver buffers some five seconds of audio, and has a passing shot of filling in a dropout within that time.  Trees, as Rich Wood has noted, are a problem in the summer in those areas too far out from the metro.  Sirius seems to have installed terrestrial repeaters (I know that I got Sirius halfway through the Squirrel Hill tunnels in Pittsburgh...a 6000 ft tube...which can only be explained this way) so coverage in cities where this has happened may be better.

Sirius does claim to have better audio than XM, which may only be the case on those programs already noted....they really are QUITE good.  But beyond that, the decision should, probably more than anything else, be based on what programs are available.

Since Sirius has NPR Now and NPR Talk, PRI, BBC World and WRN (and soon, CBC
English
and French radio as well as two Canadian music channels) the decision, for me, was
a
no-contest.  Not that I use it, but Sirius also has their music channels streamed
on
the 'net.  I thought they sounded quite good (as good as any other stream, anyway)
but others here can't stand it.  Truth be told, one of the reasons why I don't
listen
to the music channels on the 'net, is because I can't stand the way they sound,
either, but I've often been called a golden-eared bastard.  Your results may vary.

Dear Group:

I am associate producing a documentary on the life and career of Irving Thalberg (Head of MGM Production in the 30's) for Turner Classic Movies. The film will air in Feb. of 2005.

We are looking for radio announcements of Thalberg's death. On September 14,15, or 16 1936. KFI-KECA had a 15-minute program narrated by John Hallern commemorating Thalberg's life.

Thalberg died on September 14 and the funeral was held on the16th 1936. Also, KEHE-Hearst Radio was the first to broadcast his death and

KNX announced as well.Can you direct me towards anyone who might have
any of these?

Please e-mail me if you have anything.

Thank you,
Michelle Sullivan

There was a product called a "Kerbango" that never made it to market.
The company was bought by 3Com and then 3Com dropped all of their
consumer products around 2001 before it saw the light of day.

It was an internet radio, it had an ethernet port, tuning dial and a
volume control but otherwise looked like a real radio.

Someone announced the "first internet radio" on this news group a while
ago, it was a $1000+ hifi unit.

Geoff.

I just got Sirius a week ago, with the antenna properly located on the roof of my car.  I too have noticed occasional drop-outs under tree cover here in eastern PA.  It is a little surprising, but won't really be a problem on the highway.  I will be going to the Dakotas, Montana and Wyoming next month, and the high-latitude satellites should help coverage a lot in deep valleys as compared to XM.  The sound on the classical stations is reasonably good - I have checked it with headphones - and most problems relate to inputting it into the car radio.  But on the talk and rock stations, the digital artifacts are apparent.  But I could not care less on those.

Amateur Radio Newsline™ Report 1408 August 6, 2004

**

A WORD FROM THE ARNEWSLINE (tm) SUPPORT FUND

The following is not necessarilly for retransmission. I guess you already know that if you are hearing my voice on a closed-circuit advisory it means that Newsline is again facing a financial crisis. Well, you're right.

The solution to the problem really lies with you. Our world-wide all volunteer staff produces these newscasts for you. The all volunteer Young Ham of the Year Committee labors tirelessly each year to select a youngster to receive the Award. Joe Eisenberg, K0NEB, oversees the Newsline sponsored Roy Neal, K6DUE, Amateur Radio Mentoring Project database, doing so at no cost. The list goes on and on.

I too am a volunteer, but I have to be the realist. I'm the accountant who has to look at the bottom line and when it turns red, I have to say -- hold on -- there is no more money to continue. And that's about where we are right now.

So, here's the bottom line. If you want the newscasts to continue. If you want the mentoring program to continue and the Young Ham of the Year Award to continue, we need you to show it now -- right now -- through your financial support of Amateur Radio Newsline.

Remember that Amateur Radio Newsline is a federally chartered 501(C)(3) and California state not-for-profit corporation. This makes your donations tax deductible, whether you're an individual or a club. The address to send them to is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California 91066. If you missed the address don't worry. It will be repeated at the end of this week's report.

For now I thank you for listening, for responding and offer you this weeks newscast which follows immediately. (ARNewsline Support Fund)

**

Amateur Radio Newsline report number 1408 with a release date of Friday, August 6th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The B-P-L battelground expands in California and Texas while a U-K repeater is ordered off the air. Find out the details on Amateur Radio Newsline report number 1408 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: SAN DIEGO CA. UTILITY REPORTEDLY CONSIDERING BPL

San Diego California could be the next B-P-L battleground. This, as an informed source tells the CGC Communicator broadcast industry newsletter that San Diego Gas & Electric is considering the deployment of Broadband over Power Lines in its service area. Bill Pasternak, WA6ITF, is here with the specifics:

--

According to Gonsett's CGC newsletter, an informed source has told him that San Diego Gas & Electric's communication systems planners met recently and are seriously considering endorsing and sponsoring B-P-L on the unility's power distribution system. The newsletter also says that San Diego Gas & Electric is considering entertaining proposals to partner with vendors for one or more field demonstrations of B-P-L technology.

CGC says that these plans should be of concern to all users of the High Frequeny and low band VHF spectrum. This includes TV Channels 2 through 5 and possibly even Channel 6. The latter because spurious and harmonic energy could reach these higher frequencies.

According to CGC and its unnamed source, San Diego Gas & Electric is aware that deployment of B-P-L in its service arera could cause considerable radio frequency interference. Even so, planners at the utility still appear ready to proceed.

More on this as it develops. I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

Bob Gonsett is known on the ham bands as W6VR. He says that he has a call pending with San Diego Gas & Electric corporate communications department to determine the company's official position on BPL. Bob also says to stay tuned for updates. (CGC)

**

## THE BPL FIGHT: A TEXAS TRYOUT

Meantime, Larry Pollack, of the W5YI VEC reports that Central Texas-based Broadband Horizons has launched B-P-L operations in three Texas communities. The pilot projects were launched in mid-June in the towns of Blanco, Burnet and Weimar. According to Mike Steele, Burnet's City Manager, the community has had great success with the initial start-up. He says the city plans to expand B-P-L service it to additional parts of the municipality. (W5YI VEC)

**

## THE BPL FIGHT: A BIG WIN IN PEN YAN NY

Meantime the B-P-L test is over in Pen Yan, New York and it appears as if ham radfio has won this round. This,, with word that the broadband provider that's been testing B-P-L in Penn Yan reportedly plans to "move away" from that technology.

According to the ARRL Letter, the Western New York community of some 5000 residents has been considering various proposals with Data

Ventures to offer broadband service. A B-PL trial had been underway in Penn Yan for several months.

The village reportedly would get 10 percent of the generated revenue. Now, according to an article in the July 28th edition of the Finger Lakes Times Online, the provider is now proposing to employ wireless mesh "WiFi" technology instead of BPL and ARRL C-E-O Dave Sumner, K1ZZ, has already congratulated Penn Yan Mayor Douglas Marchionda Jr and DVI for going with wireless broadband instead of B-P-L. (ARRL)

**

THE BPL FIGHT: SPOKANE GOES WIDE AREA WI-FI

Spokane, Washington has also opted for Wi-Fi over B-P-L. This as that city inaugurates a wireless Internet access system covering 100 blocks of downtown Spokane.

The wireless zone uses new technology that allows Internet signals to be transmitted more than a mile. This is far beyond the traditional 200- to 300-foot range of previous Wi-Fi systems.

The Wi-Fi area is divided into a private network for use by the city and an open network for the public. Public users can connect for two hours a day at no charge, and subscription plans are in the works for extended use. One Eighty Networks provided the networking for the project. (Published reports)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world WR6ABD repeater serving Aptos California.

(5 sec pause here)

**

RADIO RULES: NO MORE "GROUP X" CALLSIGNS

The ARRL reports that the FCC is no longer issue 2 by 3 format vanity call signs that begin with the prefixes WC, WR, WK and WT. The Commission has acknowledged that it erroneously granted more than 150 WR and WC prefix 2 by 3 vanity call signs from 1997 through September 2003, when it began rejecting such call sign requests.

In the late 1970s, the FCC announced a new Amateur Service call sign assignment system. It provided four standard call sign groups, designated Group A, B, C and D, delineated by license class and issued sequentially with no backfilling. The FCC's Bill Cross, W3TN, recently told the nation's volunteer examiner coordinators that the FCC also had a "Group X." These included WC or RACES, WR repeater, WK and WT-prefix 2 by 3 format call signs reportedly reserved for special-use licenses.

The FCC stopped issuing repeater call signs in 1983 and ceased renewing RACES licenses in 2000. After the current vanity program began in 1996, several ham clubs sought new and formerly held repeater and RACES-type call signs. When the Universal Licensing System came along in August 1999, however, the FCC encountered some licensing system programming shortcomings, including the anomalous assignments of WC and WR prefix 2 by 3 call signs as acceptable formats.

When the FCC implemented programming corrections that halted the issuance of Group X call signs in September 2003, it did not advise the amateur community. As a result, several amateurs who filed for 2 by 3 WC or WR prefix call signs had their applications dismissed without any explanation beyond saying that the applicant's call sign choice was unavailable. That remains the case. The FCC has not indicated whether it plans to address the WC and WR prefix 2 by 3 call signs it's already issued.

In a related matter, the FCC's new Amateur Radio vanity call sign regulatory fee of $20.80 for the 10-year license term goes into effect Friday, August 6. All applications received at the FCC on or after that date must be accompanied by the new, higher fee. (ARRL)

**

## ENFORCEMENT: RIS ORDERS REPEATER OFF THE AIR

A 2 meter repeater in the United Kingdom has been ordered off the air after it was involved in an interference issue. The Leicestershire

GB3CF system which operates on 145.600 MHz, was closed down on Sunday the 25th of July following a request by the Radio Investigation Service due to an alleged incident of interference.

Service will be resumed as soon as investigations have been completed. The report did not say if the repeater was causing interference to other operations or if it was being interfered with. (GB2RS)

**

RADIO LAW: FEDERAL COURT RULES AGAINST CALIFORNIA CITY

Meantime, on this side of the Astlantic a big win for radio operations but another major loss for a city in its fight to restrict towers and antennas. Bruce Tennant, K6PZW, reports:

--

The attorney for a Rancho Palos Verdes California antenna owner says that his client won a clear victory against the city. This, following a recent federal district court decision requiring Rancho Palos Verdes to allow him to operate a broadcasting business from his unoccupied home. The judge also ruled that the plaintiff, James A Kay. Jr., may seek damages and legal costs.

And this is not the first major loss for the city. Earlier this year, the U.S. 9th Circuit Court of Appeals ruled that another Rancho Palos Verdes antenna owner could seek compensatory damages against the city. As previously reported, Mark Abrams, WA6DPB, said he will file a claim for damage to his two way radio business while he and the city fought numerous court battles over the right to regulate commercial radio frequencies.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Abrams has a 52 foot tall antenna tower in his backyard. The city has appealed the case to the U.S. Supreme Court. The full story is on-line at
http://pvnews.nminews.com/articles/2004/07/26/local_news/news1.txt

**

RADIO LAW:  AN ANTENNA FREE ZONE

A real estate developer in Australia has come up with some of the toughest property use restrictions ever dreamed of.  W-I-A Newscaster Graham Kemp, VK4BB, joins us with the details:

--

VK2WI have reported on a story that the Albury-Wodonga Development Corporation has set some restrictions on its new 40 block Thurgoona subdivision, near Albury.

Listeners to this WIA National News service  through the 146.75 repeater can shed any thoughts of establishing a  shack in the backyard, as the corporation has banned the erection of  free - standing garages or sheds.  One may also forget about erecting any antenna arrays as the corporation has also banned external TV antennas, any TV antennas should be placed under the  roof or be internal.

Satellite dishes are also under scrutiny; you can have one, as long as no one can see it!

For the Am ateur Radio Newsline, Im Graham Kemp, VK4BB.

--

With these restrictions in place the potential amateur radio activity, using external antennas, is virtually  impossible.  (VK2GJH via WIA News)

**

RESCUE RADIO:  WX4NHC ACTIVATED FOR HURRICANE ALEX

WX4NHC, the Amateur Radio Station at the National Hurricane Center in

Miami was activated on August 3rd. This, in anticipation of the arrival of the first major tropiocal storm of the 2004 hurricane season.

Named Alex, the storm was a catigory one hurricane when the WX4NHC came to life at about 10 a-m Eastern on Tuesday morning. Catigory one means the storm had sustained winds of 75 MPH. It was forecast to strengthen before tracking just off the coast of North Carolina on Tuesday afternoon.

The WX4NHC Group monitored the Hurricane Watch Net on 14.325 Mhz. It also took part in EchoLink and I-R-L-P Skywarn Nets that were operational during the approach and departure of the storm.

WX4NHC has maintained an active Amateur Radio Station at the National Hurricane Center for the past 24 years. Please visit www.wx4nhc.org/WX-form1.html www.voipwx.net for details. (CQ)

**

RADIO LAW: IMPROVING AIRSPACE SAFETY

Garmin, Inc. has been conditionally granted its request to use 978 MHz as an aircraft radio datalink frequency. The idea is to enhance flight safety by enabling aircraft in the same airspace to precisely track each other's movement, reducing the risk of mid-air collisions. Datastreams containing location, velocity, altitude and heading are valuable commodities in the arena of air safety. More is o-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1871A1.doc (CCG)

**

ON THE NET: TEENS SET WIFI RECORD

A group of teenage hamss from the Cincinnati area got an ovation at the recent Las Vegas DefCon hacker conference. This, after organizers announced that the winners of this year's Wi-Fi shootout might have broken a world D-X record for ground distance in establishing a 55.1-mile Wi-Fi connection.

Ben Corrado KC8RKO, Andy Meng N8MX, Justin Rigling KC8OIO and Brandon Schamer KG4NVK won the prize for greatest distance achieved for an

802.11b network.

The teens, all 18 and 19 years old achieved the record using an amplifier and homebrewed antennas on both ends.  This exceeded last year's distance winner by 20 miles.  Then, when they established that record, they turned off their amplifiers and broke the record for an unamplified connection at the same distance.

DefCon, in its 12th year is a gathering of hackers, security professionals and intelligence agents from around the world.  The Wi-Fi shootout, held for the second time, is among the most popular contests.  Six teams participated but it was ham radio know-how that came in number one.  (N0AX)

**

BREAK 2

This is ham radio news for today's radio amateur.  From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS:  GEORGE DILLON NAMED ASSISTANT CHIEF OF THE FCC ENFORCEMENT BUREAU

Some names in the news.  Word that George R. Dillon has been named Assistant Bureau Chief of the Enforcement Bureau.  Dillon most recently served as the Bureau's Engineering Advisor, assisting the Bureau Chief on a wide range of public safety, technical and management projects.  He also represents the Bureau on the Commission's "Engineering-in-Training" Board, for which he received the Chairman's Special Achievement Award, and was the principal leader of the Knowledge Sharing Program, which permits field engineers and headquarters engineers to exchange information and expertise.  He is also a member of the Spectrum Policy Task Force. FCC)

**

## NAMES IN THE NEWS:  G4IDE NAMED WINNER OF TAPR LIFETIME AWARD

And Tuscon Amateur Packet Radio has presented its Lifetime Achievement Award to Roger Barker G4IDE, of Lincolnshire, in the U-K.  Barker was honored for his work over the years in providing quality software for Amateur Radio operators that allows them to operate advanced digital modes without the difficulties once associated with these operations. T-A-P-R says that Baker's UI-View program is the benchmark by which all other A-P-R-S mapping software is compared to.   (VK2TDS)

**

## HAM RADIO IN SPACE:  NEW U-K HAM TRANSPONDER IN SPACE ANNOUNCED

AMSAT-UK has announced a new amateur band transponder project.  One to be launched as part of the European Space Agency's S SETI Express satellite.

The project was announced at the opening of the 2004 AMSAT-UK Colloquium by Dr. Martin Sweeting, G3YJO.   Sweeting expressed his delight that AMSAT-UK has been able to work with the European Space Agency to provide, at very short notice, an S band 2.4ghz transmitter.

The SSETI Express project is believed to be the first ever pan-European student satellite with over 100 students from more than nine different countries working on it.  The project is being coordinated and managed buy the Education Office of the European Space Agency. (AMSAT-UK, GB2RS)

**

## SPACE SCIENCE:  SMALLER ISS PRESENCE ANNOUNCED

NASA and its space partners have approved a scaled-down International Space Station with fewer astronauts and less science.  This,  so the United States can meet a 2010 deadline for ending shuttle flights.

According to news reports, the space agencies of Russia, Europe, Canada and Japan gave unanimous approval to a NASA plan that means the orbiting platform, now about half completed, will never become the beehive of scientific and commercial research once envisaged. In exchange, NASA will continue with plans to launch research modules owned by its partners, some of them already built.

The agreement means the station will never support long duration crews of seven astronauts, as originally planned. It will however be able to house at least four astronauts starting in 2009.

Phase one of the space-station was put into orbit in 1998. The first astronauts took up residence in 2000. (Published reports)

**

ON THE AIR: OH2B BEACON IS BACK ON THE AIR

Finland's OH2B beacon is back on the air after an absense of two years. OH2B is one of the eighteen stations in the world-wide five-band International Beacon Project network. It has already been heard in the UK on 14.100, 18.110, 21.150, 24.930 and 28. 200 Mhz. (GB2RS)

**

DX

In D-X, word that K4ZLE is returning to Uganda. He plans to operate as 5X2A through the 21st of August. Some effort will be made to operate on the lower H-F bands this year, mostly on CW. Activity is also planned for PSK31. (GB2RS)

And F6EAY is in Kabul, Afghanistan and has been issued the callsign T6RF. At present he is active only on PSK31. QSL as directed on the air. (GB2RS)

Closer to home K-7-B-V reports that he will operate portable VP5 from the Turks and Caicos Islands from August 9th to the 16th. The trip will have focus on 6 and 2 meter WSJT work during the Perseid Meteor shower that peaks around August 12. H-F will, of course, get plenty of attention as well. QSL direct to K7BV. (VHF Reflector)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, have you ever tuned in an owl? Yes, we said an owl. You know, tne find that go hoot in the night. Newsline's Joe Moell K0OV will tell you how.

--

It's been several months since I've advised you of opportunities for hams and scanner fans to help wildlife researchers tracking radio-tagged creatures. You can monitor these signals from your home or car. If you have direction finding gear, you might make a positive sighting. Right now, there's a need for ham help in the Denton and Collin County areas of Texas, where researcher Jennifer Johnston is releasing rehabilitated orphan Great Horned Owls into the wild. Six birds are on the air near 150 MHz as I speak, and more are expected to follow. We're also standing by for the departure of some young Burrowing Owls from their nesting places in Florida. A biologist from the University of South Florida wants know where they will end up. Nobody knows, but maybe you can help find out.

For all the details, including frequencies and ideas for equipping yourself for this project, go to www.homingin.com. That's HomingIn, as one word, homingin.com.

Thanks for your help. From southern California, where Burrowing Owls are raising their young in our own Imperial Valley, this is Joe Moell, K-zero-oscar-victor, for Amateur Radio Newsline.

--

Again that website is www.homingin.com (K0OV, ARNewsline(tm)

**

NEWSCAST CLOSE

Episodes 229-233
http://www.scriptsandscruples.com

Gretchen told her ex-husband, Jean-Carlos, that she did not want to see him again. Andrew asked Connie to go to a play with him. By the end of the week, Andrew had confessed his amnesia to Gretchen.

Todd and Hannah reunited at Mack's and they attended Clint's 16th birthday dinner together. Clint asked them if they were a couple. Clint filled Connie in on Dara's life with her drug-addicted mother. Connie wanted to call social services but agreed to wait a day while she checked into Dara's background.

Raven fell deeper into depression. Blake arrived to visit her and Matt showed up at Mack's door while Blake was upstairs with Raven.

Matt talked to Mandy who acted surprised Marty was missing.

Agnes called Father McMahon to discuss Rex's sexuality. She is determined to keep him from Perry. Meanwhile, Perry talked Rex into doing a story on ovarian cancer for Monthly.

Heidi listened to Charlie's song for Adriana and was moved. She went to visit Charlie and told him she was going to let Adriana hear the tape.

Alexandra took Lucas to Monroe, NY to see his father. They were knocking on his door by week's end.

I hope you don't regret that part.  My brother-on-law gave me the Kenwood plug-n-play unit, but I heard both this unit (through a modulator) and a full-deal receiver (another Kenwood) that had a 50w/channel amp (and thus, a direct connection from the Sirius headend) and the direct unit was sounded a great deal better than either the cassette insert method or the FM modulator.  Plus it came with a CD player and it was a d*** sight louder than the Honda stock radio I had before.  So I traded up, and Sirius/Best Buy made it all the more affordable by giving away the headend for free.

I could care, but as I said, there's a choice between listening to what's available in the remote areas (and I won't slam country or christian) but it's really neat to have the same programming (I'm still reluctant to say "station"....it is all Sirius,

after all) for the entire duration of a cross-country drive (except in tunnels)!

A Kerbango with a wi-fi antenna would be a helluva good product right now.

With a Sony cassette adapter, there seems to be a little loss of bass, but otherwise it is superior to the FM method, where I sometimes got adjacent-channel interference from a commercial FM station.  A direct connection would be nice eventually, but the cassette adapter will work in a rental car.  I got the Clarion SIRPNP, which is easily portable with an extra antenna.

Hello,

I am in the process of editing a song to submit to a local station for radio play.  Is there a list that anyone could direct me to of specific words or phrases which the FCC has taken offence to?  Any help would be appreciated.  Thank you!

There is no list.  That's a big part of the problem with this whole "indecency" crusade. You don't know what's "indecent" until somebody complains and the F.C.C's thought police agree with them.  Generally, anything referring to sexual or excretory functions could be considered "indecent," unless discussed in a strictly clinical context,and maybe even then.

As far as anyone's been able to determine, George Carlin's "Seven Dirty

```
Words" seems to comprise the FCC's no-no list.

Your local radio station will be more than happy to give you a list of what
THEY are comfortable with playing.
Just give them a copy of the lyrics.

wrote:

>Just wondering if anyone has been able to get an XM signal in their office.

It all depends on the following:

1) How thick the roof is

2) Does the roof contain a lot of metal
3) If you're close to a window, how close? (note, does NOT have to be a south facing window!)

I've used XM Radio in my house with very little problems. The secret is placement.

There is a signal strength meter that you can access via the menu (this is at least for the Delphi SkyFi receiver).

But there's a hidden menu that shows you better signal strength and helps in optimal placement.

On the Delphi SkyFi receiver, make sure the unit if off. Press the following on the keypad:

2 0 7 and then "Enter" (the XM button in the middle of the selection wheel)

The unit will turn on in the normal fashion. Press the display button several times. One of the displays will show

SAT 1  SAT 2  TERR

along with a number of squares, some of which may or may not be checked.

The BER (Bit Error Rate) is the one you want to look at. Make sure at least one of these has a BER of LESS than 3.0% (the smaller the better). Above 3.0 the system will have dropouts.

It doesn't matter which one you get less than 3.0, though more than one is ideal.

Just try it and see what you get.

Dave

Stay away from any of George Carlin's "heavy 7" and you should be OK.

What I want to know is, where is this station? Did they tell you they would accept it? Most stations in the USA dispatch such unsolicited material straight into the circular file. What is your "promotional budget" (hint hint)?

Office? Jeez...I use mine on a commuter train in the Los Angeles area. Yes,
if you have a window to the south or a terrestrial booster or repeater in
your town it will work. You CAN buy a Delphi Ski-Fi and try out the test
channels BEFORE you sign up, to see if it will work.
WAL*MART carries the XM Ski-Fi, as well as a car kit or home kit. The
"BoomBox" is also available.
Try it...you might like it...a LOT.

OBITUARIES

# Bill Ward, 65; Innovator in Radio Programming

By Dennis McLellan, Times Staff Writer

Bill Ward, former president of Gene Autry's Golden West Broadcasters and general manager of KMPC radio who helped spread the popularity of country music and auto racing on radio in Southern California as general manager of KLAC in the 1970s, has died. He was 65.

Ward died July 30 of an apparent heart attack at his home in Sherman Oaks, said his son, Cameron.

Known as a Southern California broadcasting innovator, Ward was hired by Metromedia in 1971 to program KLAC-AM, which had recently gone to a country music format; he was named general manager within a year.

At KLAC, Ward boosted the popularity of the station and country music in Southern California through programming and promotions, including bringing concerts to Los Angeles and Orange counties.

"At this time, country radio was either on daytime stations or very small, limited-signal facilities," said Carson Schreiber, KLAC's music director from 1971 to 1976.

KLAC, he said, "was the only station that covered all of Los Angeles and Orange County with a full 24-hour signal. Due to the success of KLAC and the country music format in a media capital such as Los Angeles, it also helped country music nationwide."

The success of KLAC, Schreiber said, resulted from playing "all types of country," a "blending of traditional and modern and pop, from Olivia Newton-John, John Denver and the Eagles to Merle Haggard, George Jones and Loretta Lynn."

During his early days at KLAC, Ward brought legendary Los Angeles sportscaster Jim Healy, who had been at the station in the early 1960s, back to do his 15-minute, afternoon sports commentary.

"There was talk at the time that Healy was totally inconsistent with the country format of the station, so it was kind of a daring move on Bill's part," said Healy's son, Patrick, a reporter for KNBC's Channel 4 News.

And yet, he added, "Bill read his audience correctly and not only did he get his country music demographic, he got a huge tune-in factor for the [sports] show every afternoon."

In 1985, after Ward became general manager of KMPC-AM, he hired Jim Healy to do what grew from a 15-minute sports show to a 30-minute program.

Healy did his last live show on KMPC less than three months before he died from complications of liver cancer in 1994 at age 70.

While Ward was still at KLAC in the early 1970s, the station earned a reputation as "the racing station" for its coverage of auto racing.

"That was part of Bill's strategy when the format changed to country," said Healy. "He saw this overlap in the demographics in people who followed auto racing and enjoyed country music: It was the same audience."

At the time, Healy said, NASCAR was big in the Southeast. And although NASCAR had a couple of races on the West Coast, he said, "nobody was really targeting a mass-media audience. It was very localized. Bill saw the opportunity of NASCAR spreading beyond the Southeast and was one of the first people to recognize that there was an audience for NASCAR in Los Angeles."

Ward obtained the rights to broadcast the races at Riverside International Raceway and Ontario Motor Speedway.

He also launched two auto racing news shows a week, providing young Patrick Healy with his entree into broadcasting.

Born in Italy, Texas, Ward landed his first job as a disc jockey at age 15. After working the all-night shift at WRR in Dallas while attending the University of Texas at Arlington, he was hired to do the morning show at WAKY in Louisville, Ky., in 1959.

In 1967, after stints at WPLO-AM in Atlanta and KBOX-AM in Dallas, Ward joined KBLA as programming director and changed the call letters to KBBQ and the format to country music. He became station manager in 1970 and a year later moved to KLAC.

But Ward, a past president of the Academy of Country Music, "wasn't just country," Schreiber said.

After becoming president of Metromedia in 1980 after a year as executive vice president, Ward presided over what Schreiber called "some of the leading alternative progressive-rock stations in America," such as KMET-FM in Los Angeles, KSAN-FM in San Francisco, WMMS-FM in Cleveland and WMMR-FM in Philadelphia.

Named president of Golden West Broadcasters and general manager of KMPC in 1982, Ward orchestrated the company's 1985 purchase of Los Angeles radio station KUTE-FM, which adopted a soft adult contemporary format with the call letters KLIT-FM. After a couple of other format and call-letter changes, 101.9 became KSCA-FM, Los Angeles' first Triple A (Adult Album Alternative) station.

Ward retired as president in 1997 after Autry sold KSCA, his last radio holding.

In addition to his son, a Toluca Lake resident, the twice-divorced Ward is survived by his daughter, Carmen Cashat of Mansfield, Texas; a half-brother, Joe Wardlaw of Longview, Texas; and a grandson.

A memorial service is pending.

these days the vast majority of radio stations have the ability to edit out the naughty lyrics.

if your song is worthy of airplay they will do it.

I have an original-model Sony XM working in an office on the 6th floor of an 8-story concrete/steel building. For this reason it has to work with what signal gets through the windows.  The windows are covered with a light-gray plastic film. XM performance was marginal. What signal there was came from a repeater. I've finally taped the antenna to the __outside__ of one of the west-facing windows and operation is flawless. I'm on the US east coast.

The gray plastic window film is a drastic microwave attenuator.  I've never managed to get a GPS to work in the office, even when held against the inside of a western window. In fact the GPS never saw more than one satellite.  I wouldn't have believed it if I hadn't run the experiment myself.

YMMV

Dirty Word Ban

To amend section 1464 of title 18, United States Code, to provide for the punishment of certain profane broadcasts, and for other purposes. (Introduced in House)

HR 3687 IH  108th CONGRESS 1st Session

H. R. 3687

To amend section 1464 of title 18, United States Code, to provide for the punishment of certain profane broadcasts, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

December 8, 2003

Mr. OSE (for himself and Mr. SMITH of Texas) introduced the following bill; which was referred to the Committee on the Judiciary

A BILL
To amend section 1464 of title 18, United States Code, to provide for the punishment of certain profane broadcasts, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1464 of title 18, United States Code, is amended--

(1) by inserting `(a)' before `Whoever'; and

(2) by adding at the end the following:

`(b) As used in this section, the term `profane' , used with respect to language, includes the words `shit', `piss', `fuck', `cunt', `asshole', and the phrases `cock sucker', `mother fucker', and `ass hole', compound use (including hyphenated compounds) of such words and phrases with each other or with other words or phrases, and other grammatical forms of such words and phrases (including verb, adjective, gerund, participle, and infinitive forms).'.

shit piss fuck cunt asshole cock sucker mother fucker ass hole

Hi

I am designing a High Sampling Rate Digital receiver with following
building blocks:
1-ADC is AD6645 105MSPS 14-bit
2-DDC is GC4016, 100 MSPS 4-ch
3-...

To design a good pcb layout for acheiving the claimed specifications
of the ADC i decided to use PSD to simulate this Mixed-Mode board.
Unfortunately, i am not familiar with this software, and i think it
take too much to be familiar with it.
My question is: Is it possible to use lower level softwares such as
P*otel to do this job?

Professinal answers are welcomed.

  Isn't the overwhelming appearance of impropriety enough to get the
FCC to investigate and see if there is proof? Finding proof, if it
exists, is their job.Why is providing proof left up to
non-investigative layman like you and me?
> > >

BTW, I tried out the SkyFi 207<enter> code to see the BER.  I find perfect
operation at 10% BER on at least one channel, and usually good performance
if at least two channels are better that 20% BER.

I have been working at a job this summer where I drive around a lot in my car, which gives me lots of time to listen to classic rock radio. (That's pretty much all there is, aside from a couple of country stations, and NPR, and one AM station which simulcasts Rush Limbaugh and Limbaugh Wannabes on several different AM frequencies.)  There seems to be a rather limited canon of songs which these stations play. Does anyone know who drew up the original list, and does anyone know how few songs are on the list?

I have a few observations about the list.  It does seem to be limited to acts and songs which charted high originally--- which means that influential acts who have been popular for a long time but had few if any high-charting hits are excluded (e.g., the Ramones, Talking Heads, the Clash, the Cure, Iggy Pop, Bob Marley, etc.)  But lots of acts and songs who did chart high are also excluded.

But even given that limitation, the choice of songs is odd.  For example, Eric Clapton was a member of several notable bands---Cream, Derek and the Dominoes, and Blind Faith--- but all of those bands are absent (even Derek and the Dominoes who featured Duane Allman.)  Only his solo works are included amongst the half-dozen or so Clapton songs in the canon.  Three of Clapton's cnonical songs are inferior cover versions--- i.e. his own solo version of Derek and the Dominoes' "Layla," his cover of the Beatles' "While My Guitar Gently Weeps" and his cover version of Bob Marley's "I Shot the Sherrif." (Clapton's cover versions are not terrible, but they are rather bland compared to the originals, which are preferable both from a musical and pop-hookiness standpoint. And the Beatles cover is less frequently repeated than the others, even though he in fact played on the original...)

The pop-radio canon is full of inferior cover versions--- Elton John's

"Lucy in the Sky with Diamonds," Aerosmith's "Come Together", and Manfred Mann's "Blinded by the Light" and "Spirit in the Night." (None of those four cover versions are horrible, but the Beatles and Springsteen originals are better, and hookier, and more popular!) In fact, another amusing example of the inferior cover version is Elton John's song "Don't Let the Sun Go Down on Me," which is played not in its original version but in a live version by George Michael where Elton John makes a guest appearance on the last chorus!

To get back to Clapton's few songs, I see that there is no attempt to pander to 2004 sensibilities.  When Clapton recorded the song "Cocaine", cocaine use was socially acceptable.  It isn't acceptable today, and yet the song is played over and over and over again.  Elton John's "Lucy in the Sky with Diamonds" is another example: in addition to not being one of Lennon and McCartney's greatest songs, it is about LSD, and the Beatles version is better and more popular.  And yet, this is one of the few hundred tracks in the canon.  Weird....

Comments, anyone?

An Evening of Madcap Music & Crazy Comedy!

THE DR. DEMENTO SHOW

AUGUST 15, 2004

Featuring: Special Guest Opener ELVIS PRESTELLO & THE DISTRACTIONS

B.B. King Blues Club & Grill
237 West 42 St NYC, New York
(212) 997-4144

Celebrating his 34th anniversary on radio, Dr. Demento's legendary show comes alive on stage with rare video footage and the Doctor playing all his favorite rare records and outrageous tapes from his extensive archives - some never heard before. He will tells stories and jokes and has a few surprises in store for everyone. Its sure to be an evening of madcap music and crazy comedy from the Doctor of Demented Musicology!

The Dr. Demento Show is a free-wheeling, unpredictable mix of music and comedy. Along with legends like Spike Jones, Tom Lehrer, Stan Freberg, Monty Python, and Frank Zappa, the Doctor plays new funny songs sent in by amateur and professional singers and comedians. That's how the world was introduced to "Weird Al" Yankovic, who went on to become rock music's best-known funny person.

Those who've listened carefully to the Doctor's show have undoubtedly realized that somewhere between his lively larynx and elegant top hat there resides the mind of a seasoned musicologist and dedicated scholar...a world-renowned record collector and music historian, whose lifelong passion for music of all kinds is reflected in his weekly selection of "rare records and outrageous tapes" for the Dr. Demento Show.

Wanted to buy: AM radio station.

The "Radio Crazy" is baaaaaakkk!!!! heh heh.

I want to acquire a "Dog" AM radio station cheap! It need not be profitable. It need not even be on the air as long as the FCC license is in order.

I prefer one with seller financing with little or no money down. I prefer with real estate.

No "pure" AM daytimers. Station MUST be authorized at least 50 watts at night.

I prefer that the station NOT be directional but that is not a must.

Any market considered.

Finder's fee paid to "snitches" if I actually buy or lease the station as a result of your tip.

Tel. (478)741-1710 in Macon, GA.

My email is: wrecktech@yahoo.com

It is with a heavy heart that we report that Hunter Hancock famous West Coast DJ here in Los Angeles passed away this past weekend after a lengthy illness. Hunter has been retired from Radio since 1967 -- But is credited to being the first DJ ever to have his own Radio show devoted entirely to Rhythm and Blues (then called Race Records) back in 1948.  Rock-it Radio was fortunate enough in the year 2000 to have Hunter return to the microphone for one show here on the Rock-it.  He was then in his early 80's but you would never know it by his show.  In his memory and a tribute to such a fine gentleman we are rebroadcasting that show and putting it in our archives under show #1034.  To tune into Hunter for one last time you can at:
http://www.palmsradio.com/rockittext.htm
And then click to show #1034.

RIP Hunter !!!

Bennie Dingo
Rock-it Radio
http://www.rockitradio.net

P.S. there is also a very nice tribute page to Hunter Hancock and his broadcasting history at:
http://www.electricearl.com/dws/hunter.html

For those that may be interested in having a Hunter Hancock broadcast we do offer a couple
at the Rock-it Radio Store at:  http://www.palmsradio.com/store.html

All sales of his items will go to make a nice arrangement at his service on behalf of Rock-it Radio Listener's.

One of my favorite singers recorded a song by one of my favorite songwriters. It became a monster pop hit, which was not common for him or for her. It was not one of his very best songs and it is not a song especially suited to her strengths, although it is a very good song and she sang it very well.

However, it is MUCH more likely that you will hear Janis sing "Bobby McGee" than anything else she ever did. Even though there are certainly songs that she did better and songs that were closer to her heart. "Turtle Blues" may be a my favorite but there are many others.

It is much more likely, except on a country station, that you will hear a Kris Kristofferson song that isn't "Me and Bobby McGee," even though he wrote many other great songs and "Sunday Morning Coming Down" makes him a cultural treasure.

Odd, isn't it?

Will in New Haven

```

One can only hope that XMSirius (yeah, they'll merge, eight to five by 2006)will kill the market value of local stations so that people who want to do radio can afford to buy them.

---

Putting MM on the dime would serve a lot of purposes. It would displace the devious FDR, send a signal to the Islamist world, make the currency more attractive, and be a thorn in the ass to the Kennedy Family, to name four good ones.

For sale:

Partial interest in fulltime AM radio station in Oregon.

(The "Radio Crazy" is baaaakkkk!!)

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Station is 1,000 watts at all times and non-directional. No real estate is included. Repeat, NO REAL ESTATE IS INCLUDED!!

Active or inactive investors with at least $10,000 each are welcome. Full asking price of the station is $100,000. (100 grand, kiddies!)

All investors would be on the board with full voting rights if desired. No individual can own over 49 percent. This means me too!

City is about 20,000 population.

Tel: (478)741-1710 in Macon, GA

References:

a-My parole officer.....Mr. Larson E. Rapp, c/o Zing Zing prision, Ossingstink, NY 12345-6789. Tel: 1-800-IMA-THUG.

b-Trade reference.....Brazilian Bandit Airways, Ohskosh, WI. Purchased a one-way ticket to Rio using all small and unmarked bills. Don't worry, I will not leave until all investor's funds are in hand!

The references are in jest, the station offering is in earnest!

We are seeking advertising sales professionals for one of the most well known music industry news broadcast networks around. The position is commission based only. You must have a history in Music or commercial advertising sales. Typically PR type sales people will excell in this regard. You must be able to dedicate at least 20 hrs/week and be able to close your own sales. The applicant is required to send a resume to be considered. We have the shows that draw advertisers and the names everyone knows are on our shows on a regular basis. We have had guests like D-12, Debra Cox, Lou Pearlman(Backstreet Boys/N-Sync) Our regular guests include Justin Prager program director of MTV, Mi2n News, The Future Of The Music Business with Steve Gordon (Former Head Of Business Affairs TV/VIDEO at Sony) Our shows are pro and so should you be. Please contact us soon, there will be limited applicants considered.

Ain't gonna happen. Even if XM and SIRIUS merge, they'll have only a fraction of the audience of terrestrial radio. The current subscriber count is less than 3 million and that's spread over 200+ channels.

I believe it'll be many years before satellite radio becomes a significant threat to radio. It'll take even longer before ad agencies get the kind of numbers from the channels that accept advertising. Agencies have to buy on environment rather than buying buy the numbers, as they're used to doing.

I have both XM and SIRIUS. I generally listen to Classical, Jazz, Oldies and a few other non-commercial channels. That means I'm unreachable by advertisers.

Rich

Hello Rock-it Radio Listeners,

Another 7 shows are in store for you this weekend here online at the Rock-it. They are shows #1033 to #1039 with the mix of 50's and early 60's Rock and Roll, Doo Wop, Rockabilly and R&B.  We sadly report the passing of a DJ legend as well in this newsletter -- Hunter Hancock and we feature as a final encore performance -- The show he did for us here with Lane Quigley back in 2000.
Also, for our East Coast listener's we have news of the upcoming Wildwood's Oldies Concert and our usual playlists of our latest shows.
And these shows are there for your listening pleasure in our archives website at:
http://www.palmsradio.com/rockittext.htm
We also have a new Heebie Jeebies show as well.  Out of the Netherlands.

To get things started here are the latest playlists of our latest shows right here on Rock-it Radio.

===========================================
Butchie Boy's Doo Wop Diner on Rock-it Radio show #1033

>From the High Desert of Southern California -- Littlerock, California to be exact -- Butchie swipes the scorpions off of his mixer board, flicks a tarantula off of his microphone and plays for you those great doo woppin'

memories.  Here is the playlist.

1.  Why  -  The Impalas   -  1958
2.  Rosabel   -  The Magic-Tones   -   1962
3.  Will you be my love?   -  The Four J's    -  1963
4.  Johnny   -  The Exquisites    -   1961
5.  Gonna steal your boyfriend away   -  The Teardrops   -  1964
6.  I need your love    -   The Enchanters   -  1958
7.  Spellbound by the moon    -   The Enchanters    -  1958
8.  I'm yours till the end    -   The Perrenials    -    1963
9.  When I dream    -  The Tokens  -    1958
10.  If I could make you mine   -  The The Love-Notes    -   1957
11.  Please let her   -  The Casinos    -  1960
12.  I love only you    -  The Nickels    -    1964
13.  Deeply in love with you   -   The New Invictors    -  1958
14. Come to me   -  The Shan-Tones    -  1955
15.  You are laughing    -    The Knockouts     -   1959
16.  Where are you tonight    -  The Cheerios    -  1960
17.  Cross my heart    -    The Themes   -  1957
18.  Such a fool was I   -  The Drippers   -  1959
19.  Little Angel face   -  The Premieres    -  1957
20.  Drive-in Movie    -   The Carousels      -   1958
21.   Adios          -  The Five Discs     - 1961

Yet more  of those righteous & rare Doo Wop tunes groovin' down from the high-desert of Littlerock, California- and that old gringo "Butchie". . .   THE cool spot to meet for Doo wopper's far-and-wide!
Like Butchie says he is a request taking machine!  So, if you have any Doo Wop songs that you like to hear in future shows you can e mail your request to him at:
ephone6@mindspring.com
And you can check out Butchie's own Doo Wop Diner website at:
http://216.119.98.249/butch/dowop/index.htm

===========================================
Tribute to Hunter Hancock on Rock-it Radio show #1034

Rock-it Radio is saddened to announce the passing of one of the most important figures in the growth of Rhythm & Blues during its infancy in the early 1950's - Legendary Los Angeles Disk Jockey Hunter Hancock (1916-2004).

In 2000, our Lane Quigley, from The Memory Lane Show, persuaded Hunter to "come out of retirement" and do another "Huntin' with Hunter" program, which aired as Rock-it Radio Show 197.  Although it had been 1/3 of a century since he had done a show, Hunter never missed a beat.  He was as energetic and corny as ever.

In tribute to the memory of this legend, we are reprising Show 197 and rebroadcasting it in our archives as show #1034, with a special introduction by Lane Quigley.  Lane shares his personal thoughts about Hunter Hancock:

"By the time I was born in 1949, Hunter Hancock's daily program was already on the air for over a year.  He had been on the air in LA since World War II, but it was in early 1948 that he was given a daily show on KFVD 1020-AM by a sponsor targeting Los Angeles' black population. He initially played big band and be-bop jazz, but a promoter from Modern Records suggested that he play this newer type of music that was being played in the juke boxes of South Central.

"It wasn't known as Rhythm & Blues at the time. The kinder moniker was Jump Blues. Most folks called it Race Music. Hunter's "Harlem Matinee" soon became the most popular show with LA's black population. By the early 50's, the music was known as Rhythm & Blues and his audience grew to include lots of young whites and latinos digging the sounds of Big Jay McNeely, The Robins, Johnny Otis, Earl Bostic, Ruth Brown, Jesse Belvin, The Clovers, Roy Milton and other great artists of the day. While New York may have been the center of the Doo Wop scene, Los Angeles was the hub of the burgeoning R&B field in the early 50's. His influence on the growth of rhythm & blues is immeasurable. And artists knew that Hunter Hancock's programs were THE place for your records to be heard.

"My earliest radio memories are of listening to Hunter Hancock every day. In his prime, he was broadacasting 8 hours a day on three different stations (KFVD, KGFJ and KALI). His program became known as "Huntin' with Hunter". He didn't have a classic radio voice, his jokes were as corny as you could imagine, but he had incredible charisma and energy that listeners loved.

"With the help of his long-time assistant Margie (the sister of The Platters' lead singer, Tony Williams), Hunter would carefully select the music he would play. By the mid-1960's, he was exlcusively heard on KGFJ radio. As the Civil Rights movement gathered force, new station management started to phase out this older, white DJ in favor of young, hip black jocks. Hunter became the vacation relief and sick-day fill in guy, and had a Saturday morning shift. However, his ability to select his own music was taken away. By 1967, management gave him his playlist that had to be strictly followed. Radio stopped being fun for Hunter during these years and in 1968 he had enough and quit radio altogether. He spent the rest of his working years as a salesman in an unrelated field.

"In 2000, The Southern California Doo Wop Society honored Hunter Hancock with a concert featuring a number of legendary 1950's artists. The outporing of love from the audience was incredible. Hunter was a humble man, and he was truly surprised that so many people even remembered who he was.

"I had the pleasure and privilege of becoming friends with Hunter over the past four years. I would speak to him regularly over the phone and visit him at his retirement home in Claremont when I could. Even as his health was failing, he remained kind, upbeat and funny. He was an avid photographer and loved to share albums of his favorite photos.

"I feel truly honored to have become friends with Hunter over the past few years. He is truly an icon of LA Radio. Long before there was Top 40, Color Radio, Boss Radio, More Hits More Often, Mega, Power or any of the other over-used adjectives, there was Hunter Hancock. A true legend. Rest in Peace Old HH."

You can hear this treasured voice one final time by listening to Show 197 in our Archives.

Earlier this year, Hunter had given Rock-it Radio permission to share some of his actual early broadcasts with our listeners. If you would like to hear how Hunter Hancock sounded on the air in the early 1950's, please check out the Rock-it Radio Store. And we will have a special offer mentioned further down where all monies for sales will go to a flower arrangement for his funeral on the 29th of this month. More on that further down in the newsletter. Here is the playlist of the Hunter Hancock show hosted by Lane Quigley...

1. Western Movies -- The Olympics
2. Sneaking around -- B.B. King
3. Night Train -- Jimmy Forrest
4. Turn on your lovelight -- Bobby Blue Bland
5. I'm going to hug yah, kiss yah and squeeze yah -- Bullmoose Jackson

Mike Taylor with a double shot of Rockabilly in show #1035

It's a rockabilly double up with Mike Taylor from St. Louis, Missouri. With twin tunes from famous and not as famous Rockabilly performers of the 50's and early 60's. Here is the playlist.

1. High School Confidential -- Jerry Lee Lewis 1958
2. Bonnie B. -- Jerry Lee Lewis 1961
3. That's all right -- Bob Luman (unissued)
4. Stranger than fiction -- Bob Luman (unissued)
5. Rollin' to the jukebox rock -- Benny Joy (unissued)
6. Miss Bobby Sox -- Benny Joy (unissued)
7. Linda Lu -- Ray Sharpe 1960
8. Oh, my baby's gone -- Ray Sharpe 1960
9. Wear out the soles of my shoes -- Deke Dickerson 2002
10. Take the long way home -- Deke Dickerson 2002
11. Don't wait up -- Laura Lee Perkins 1958

12. Gonna Rock my baby tonight -- Laura Lee Perkins  (unissued)
13. The train kept a rollin' -- Johnny Burnette   1956
14. All by myself -- Johnny Burnette   1956
15. Cravin' -- Bobby Roberts   1958
16. Big Sandy -- Bobby Roberts   <?>
17. Good Rockin' baby -- Sid King & his 5 Strings  1956
18. Gonna Shake this shack tonight -- Sid King & 5 Strings 1956
19. Blueberry Hill -- Elvis Presley   1957
20. One sided love affair -- Elvis Presley   1956

Thanks Mike for another great mix of Rockabilly music from the first era of Rock and Roll.  If you would like to send comments or requests to Mike Taylor you can at:
metbet@prodigy.net

===========================================

Jukebox '54!  More of 1954 Rockers with the Big Show and
Clarke Davis in Rock-it Radio show #1036

Another great installment of Jukebox '54 where Clarke Davis continues to dig deeply into Rock and Roll and Rhythm and Blues songs from that momentous year. Here is the playlist.

l.  Chuck Higgens -- One Chord Instrumental
2.  Harptones -- It Was Just for Laughs
3.  Otis Williams/Charms -- Ling Ting Tong
4.  Richard Berry -- I'm Still in Love with You
5.  Five Echos -- Lonely Mood
6.  Dixie-aires -- Traveling All Alone
7.  Blue Dots -- Don't Hold It
8.  Crickets -- When I Met You
9.  Lamplighters -- Smoochie
10.  Lloyd Price -- Walkin' the Track
11.  Scarlets -- Dear One
12.  Marvin & Johnny -- Tick Tock
13.  Bucaneers -- Come Back My Love
14.  Platters -- Roses of Picardy
15.  Swallows -- Our Love is Dying
16.  Ray Charles -- Come Back
17.  Spaniels -- Let's Make Up
18.  Nolan Strong/Diablos -- An Old Fashioned Girl
19.  Five Stars -- Where Did Caldonia Go
20.  Crows -- Untrue
21.  Pelicans -- Chimes

I for one had no idea what a great musical year 1954 and we have received several e mails on how much this series has been appreciated!   So, if you haven't done so yet check out all the great tunes from Clarke's Jukebox series. If you would like to send Clarke an e mail of a request or comment you can at:
clarkedavis@yahoo.com
Dat's all for now........more GREAT JUKEBOX  MUSIC to
come on the Big Show with Clarke Davis......next week!

3. PINK AND BLACK  Sonny Fisher    195?
4. ITCHY TWITCHY FEELING  Bobby Hendricks    1958
5. YOUNG AND WILD  Al Hendrix    1960
6. BILLY BOY  Jimmy Isle    1959
7. I DON'T NEED YOUR LOVE AND KISS  Bobby Cash  1964
8. DESTINATION 2165  The Cues    1956
9. MAYBE BABY  Buddy Holly  1958
10. DOWN ON THE FARM  Big Al Downing  1958
11. CADDY BO  The Magnificents   1956
12. CHICKEN LITTLE  Ravon Darnell    1956
13. ROCKIN' AND ROLLIN'  Curley Langley  1956
14. SWEET LOVE ON MY MIND  Jimmy and Johnny   1956
15. OK DOLL IT'S A DEAL  Joanie King    1958
16. ROCKIN' MAN  Richard Berry   1955
17. QUICK SAND LOVE  Macy Skipper   1958
18. WATCHDOG  Al Terry    1959

The Heebie Jeebies show are listed just below the rest of the other shows in our archives page at:

http://www.palmsradio.com/rockittext.htm
and we always keep 3 shows in the archives page.

=============================================
Welcome New Members to our Listeners club!!!!

A big welcome to the below new Rock-it Radio listeners that joined our Listeners Club from August 6th, 2004 to August 12th, 2004.

A Big Welcome to:

Paso Robles Ken -- California, USA
Murray Sunday -- Indiana, USA
Chris Hauk -- Illinois, USA
Gary Woodcock -- United Kingdom
Mark Carr -- California, USA
Ralph Battishill -- Michigan, USA
Tom Page -- Missouri, USA
Lenny Piasecki -- Illinois, USA
Tony Perritt -- Australia
Andre Helfers -- Germany
Grant Williams -- Oregon, USA
Pat Masrino -- Florida, USA
Joe Marino -- Florida, USA
Bruce Martin -- New York, USA
Ken Steenbuck -- New York, USA
William Sale -- Nevada, USA
Ira McComic -- Texas, USA
Kenneth Falik -- Japan
Ernie Paulsen -- Nebraska, USA
Ina Singh -- India
Calico Cat -- Wisconsin, USA
Bob Ciclase -- New Jersey, USA
Brian Wilson -- United Kingdom
Rafael Sanchez Flores -- Mexico
Gekkehenkie -- The Netherlands
Shaun Jinks -- United Kingdom

We have added 26 more new members to the Listeners Club since our last newsletter. We now number 3874 members that have joined our Listeners Club.
We hope that you enjoy the rare 50's Rock and Roll, Rockabilly and Doo Wop (which most commercial radio stations have forgotten) that we are able to play for you from Rock-it Radio. Remember, we are here for you!
So if you ever have any requests, dedications, comments and

suggestions we always love to hear from our listeners.
Our e mail address is: Rockitradio@netzero.net

Special Note: Remember if you change Internet providers or E Mail addresses, you need to resubscribe to the Rock-it Radio Listeners club if you wish to continue to receive these playlists bulletin.

==============================================

Rest in Peace -- Hunter Hancock 1916 - 2004

This past week the radio world lost a true Rock and Roll Icon.
Hunter Hancock was the first DJ to have his own radio show featuring Rhythm and Blues (then called Race Records), back in 1948 here in Los Angeles. Hunter in the 40's, 50's and 60's was a popular figure on the Los Angeles Radio Dial.
For the vinyl collector's out there ... some of you may possess the "Cruisin'" Series that featured Top DJ's of the 50's and 60's. Hunter was selected to represent 'Crusin' 1959' LP playing him his style and music on KGFJ in Los Angeles.

After 33 years of retirement as previously mentioned Lane Quigley and the Memory Lane show was able to have Hunter Hancock bring back the "Huntin' with Hunter" Show here on Rock-it Radio. At 84 years old then Hunter showed and proved he still had it and we are honored to put this show one last time in our archives right now in Rock-it Radio show #1034. And will be online up to the 23rd of this month.

Hunter's services will be Saturday, August 28 at 2:00 pm at Claremont United Methodist Church, 211 W. Foothill Boulevard, Claremont, California 91711.

Rock-it Radio will be sending out a floral arrangement from the DJ's and Listeners of Rock-it Radio to the service.
In our Rock-it Store we feature two shows of Hunter Hancock's. One being the show that is being rebroadcast in our archives page under show #1034 that he did for Rock-it Radio back in 2000. And the other is Early Rhythm and Blues shows of Rock-it Radio. All sale monies of these two shows
up to August 23rd will go to the floral arrangement of Hunter's Funeral. As we will be ordering the floral arrangement on the 24th. The Rock-it Store is at: http://www.palmsradio.com/store.html

So, if you would like to have a show of one of Rock and Roll Radio's Historic figures and a true gentleman we are honored to offer this show to our Listening audience.
RIP -- Hunter Hancock

If you would like to check out more on Hunter Hancock -- There is a picture of him with Lane Quigley from 2000 in our DJ page and the official Hunter Hancock website at:
http://www.electricearl.com/dws/hunter.html

==============================================

Associated Press Obituary on Hunter Hancock

Hunter Hancock, 88, a D.J. Who Embraced Rock Early, Dies
By THE ASSOCIATED PRESS

Published: August 13, 2004

LOS ANGELES, Aug. 12 (AP) - Hunter Hancock, an early rhythm-and-blues and rock 'n' roll D.J. in the western United States, died on Aug. 4 in Claremont, Calif.

He was 88.

He died of natural causes in a retirement home, said his daughter, Rosemary Davis.

He was known on the air as Ol' H. H. and was heard from 1943 to 1968 on numerous stations. He was the host of popular radio shows, including "Harlem Holiday," "Harlematinee," "Huntin' With Hunter" and the gospel show "Songs of Soul and Spirit."

He also appeared briefly on KCBS-TV in 1955 with the Friday-night show "Rhythm and Bluesville," on which he interviewed musicians like Duke Ellington, Fats Domino, Little Richard and the Platters.

For several years Pulse survey, a precursor to Arbitron, rated Mr. Hancock's shows No. 1 among black listeners in Southern California. In 1950 The Los Angeles Sentinel rated him the most popular D.J. in Los Angeles among blacks. As a result, people who attended concerts at which Mr. Hancock was the M.C. were often surprised to discover that he was white.

Born in Uvalde, Tex., Mr. Hancock tried nearly two dozen careers, including salesman, bank clerk, chauffeur, drummer and singer, before being hired by KMAC-AM in San Antonio to read commercials and news.

He was playing jazz on a Los Angeles radio show that had been created to attract black listeners when a record salesman told him that he could attract even more if he added what were then called race records. He played a couple of R&B records offered by the salesman and they were so popular, he recalled years later, that within a week they were all he played. In 1956 he became one of the first D.J.'s to play rock 'n' roll.

=============================================

If you haven't heard last week's shows yet ....

If you haven't heard last week's shows yet -- you might want to hurry they will be going pretty quick!  We are backlogged with great shows coming up and need to get those online.
Including a show from Al "Cool Daddy" Smith and a tribute to Dick Dale; Sheree Homer is back with some Rockabilly Revue show; Lane Quigley and a new installment of the Memory Lane Show and much more -- coming next week on The Rock-it!

=============================================

The Rock-it Radio Store -- Helps these shows keep coming.

Do you purchase music online? If and when you do could you help support Rock-it Radio at the same time?
All of the DJ's here at Rock-it Radio are putting there time in for the love of

the music and the joy we get from the letters from our listeners. But it still takes money to bring these shows online.
Copyright fees (Ascap, BMI, SESAC, RIAA all want $$ from Rock-it Radio) and band and webspace etc.

So if you can when you are purchasing Music or Books etc.
Could you please use the links to Amazon.com on our website or check out the Oldies music we have in our Rock-it Store.
When you order anything off this site a small percentage
helps keep the Rock-it Flying and broadcasting online.

The Rock-it Radio Store website is:

http://www.palmsradio.com/store.html

=============================================
Rock-it Radio Winner for July -- Dave Yoder!!!!!
Refer a Friend -- And have a chance to win a Vintage Broadcasts

Every month we will be giving away 2 airchecks of your choice to lucky winners that are picked from using the Refer a Friend link.
These airchecks are the actual Broadcast recordings available at our Rock-it Radio Store. Including broadcasts and music played by Alan Freed etc.

How to use a Refer a Friend Link: Go to our archives page at:
http://www.palmsradio.com/rockittext.htm
and scroll down to the Blue Box and enter the name of a friend that you think would enjoy Rock-it Radio Online...
and your e mail address in the other box. Press Enter...
The more times you enter the more chances you have to win these actual broadcasts that feature the music, news and DJ's of the 50's and 60's.

Congratulations to July's Winner:  Dave Yoder
Dave has chosen the two  Hunter Hancock broadcasts from our Rock-it Store and will be shipped to him within this week.

=============================================
A Big Thank You

Thank you everyone to those that help keep Rock-it Radio online and help us pay

the fees that are necessary to keep this music alive that most commercial oldies

stations have forgotten.  A big thank you to everyone that has bought the historical Rock and Roll Radio Shows that we have for sale in the Rock-it Store

at:  http://www.palmsradio.com/store.html
Without your support we would of had to cease operation completely.  For those that are not familiar with the Rock-it Store we feature actual Radio Broadcasts

from the likes of Alan Freed, the Real Don Steele and many others from the 50's

and 60's. Thank you everyone!!!
s/ Bennie Dingo
Rock-it Radio Online

==============================================

Tons of Doo Wop Links and Group Harmony Sites at
Our Doo Wop Links Page.
http://www.palmsradio.com/doowop.html

==============================================
And of course don't forget our Rockabilly Links page as well!

Our Rockabilly Links page can be found at:
http://www.palmsradio.com/rockabillylinks.html

=============================================
Archives page reminder

Remember, if the show that you want to hear is getting close to the bottom of the list of radio shows, you should tune in as soon as you can.
These shows to have a high audio quality require a lot of
internet bandwidth and memory. And currently we can only afford the 14 latest shows online here at Rock-it Radio.
So, when a new show is put online it knocks the oldest one off the internet server.
Usually a show will at least last 10 days, once it is placed in the archives.

=============================================
Come Join the Rock-it Listener's Club

Want to join our Listeners Club?? And be notified when new shows are playing on

the Rock-it.

If you are not a member of our listeners club it is
really easy to join... just go to our main website at:

http://www.rockitradio.net
and click the button that reads... "click here to be on our mailing
list" at the top of the page. When you click there leave your e mail
address and you are in...
it's free and it gives you the playlists and news on our latest
shows.

==============================================
The Rock-it DJ Page

Who are all these DJ's on the Rock-it ???
Check out our Rock-it Radio DJ page

at: http://www.palmsradio.com/bio.htm

and see all the folks that make these shows possible.

=============================================

Well that is just about it for this newsletter and playlists of our latest shows. We hope that you enjoy them. We will do our best to keep these shows on for at least 7 days and hopefully 14 days.

All the best always,

Bennie Dingo

Hi All :
 I saw Roy Cunningham recently, he is well and very busy ... wondering, like
he used to, if anyone out there is experimenting with digital recording for
radio commercials ... the only 'support' group seems to be a Seattle based
software development group that I contribute to ...
 Amoung other things, they determined that if someone has recorded 37 discreet
individual tracks, at 48 KHz sample rate, and tries to mix-down, the software
crashes - they were all 30 second recorded 'passes' ... well now we know that
one ...
 Gone is all my rack mounted gear, including the Alesis Compressor/Limiter &
the DoD Vocalist II - everything now fits in a suitcase, with the main item
being a PC laptop, and tons of mics, headphones, cables and adapters ...
 I'm using two MIDI keyboards to pre-record and mixdown the production music
'beds' ... anyone else doing the same?

Thanks

Joe

I'm not sure I agree with your count, Rich.  I'm not disputing the subscriber
number,
but isn't it fair to say that anyone listening to any Sirius or XM program ISN'T
listening to coventional radio.  Thus, there's radio listening, and not-radio
listening (XM and Sirius).  Point being that it's of no particular significance as
to
WHAT program is being listened to, just that it's not radio.  And using that
criteria, 3 million subscribers equates to more than 1% of the U-S population -
even
more when considering only those who use radio.  Isn't it fair to say that this,
assumed to be uniformly distributed, also means that Sirius and XM (assuming all
subscribers are listening at once...a big assumption, certainly) would be similar
to
an in-market radio station with a 1 share, a level that many stations in
densely-served markets would consider to be a success?  If this share grows by
just
one order of magnitude, it's going to start hurting traditional broadcasting.

> I believe it'll be many years before satellite radio becomes a
> significant threat to radio. It'll take even longer before ad agencies

> Agencies have to buy on environment rather than buying buy the
> numbers, as they're used to doing.

But Sirius' and XM's business model doesn't require advertisers....it's
subscription,
and the subscription model is more efficient than the advertiser-supported model
(as
XM seems to have found out).  We don't got to show you any stinkin' ad agencies,
and
could care less what numbers they're looking for!

> I have both XM and SIRIUS. I generally listen to Classical, Jazz,
> Oldies and a few other non-commercial channels. That means I'm
> unreachable by advertisers.

Except, you've noted, when you listen to NPR.  And NPR's programming on Sirius does
do underwriting announcements, too, you know.  Not exactly being deluged with
advertising matter, true, but it's still a far cry from being an advertiser-free
zone.  So considering how desireable NPR listeners are, it might just be the bleeding
edge on where satellite "advertising" dollars starts seeping to.

For sale:

(The "Radio Crazy" is baaaaakkk!)

Partial interest in Alaska AM/FM station. This is a joint venture. There is an element of risk and you could lose all or part of your investment. (Legal disclaimer....not likely to be the actual case!)

AM is fulltime, 1 KW, non-directional. FM is class "A".

Only stations in the city except for some translators.

Active or inactive investors with at least $20,000 each are welcome. All investors would be on the board with full voting rights if desired. No individual can own controlling interest. That includes me!

This is a very important tourist city! There is train service there to Anchorage. The city also has an airport.

Tel: (478) 741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

>Are they still on the air?

Yes.

Jim Bohannon still hosts the late night program that was once Larry King's old Mutual show.  It is now distributed by Westwood One (which bought Mutual some years ago) and I believe Jimbo is live 10 PM-1 AM ET now.   The affiliate list is somewhat smaller than it was in the Larry King days, due to more recent popular shows like Premiere's Coast to Coast AM.

Jimbo also does WW1's "America in the Morning", a one-hour news show which generally airs around 4 or 5 AM ET, as a lead-in to local news blocks on major news/talk stations around the country. By far that show's most "interesting" clearance is as the lead-in to Howard Stern on Washington, DC hot talker WJFK/106.7...Jimbo lives in that market.

Bernie Ward (no relation to your humble poster) is no longer heard nationally, as ABC Radio dumped his weekend show...but ABC O&O KGO/810 in San Francisco still carries his show locally, weeknights from 10 PM-1 AM PT.

just
>one order of magnitude, it's going to start hurting traditional broadcasting.

Since you're using the percentage of population figure, it wouldn't be
share. It would be rating, a much smaller figure. The percentage of
the total population listening to anything is far less than the
percentage of persons using radio at a given time.

I'm also not convinced that satellite subscribers are regular radio
listeners. If they are, they're probably not listening to satellite
exclusively and are sharing the time with conventional radio.
Remember, the traffic and weather channels serve only a small segment
of the population and fewer within that population actually listen to
it or know it exists.

I believe most satellite listeners left radio some time ago and are
sampling the new medium. Unfortunately for me much of what I disliked
about terrestrial radio has been taken to the sky: mindless, yelping
jocks on some channels mispronouncing the names of local cities I got
XM and SIRIUS to get away from the Party Martys of the world (there
are many others) only to find they're there. I turn it off just as I
turned off my FM radio before it.

>But Sirius' and XM's business model doesn't require advertisers....it's
subscription,
>and the subscription model is more efficient than the advertiser-supported model
(as
>XM seems to have found out).  We don't got to show you any stinkin' ad agencies,
and
>could care less what numbers they're looking for!

Approximately 40 of the 100 channels are commercial. I assume they
hope for some ad income. How will they convince an agency that people
are listening to commercials? There's no reverse data stream that
monitors what I listen to.

>Except, you've noted, when you listen to NPR.  And NPR's programming on Sirius
does
>do underwriting announcements, too, you know.  Not exactly being deluged with

bleeding
>edge on where satellite "advertising" dollars starts seeping to.

Neither service claimed to be advertiser free. Both said that non-music channels would carry spots. Until recently, even some music channels did. I've always expected News, Talk and entertainment channels would be commercial.

Part of what terrestrial radio sees as competition involves listeners moving to some other service and advertisers doing the same. I haven't heard any broadcaster complain that satellite radio is siphoning ad dollars away.

Rich

Amateur Radio Newsline™ Report 1409  August 13,  2004

--------------------------------------------------------------------------------

Note: Ladies and gentlemen  This weeks newscast is dedicated to the memory of the late Roy Neal, K6DUE who passed away a year ago on August 15, 2003, following heart surgery.  Roy was our friend, teacher and served as the first elected vice-president of Amateur Radio Newsline after it became a 501(c)(3) nor-for-profit corportation.  We miss him very much.  "So Roy old buddy:  This one is for you."

de WA6ITF

----------------------------------------------------------------------
----------

Amateur Radio Newsline report number 1409 with a release date of Friday, August 13th, 2004 to follow in 5-4-3-2-1.

The following is a QST. Australian hams ask for a new ham band at 500 kilohertz, lots of news world wide on the B-P-L front, and the FCC talks about license processing. Find out the details on Amateur Radio Newsline report number 1409 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: AUSTRALIA TO SEEK NEW 500 KHZ HAM BAND

The old 500 kHz the international maritime distress frequency could become part of a new ham band down-under. This if the Wireless Institute of Australia has its way. W-I-A News anchor Graham Kemp, VK4BB, joins us from Brisbane with the details:

--

The WIA will shortly be writing to the ACA to request the establishment of an experimental amateur allocation at 500 kHz. Thats the 600 meter band.

WIA Director Glenn Dunstan VK4DU said "500 kHz was the international maritime Morse code distress frequency for most of the 20th century."

"It was the frequency used by the RMS Titanic to send her plaintive cries for help that April night in 1912. It was the frequency used by thousands of merchant ships to signal their plight in times of peace and war."

"More often than not, 500 kHz was witness to a ship's Radio Officer's last moments. Many Radio Officers literally died at the key as their ship fell victim to enemy action or was overwhelmed by the forces of nature".

Glenn, himself an ex ship's Radio Officer, said. 500 kHz was replaced in 1999 by the Global Maritime Distress and Safety System (GMDSS), which uses a combination of automated terrestrial and satellite communications.

"Since the introduction of the GMDSS in 1999, 500 kHz use has declined rapidly. The last official users of the frequency, China, plan to discontinue operation in 2005. The frequency is no longer used in Australia, New Zealand, the Pacific or the US."

500 kHz has been instrumental in saving tens of thousands of lives in the last 100-odd years. It is thus fitting that the frequency be preserved as a 'spectrum national park' to commemorate those who paid the supreme sacrifice in its use.

"The best way to do this is to establish a small slice of spectrum around 500 kHz - probably 495 to 510 kHz - as an amateur radio band. The band would also provide a unique opportunity for experimentation with antennas, propagation, advanced narrow band modulation techniques and receiver digital signal processing." Glenn said.

--

It should be noted that 500 kHz is still allocated to the maritime service so any permanent amateur access in Australia or elsewhere is some way off.  It is worthy of note that the I-A-R-U Region 1 and various United States Amateur long wave groups are actively pursuing an experimental  allocation at 500 kHz as well.  (WIA News)

**

## HAM RADIO IN SPACE:  ECHO ON THE AIR

AMSAT has announced that the F-M voice repeater on the Oscar-51 Echo satellite is on for a trial period.  The transponder was turned on the  30th July for about three weeks during which command stations will be watching the power budget and adjusting the transmitter power for good management of the battery.

For those wanting to give Echo a try, its uplink is on 145.920 MHz F-M, with 67 Hz CTCSS tone. The downlink is on 435.300 MHz.

A reminder that this is a trial of the F-M voice repeater only. Please do not send any data through it. AMSAT says that the digital portion of Echo is not yet ready for use. (ANS)

**

THE BPL FIGHT: ZS AMATEURS SHOULD REPORT BPL TESTING TO THE SARL

Turning to news on the B-P-L front, South Africa AMSAT President Hans van de Groenendaal, ZS6AKV, has now spoken out. He is urging amateurs and short-wave listeners in that nation to report any unusual but consistent interference to the South African Radio League. This as the rollout of Broadband over Powerline continues in that country.

ZS6AKV says that South African hams must continue to be vigilant about any B-P-L testing taking place in their neighborhoods. Hans says that following Pretoria's example several other metropolitan areas have shown an interest and may soon be starting trials. (SARL)

**

THE BPL FIGHT: FOLLOW-UP ON SAN DIEGO GAS AND ELECTRIC

Back here in the USA, San Diego Gas & Electric has confirmed that it is considering entering the Broadband Over Powerline business, but for now that's about all the utility will say.

As reported last week, San Diego Gas & Electric planners are reported to be seriously considering endorsing and sponsoring Broadband Over Powerline data transmissions on the company's power distribution system. The story went on to state that San Diego Gas & Electric is also considering entertaining proposals to partner with vendors for one or more field demonstrations of BPL. This, this despite being advised that B-P-L will cause considerable interference.

Bob Gonsett, W6VR, whose CGC Communicator newsletter was first to break the story put in a call to the utility to try and get a bit more information. San Diego Gas & Electric response was brief and far from insightful. All that the utility would tell Bob is -- and we quote: "Like many utilities, San Diego Gas & Electric is assessing B-P-L technologies."

W6VR says that while we are all temporarily left in the dark as to San Diego Gas & Electric plans, those plans will eventually surface. As soon as they do, we will let you know. (CGC)

**

THE BPL FIGHT: NORTH CAROLINA UTILITY ENDING BPL FIELD TRIAL

Meantime, North Carolina's Progress Energy Corporation says it's completed Phase II of its B-P-L field trial in the Raleigh, and will be closing down the experiment. In an August 4th internal memorandum reported by the ARRL Letter, the company said its program to test the viability of providing broadband service to communities it serves will wrap up by the end of August. The company reportedly will shut down the system once it's able to move its BPL customers to other broadband providers. Progress Energy's decision comes on the heels of announced shutdowns of B-P-L field trials in Penn Yan, New York, and Cedar Rapids, Iowa. (ARRL)

**

RADIO LAW: HAM RADIO EXEMPT FROM CONTROVERSIAL SAN DIEGO WIRELESS SITING ORDINANCE

Wireless communication antennas would be allowed in San Diego, California's residential areas only as a last resort under a new policy recently approved by the City Council. By a vote of 7 to 1, the council has approved a new policy governing the design and placement of wireless antennas, making it more difficult for cellular carriers and others to erect towers in or near residential areas.

Under the new regulations, the process will differ according to location. Some approvals would be made at the staff level, while others would require an okay from a planning group, a hearing officer or the full Planning Commission.

In the past 20 years San Diego has processed over 1,400 applications for cellular telephone towers but the the city has not tracked how many were actually built but there is some good news for hams on this one. ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, reports that amateur radio is specifically exempted from the terms of this new ordinance

More about the ordinance itself is on-line at http://www.signonsandiego.com/uniontrib/20040728/news_1m28wireless.html (CGC with further information from NZ6T)

**

RESCUE RADIO: COMMISSION SEEKS COMMENTS ON RULE CHANGES FOR EAS

The FCC has issued a Notice of Proposed Rulemaking concerning possible revisions to the Emergency Alert System or E-A-S system. The agency is seeking comment on how E-A-S can become a more effective tool for warning the American public of an emergency. It is also a chance for radio amateurs to suggest new ways that the E-A-S might be interfaced with our hobby to better serve the public in time of need. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250534A1.doc (CGC)

**

WITH THE FCC: MANAGING THE DATA PROCESSING OF LICENSES

The FCC has a lot to say about the Universal Licensing System and some of the problems it faces in administering it. Especially those dealing with paper filings from the ham radio community.

Donna Scott, a Program Analyst with the Wireless Telecommunications Bureau in Gettysburg, Pennsylvania. And in a recent interview with Rain, he outlined just one of the most common situations that her office runs into. This one dealing with applicants who faili to provide their FCC Identification Number better known as an F-R-N:

--

Scott: "I believe that one of the biggest problems that we encounter are paper filings coming here to Gettysburg with no F-R-N on the application. The F-R-N is mandatory. This is the registration number that you obtain through the CORES database and without that number wee really can't accept that application. And we do have a high volume of paper applications that still come in without that number."

--

Probably the second highest volume of amateur applications that need to be returned are those from hams who do not read what's right in front of them. These are hams who insist on sending form 605 V-E-C to the agency. This even though the form 605 V-E-C is only for use by those who give the tests and not for the ham in the street filing paperwork with the agency:

--

Scott: "It clearly states that it is a 605 VEC form. It says do not send to the FCC on the top and on the bottom. Yet amateurs continue to send them here to Gettysburg and we cannot accept them."

--

According to Scott, the only version of Form 605 the FCC will accept from the ham community is the one that contains the approval statement from the governments Office of Management and Budget and that carries a current issue date.

This is only a fraction of the information that Donna Scott described about managing the nuts and bolts of the FCC's licensing system. There's lots more with her on this weeks RAIN Report. Its on line right now at www.rainreport.com or on the phone at 847-827-7246. (RAIN)

**

## ENFORCEMENT:  ELECTRIC UTILITY WARNED AGAIN ABOUT INTERFERENCE TO HAM RADIO

A Tennessee power company has been told that its response to an earlier RFI complaint is inadequate.  The FCC's Daryl Duckworth, NN0W, explains:

--

Audio report only.  Download the MP3 newscast audio file at www.arnewsline.org

--

The FCC told the utility that the it knows of no powerline noise problem associated in any way with guy wires.  (FCC, RAIN)

**

## ENFORCEMENT:  $3000 FINE FOR UNLICENSED OPERATION

The FCC has issued Donald Donovan Jackson of St. Petersburg, Florida a monetary forfeiture in the amount of  $3,000.  This, for operating an FM broadcast station on the frequency 102.1 MHz without Commission authorization.

On November 23, 2002, agents from the Tampa Office observed a broadcast station operating on the frequency 102.1 MHz. A search of Commission records revealed no FM radio station licensed to operate on 102.1 MHz in that area.  The agents then used direction-finding techniques and determined that the broadcasts originated from a commercial office building located in St. Petersburg.  Field strength measurements taken near the sight of the broadcast indicated that the signal strength exceeded the permissible limits for a non-licensed station.

The agents interviewed the owner of the building who provided them with a copy of the lease for suite.  He also informed them that a person named Donald Donovan Jackson operated the radio station from the premisis.

On January 15, 2003, agents from the Tampa Office interviewed Jackson and conducted an inspection of the station after again observing a radio station operating on 102.1 MHz.  During the interview, Jackson admitted to leasing the property and operating the radio station from that location.  He was given the usual 30 days to pay the fine or to file an appeal.  (FCC)

**

RADIO LAW:  DOJ WANTS MANDATED DIGITAL WIRETAP ABILITY

The Department of Justice says that technology companies should be mandated to ensure that law enforcement agencies can install taps on Internet traffic and new generations of digital communications devices. This as the D-O-J and other agencies press for a digital expansion to the Communications Assistance for Law Enforcement Act.

The Communications Assistance for Law Enforcement Act is a 1994 law that requires the telecommunications industry to build into its products tools that U.S. investigators can use to eavesdrop on conversations with a court order.  The investigatory agencys are worried that federal agents would not be able to install court ordered wiretaps against criminals who communicate using the latest digitally encrypted  technologies. Lawyers for the Justice Department, FBI and Drug Enforcement Administration say that this need requires immediate attention and resolution by the Federal Communications Commission.  (Published news reports)

**

RESCUE RADIO:  HAM RADIO AT THE DEMOCRATIC CONVENTION

Eastern Massachusetts ARES was activated to support Public Service Agencies during the Democratic National Convention which concluded Friday, July 30th.  The ARRL reports the Salvation Army, that the American Red Cross, and the Massachusetts Emergency Management Agency all helped out.  ARES was ready to provide any needed support in case of catastrophic loss of the communication infrastructure that had been installed for the event.  (ARRL)

**

RADIO IN SERVICE: FITTEST SEEKING ASSISTANCE

Those involved with Rescue Radio may find some appeal in this. The United Nations World Food Program's FITTEST operation is currently seeking Telecommunications Specialists for 3 to 6 month contracts.

FITTEST stands for the Fast Internet and Telecoms Emergency Support Team and it offers constant travel, constant pressure, constant challenges in a job that still allows you to combine a family life and a professional life in a two or three months on one month off duty regime.

Typically, FITTEST hires people with non-conventional career paths to provide emergency deployment of VHF and HF networks, Satellite and Telephone systems. They are looking only at people with direct hands-on experience willing to work under harsh circumstances.

To get an idea of the work they do in Iraq and Afghanistan have a look at their web sites. They are in cyberspace at http://www.hiciraq.org/mediacentre/gallery/FITTEST/ http://www.qsl.net/ya5t. Applications to mark.tell@wfp.org and martin.kristensson@wfp.org (WIA News)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

ON THE WEB: BIG CHANGES AT THE QRZ.COM WEBSITE

Some major changes are taking place at the very popular QRZ.com ham radio website. We have more in this report:

--

Fred Lloyd, AA7BQ, who runs the QRZ.com website has announced major changes in access to posting access site.  This, for registered users whose login user name is not the same as their  ham radio callsign.

Basically, Lloyd says that only contributors who have legitimate ham radio calls will be permitted to post material to most areas of the website.  To accomplish this Llloyd says that he has created two levels of membership.  One called Ham is for those who want to use their call sign as registration login.  The other will be the Guest member for those who may not have a call or who simply prefer not to use it.

Those who have a call and use it for login purposes will have full read and write access to all public Q-R-Z forums, plus the ability to make changes and/or additions to listings in the callsign database. Guest level members will be limited to posting on the sites Help Forum, the For Sale Forums, and the Questions and Answers Forum. These people will have no access to callsign database editing functions.

QRZ.com has also instituted several rules to help keep order and decorum at the site to make it enjoyable for the majority of those signing on.  Among these are the right to terminate the current and future membership status of any user who engages in the harassment of any other user, staff member, or volunteer of this system or the use of any information derived from the website that contributes in any way to  unsolicited e-mail of any kind.  Also banned is the posting of obscene or offensive material on the site and QRZ managers say that they reserve the sole right to determine what is either offensive or obscene.

Lloyd says that the site will shortly begin converting current members to the new system.  If you are currently signed up using your call sign as your logon I-D you need do nothing.  For those who are not, QRZ we will be assigning new login names to those current members who are apparently licensed amateurs.  The new logon name will be the same as the callsign that is listed in the QRZ call sign database as the 'Primary Callsign' for that account.  Each user who is subjected to a name change will be notified via e-mail at the address we have on file for that user.  Names that cannot be associated with a callsign will be assigned to the Guest level of membership.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Lots more about the changes are on the QRZ.com website under the title QRZ System Announcement.  Lloyd and the managers at QRZ  say that they hope that these hanges will improve the website for everybody.  (QRZ.com)

**

## HELPING HAND:  THE AUDIO NETWORK

The U-K Audio Network is a website for the blind using audio web pages, controlled by standard keyboard navigation.  It is the first site in the world that needs no adaptive technology to be accessible by blind and partially sighted users.

There are many resources on the Audio Network.  For example, it is the only place on the Internet where you can listen to BBC Radio schedules for the forthcoming week in audio.  And speaking of radio, there is a whole section of radio stations where you can change channels at the touch of a button, without having to worry about annoying pop ups or filling out a registrations.

Best of all this website is free.  Its located in cyberspace at http://www.yrguk.com  (RSGB)

**

## THE SOCIAL SCENE:  DENVER IN AUGUST

Turning to the ham radio social scene, the Denver Radio Club Hamfest is scheduled for Sunday, August 22nd at the Jefferson County Fairgrounds in Golden.  Doors open at 8:30 AM with door prizes awarded throughout the fest.  For more information contact Bryan Steinberg by  e-mail to kc0cua@arrl.net or visit the clubs website at www.qsl.net/q0tx  (KC�CUA)

**

## THE SOCIAL SCENE:  CFMC IN ILLINOIS IN SEPTEMBER

And the Chicago F-M Club will hold its annual Hamfest and Flea Market on the weekend of September 18th and 19th. The venue is the Lake County Fairgrounds in the city of Grasyslake, Illinois. More information is on-line at wwwchicagofmclub.org. (E-mail)

**

## HAM RADIO IN SPACE: ARISS AT HAM FAIR JAPAN

Amateur Radio on the International Space Station will be represented at the upcoming Ham Fair 2004 on Saturday and Sunday, August 21st and 22nd in Tokyo, Japan. The ARISS U.S. team provided photographs of the radio equipment in the Service Module to J-J-one-L-Y-U. He will display some of them along with a modified Kenwood D 700 E transceiver which looks like the flight radio. Other photos will be used in a slide show as part of an exhibit in the Kenwood Booth. Ham Fair is sponsored by the Japan Amateur Radio League with about 28,000 people is expected at the event. (ARISS)

**

## SPACE: NASA APPROVES NEW DESIGN FOR SHUTTLE EXTERNAL TANK FITTING

NASA is moving ahead with plans to redesign a part of the Space Shuttle external fuel tank that investigators believe played a critical role in the Space Shuttle Columbia accident.

The Space Shuttle program will soon begin installing an improved bipod fitting that connects the external fuel tank to the Shuttle during launch. Investigators believe that during Columbia's launch in January 2003, insulating foam from the bipod area fell off the external tank and damaged the left wing of the Space Shuttle. (NASA)

**

## WORLDBEAT - BELGIUM: GALILEO GPS SYSTEM APPROVED BY EU

Officials in Brussels, Belgium say the satellite navigation system the European Union is planning will not clash with one already in operation by the United States. This, as an agreement signed in that European nation will make sure that the proposed Galileo system will be compatible with the U-S owned Global Positioning System.

Galileo is slated to begin operation 2008. Together the two systems are expected to become a single world standard for positioning and radio navigation. (ANS)

**

DX

In D-X, keep an ear open for GB6LOG. This is a special events station on the air through August 18th to celebrate the 60th anniversary of the Liberation of Guam during World War 2. The station will operate on all modes. QSL via the RSARS QSL Bureau to receive the special QSL from this station. For further information contact G0SWY by e-mail to G0SWY@aol.com (GB2RS)

And hams on Gibraltar have been granted permission to use the special prefix ZB300 during the month of August. This to celebrate the colony's three hundred years of British sovereignty. If you work ZB300, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: SIGHTLESS UK NEWSREADER TAKES TO THE AIR

And finally this week the story of a U-K ham who has overcome physical disability to become a news anchor for the Radio Society of Great Britains GB2RS News. Jeramy Boot, G4NJH, in Nottingham has the rest of the story:

--

Now news about a new GB2RS newsreader. Annick Morris, M0HDE, of Wigan, Lancashire, became a GB2RS newsreader two when she read the news through the GB3MR repeater. What makes this special is that 18-year old Annick has been blind from birth.

She has a specially-adapted laptop computer which accepts Word files, and which has a single-line display consisting of raiseable dots which form characters in Braille. Annick can read Braille fast enough to read out loud from this, although she can only 'see' one character at a time.

In the future Annick will be newsreading on 6 metres, 2 meters and 70 centimetres and it is hoped that she may also transmit on two bands at once.

Jeramy Boot, G4NJH.

--

This is not the volunteer first job that M0HDE has been successful in. At age 14 Annick attended the "Child of Achievement Awards" in central London after impressing organizers with her determination to overcome obstacles presented by her disability. This award recognizes the efforts of young people under the age of 16 who make special efforts to overcome personal disability or illness while also managing to help others. We at Amateur Radio Newsline welcome Annick Morris, M0HDE, to the worlds ever growing ham radio news reporting teams.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

And this note. Because our staff will be in Huntsville to present the Young Ham of ther Year Award there will be no update on the 661-296-2407 line on Friday, August 20th. Phone users are asked to utilize another of the automated phone lines operating in other regions. Our 661-2407 line will update to the latest newscast on Monday, August 23rd.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, and I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2004. All

Just a short one : I've been looking at the playlist for the classic
rock
station here on the Oregon Coast ... I've spent literally hours in the
air-room
watching the list, since I'm a candidate to possibly take over the
show in the
future, also up for 'traffic assistant' on the 'ofice' side of the
station ...

I've noticed the oddness of the list - for example the entire Eagles are fair game for the station, but I've only heard a couple of the lesser-known, and yes, tamer songs played too ...

There are lists on the 'Net that list the 'acceptable' bands, which DOES include the Rolling Stones, and I never hear any of those either :))

I think it's like 'soft rock', or in this case, 'soft classic/oldies' that is bold from a programmer view, but tame for those of us who remember the entire albums and the really radical cuts almost never aired, even then ...

Of course, I would say I'd change the automated play-list if I were the on-air host, but that may not happen here ... more likely I'll be on the tech side, or production/announcing if at all. I'm currently looking for another job locally, and having met everyone at the local stations, including 'Mr. Big', I think looking elsewhere for work, and doing independent commercials/production and recording is my future anyway ...

If you are someone who might have a hand in a playlist at a station(s) in the future, consider looking on the 'Net, compile a list of 'acceptable' classic rock artists, then look for the most obscure and radical album cuts you can find .. I remember the Doors are listed too !  Give me a couple days and I'll cause a commotion with 'acceptable' artists, without crazy announcements and production effects :))

It's all there - just do the research ... If a station isn't playing what YOU want to hear, contact them .. that simple

good luck

Amateur Radio Newsline™ Report 1409  August 13,  2004

--------------------------------------------------------------------------------

Note: Ladies and gentlemen  This weeks newscast is dedicated to the memory of the late Roy Neal, K6DUE who passed away a year ago on August 15, 2003, following heart surgery.  Roy was our friend, teacher and served as the first elected vice-president of Amateur

Radio Newsline after it became a 501(c)(3) nor-for-profit corportation.  We miss him very much.  "So Roy old buddy:  This one is for you."

de WA6ITF

----------------------------------------------------------------------------------

Amateur Radio Newsline report number 1409 with a release date of Friday, August 13th, 2004 to follow in 5-4-3-2-1.

The following is a QST.  Australian hams ask for a new ham band at 500 kilohertz, lots of news world wide on the B-P-L front, and the FCC talks about license processing.  Find out the details on Amateur Radio Newsline report number 1409 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING:  AUSTRALIA TO SEEK NEW 500 KHZ HAM BAND

The old 500 kHz the international maritime distress frequency could become part of a new ham band down-under.  This if the Wireless Institute of Australia has its way.  W-I-A News anchor Graham Kemp, VK4BB, joins us from Brisbane with the details:

--

The WIA will shortly be writing to the ACA to request the establishment of an experimental amateur allocation at 500 kHz. Thats the 600 meter band.

WIA Director Glenn Dunstan VK4DU said "500 kHz was the international maritime Morse code distress frequency for most of the 20th century."

"It was the frequency used by the RMS Titanic to send her plaintive cries for help that April night in 1912. It was the frequency used by thousands of merchant ships to signal their plight in times of peace and war."

"More often than not, 500 kHz was witness to a ship's Radio Officer's last moments. Many Radio Officers literally died at the key as their ship fell victim to enemy action or was overwhelmed by the forces of nature".

Glenn, himself an ex ship's Radio Officer, said. 500 kHz was replaced in 1999 by the Global Maritime Distress and Safety System (GMDSS), which uses a combination of automated terrestrial and satellite communications.

"Since the introduction of the GMDSS in 1999, 500 kHz use has declined rapidly. The last official users of the frequency, China, plan to discontinue operation in 2005. The frequency is no longer used in Australia, New Zealand, the Pacific or the US."

500 kHz has been instrumental in saving tens of thousands of lives in the last 100-odd years. It is thus fitting that the frequency be preserved as a 'spectrum national park' to commemorate those who paid the supreme sacrifice in its use.

"The best way to do this is to establish a small slice of spectrum around 500 kHz - probably 495 to 510 kHz - as an amateur radio band. The band would also provide a unique opportunity for experimentation with antennas, propagation, advanced narrow band modulation techniques and receiver digital signal processing." Glenn said.

--

It should be noted that 500 kHz is still allocated to the maritime service so any permanent amateur access in Australia or elsewhere is some way off.  It is worthy of note that the I-A-R-U Region 1 and various United States Amateur long wave groups are actively pursuing an experimental  allocation at 500 kHz as well.  (WIA News)

**

HAM RADIO IN SPACE:  ECHO ON THE AIR

AMSAT has announced that the F-M voice repeater on the Oscar-51 Echo satellite is on for a trial period.  The transponder was turned on the  30th July for about three weeks during which command stations will be watching the power budget and adjusting the transmitter power for good management of the battery.

For those wanting to give Echo a try, its uplink is on 145.920 MHz F-M, with 67 Hz CTCSS tone.  The downlink is on 435.300 MHz.

A reminder that this is a trial of the F-M voice repeater only. Please do not send any data through it.  AMSAT says that the digital portion of Echo is not yet ready for use.  (ANS)

**

THE BPL FIGHT:  ZS AMATEURS SHOULD REPORT BPL TESTING TO THE SARL

Turning to news on the B-P-L front, South Africa AMSAT President Hans van de Groenendaal, ZS6AKV, has now spoken out.  He is urging amateurs and short-wave listeners in that nation to report any unusual but consistent interference to the South African Radio League.  This as the rollout of Broadband over Powerline continues in that country.

ZS6AKV says that South African hams must continue to be vigilant about any B-P-L testing taking place in their neighborhoods.  Hans says that following Pretoria's example several other metropolitan areas have shown an interest and  may soon be starting trials.  (SARL)

**

THE BPL FIGHT:  FOLLOW-UP ON SAN DIEGO GAS AND ELECTRIC

Back here in the USA, San Diego Gas & Electric has confirmed that it is considering entering the Broadband Over Powerline business, but for now that's about all the utility will say.

As reported last week, San Diego Gas & Electric planners are reported to be seriously considering endorsing and sponsoring Broadband Over Powerline data transmissions on the company's power distribution system.  The story went on to state that San Diego Gas & Electric is also considering entertaining proposals to partner with vendors for one or more field demonstrations of BPL.  This, this despite being advised that B-P-L will cause considerable interference.

Bob Gonsett, W6VR, whose CGC Communicator newsletter was first to break the story put in a call to the utility to try and get a bit more information.  San Diego Gas & Electric response was brief and far from insightful.  All that the utility would tell Bob is -- and we quote:  "Like many utilities, San Diego Gas & Electric is assessing B-P-L technologies."

W6VR says that while we are all temporarily left in the dark as to San Diego Gas & Electric plans, those plans will eventually surface. As soon as they do, we will let you know.  (CGC)

**

THE BPL FIGHT:  NORTH CAROLINA UTILITY ENDING BPL FIELD TRIAL

Meantime, North Carolina's Progress Energy Corporation says it's completed Phase II of its B-P-L field trial in the Raleigh, and will be closing down the experiment.   In an August 4th internal memorandum reported by the ARRL Letter, the company said its program to test the viability of providing broadband service to communities it serves will wrap up by the end of August. The company reportedly will shut down the system once it's able to move its BPL customers to other broadband providers.  Progress Energy's decision comes on the heels of announced shutdowns of B-P-L field trials in Penn Yan, New York, and Cedar Rapids, Iowa.  (ARRL)

**

RADIO LAW:  HAM RADIO EXEMPT FROM CONTROVERSIAL SAN DIEGO WIRELESS SITING ORDINANCE

Wireless communication antennas would be allowed in San Diego, California's  residential areas only as a last resort under a new policy recently approved by the City Council.  By a vote of 7 to 1, the council has approved a new policy governing the design and placement of wireless antennas, making it more difficult for cellular carriers and others to erect towers in or near residential areas.

Under the new regulations, the process will differ according to location. Some approvals would be made at the staff level, while others would require an okay from a planning group, a hearing officer or the full Planning Commission.

In the past 20 years San Diego has processed over 1,400 applications for cellular telephone towers but the the city has not tracked how many were actually built but there is some good news for hams on this one. ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, reports that amateur radio is specifically exempted from the terms of this new ordinance

More about the ordinance itself is on-line at http://www.signonsandiego.com/uniontrib/20040728/news_1m28wireless.html (CGC with further information from NZ6T)

**

RESCUE RADIO: COMMISSION SEEKS COMMENTS ON RULE CHANGES FOR EAS

The FCC has issued a Notice of Proposed Rulemaking concerning possible revisions to the Emergency Alert System or E-A-S system. The agency is seeking comment on how E-A-S can become a more effective tool for warning the American public of an emergency. It is also a chance for radio amateurs to suggest new ways that the E-A-S might be interfaced with our hobby to better serve the public in time of need. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250534A1.doc (CGC)

**

WITH THE FCC: MANAGING THE DATA PROCESSING OF LICENSES

The FCC has a lot to say about the Universal Licensing System and some of the problems it faces in administering it. Especially those dealing with paper filings from the ham radio community.

Donna Scott, a Program Analyst with the Wireless Telecommunications

Bureau in Gettysburg, Pennsylvania.  And in a recent interview with Rain, he outlined just one of the most common situations that her office runs into.  This one dealing with applicants who faili to provide their FCC Identification Number better known as an F-R-N:

--

Scott: "I believe that one of the biggest problems that we encounter are paper filings coming here to Gettysburg with no F-R-N on the application.  The F-R-N is mandatory.  This is the registration number that you obtain through the CORES database and without that number wee really can't accept that application.  And we do have a high volume of paper applications that still come in without that number."

--

Probably the second highest volume of amateur applications that need to be returned are those from hams who do not read what's right in front of them.  These are hams who insist on sending form 605 V-E-C to the agency.  This even though the form 605 V-E-C is only for use by those who give the tests and not for the ham in the street filing paperwork with the agency:

--

Scott:  "It clearly states that it is a 605 VEC form.  It says do not send to the FCC on the top and on the bottom.  Yet amateurs continue to send them here to Gettysburg and we cannot accept them."

--

According to Scott, the only version of Form 605 the FCC will accept from the ham community is the one that contains the approval statement from the governments Office of Management and Budget and that carries a current issue date.

This is only a fraction of the information that Donna Scott described  about managing the nuts and bolts of the FCC's licensing system.  There's lots more with her on this weeks RAIN Report.  Its on line right now at www.rainreport.com or on the phone at 847-827-7246.  (RAIN)

**

## ENFORCEMENT: ELECTRIC UTILITY WARNED AGAIN ABOUT INTERFERENCE TO HAM RADIO

A Tennessee power company has been told that its response to an earlier RFI complaint is inadequate. The FCC's Daryl Duckworth, NN0W, explains:

--

Audio report only. Download the MP3 newscast audio file at www.arnewsline.org

--

The FCC told the utility that the it knows of no powerline noise problem associated in any way with guy wires. (FCC, RAIN)

**

## ENFORCEMENT: $3000 FINE FOR UNLICENSED OPERATION

The FCC has issued Donald Donovan Jackson of St. Petersburg, Florida a monetary forfeiture in the amount of $3,000. This, for operating an FM broadcast station on the frequency 102.1 MHz without Commission authorization.

On November 23, 2002, agents from the Tampa Office observed a broadcast station operating on the frequency 102.1 MHz. A search of Commission records revealed no FM radio station licensed to operate on 102.1 MHz in that area. The agents then used direction-finding techniques and determined that the broadcasts originated from a commercial office building located in St. Petersburg. Field strength measurements taken near the sight of the broadcast indicated that the signal strength exceeded the permissible limits for a non-licensed station.

The agents interviewed the owner of the building who provided them with a copy of the lease for suite. He also informed them that a person named Donald Donovan Jackson operated the radio station from the premisis.

On January 15, 2003, agents from the Tampa Office interviewed Jackson and conducted an inspection of the station after again observing a radio station operating on 102.1 MHz. During the interview, Jackson admitted to leasing the property and operating the radio station from that location. He was given the usual 30 days to pay the fine or to file an appeal. (FCC)

**

RADIO LAW: DOJ WANTS MANDATED DIGITAL WIRETAP ABILITY

The Department of Justice says that technology companies should be mandated to ensure that law enforcement agencies can install taps on Internet traffic and new generations of digital communications devices. This as the D-O-J and other agencies press for a digital expansion to the Communications Assistance for Law Enforcement Act.

The Communications Assistance for Law Enforcement Act is a 1994 law that requires the telecommunications industry to build into its products tools that U.S. investigators can use to eavesdrop on conversations with a court order. The investigatory agencys are worried that federal agents would not be able to install court ordered wiretaps against criminals who communicate using the latest digitally encrypted technologies. Lawyers for the Justice Department, FBI and Drug Enforcement Administration say that this need requires immediate attention and resolution by the Federal Communications Commission. (Published news reports)

**

RESCUE RADIO: HAM RADIO AT THE DEMOCRATIC CONVENTION

Eastern Massachusetts ARES was activated to support Public Service Agencies during the Democratic National Convention which concluded Friday, July 30th. The ARRL reports the Salvation Army, that the American Red Cross, and the Massachusetts Emergency Management Agency all helped out. ARES was ready to provide any needed support in case of catastrophic loss of the communication infrastructure that had been installed for the event. (ARRL)

**

## RADIO IN SERVICE: FITTEST SEEKING ASSISTANCE

Those involved with Rescue Radio may find some appeal in this. The United Nations World Food Program's FITTEST operation is currently seeking Telecommunications Specialists for 3 to 6 month contracts.

FITTEST stands for the Fast Internet and Telecoms Emergency Support Team and it offers constant travel, constant pressure, constant challenges in a job that still allows you to combine a family life and a professional life in a two or three months on one month off duty regime.

Typically, FITTEST hires people with non-conventional career paths to provide emergency deployment of VHF and HF networks, Satellite and Telephone systems. They are looking only at people with direct hands-on experience willing to work under harsh circumstances.

To get an idea of the work they do in Iraq and Afghanistan have a look at their web sites. They are in cyberspace at http://www.hiciraq.org/mediacentre/gallery/FITTEST/ http://www.qsl.net/ya5t. Applications to mark.tell@wfp.org and martin.kristensson@wfp.org (WIA News)

## ON THE WEB: BIG CHANGES AT THE QRZ.COM WEBSITE

Some major changes are taking place at the very popular QRZ.com ham radio website. We have more in this report:

--

Fred Lloyd, AA7BQ, who runs the QRZ.com website has announced major changes in access to posting access site. This, for registered users whose login user name is not the same as their ham radio callsign.

Basically, Lloyd says that only contributors who have legitimate ham radio calls will be permitted to post material to most areas of the website. To accomplish this Llloyd says that he has created two levels of membership. One called Ham is for those who want to use their call sign as registration login. The other will be the Guest member for those who may not have a call or who simply prefer not to use it.

Those who have a call and use it for login purposes will have full read and write access to all public Q-R-Z forums, plus the ability to make changes and/or additions to listings in the callsign database. Guest level members will be limited to posting on the sites Help Forum, the For Sale Forums, and the Questions and Answers Forum. These people will have no access to callsign database editing functions.

QRZ.com has also instituted several rules to help keep order and decorum at the site to make it enjoyable for the majority of those signing on. Among these are the right to terminate the current and future membership status of any user who engages in the harassment of any other user, staff member, or volunteer of this system or the use of any information derived from the website that contributes in any way to unsolicited e-mail of any kind. Also banned is the posting of obscene or offensive material on the site and QRZ managers say that they reserve the sole right to determine what is either offensive or obscene.

Lloyd says that the site will shortly begin converting current members to the new system. If you are currently signed up using your call sign as your logon I-D you need do nothing. For those who are not, QRZ we will be assigning new login names to those current members who are apparently licensed amateurs. The new logon name will be the same as the callsign that is listed in the QRZ call sign database as the 'Primary Callsign' for that account. Each user who is subjected to a name change will be notified via e-mail at the address we have on file for that user. Names that cannot be associated with a callsign will be assigned to the Guest level of membership.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Lots more about the changes are on the QRZ.com website under the title QRZ System Announcement.  Lloyd and the managers at QRZ  say that they hope that these hanges will improve the website for everybody.  (QRZ.com)

**

HELPING HAND:  THE AUDIO NETWORK

The U-K Audio Network is a website for the blind using audio web pages, controlled by standard keyboard navigation.  It is the first site in the world that needs no adaptive technology to be accessible by blind and partially sighted users.

There are many resources on the Audio Network.  For example, it is the only place on the Internet where you can listen to BBC Radio schedules for the forthcoming week in audio.  And speaking of radio, there is a whole section of radio stations where you can change channels at the touch of a button, without having to worry about annoying pop ups or filling out a registrations.

Best of all this website is free.  Its located in cyberspace at http://www.yrguk.com  (RSGB)

**

THE SOCIAL SCENE:  DENVER IN AUGUST

Turning to the ham radio social scene, the Denver Radio Club Hamfest is scheduled for Sunday, August 22nd at the Jefferson County Fairgrounds in Golden.  Doors open at 8:30 AM with door prizes awarded throughout the fest.  For more information contact Bryan Steinberg by  e-mail to kc0cua@arrl.net or visit the clubs website at www.qsl.net/q0tx  (KC�CUA)

**

## THE SOCIAL SCENE: CFMC IN ILLINOIS IN SEPTEMBER

And the Chicago F-M Club will hold its annual Hamfest and Flea Market on the weekend of September 18th and 19th. The venue is the Lake County Fairgrounds in the city of Grasyslake, Illinois. More information is on-line at wwwchicagofmclub.org. (E-mail)

**

## HAM RADIO IN SPACE: ARISS AT HAM FAIR JAPAN

Amateur Radio on the International Space Station will be represented at the upcoming Ham Fair 2004 on Saturday and Sunday, August 21st and 22nd in Tokyo, Japan. The ARISS U.S. team provided photographs of the radio equipment in the Service Module to J-J-one-L-Y-U. He will display some of them along with a modified Kenwood D 700 E transceiver which looks like the flight radio. Other photos will be used in a slide show as part of an exhibit in the Kenwood Booth. Ham Fair is sponsored by the Japan Amateur Radio League with about 28,000 people is expected at the event. (ARISS)

**

## SPACE: NASA APPROVES NEW DESIGN FOR SHUTTLE EXTERNAL TANK FITTING

NASA is moving ahead with plans to redesign a part of the Space Shuttle external fuel tank that investigators believe played a critical role in the Space Shuttle Columbia accident.

The Space Shuttle program will soon begin installing an improved bipod fitting that connects the external fuel tank to the Shuttle during launch. Investigators believe that during Columbia's launch in
January 2003, insulating foam from the bipod area fell off the external tank and damaged the left wing of the Space Shuttle. (NASA)

**

## WORLDBEAT - BELGIUM: GALILEO GPS SYSTEM APPROVED BY EU

Officials in Brussels, Belgium say the satellite navigation system the European Union is planning will not clash with one already in operation by the United States. This, as an agreement signed in that

European nation will make sure that the proposed Galileo system will be compatible with the U-S owned Global Positioning System.

Galileo is slated to begin operation 2008. Together the two systems are expected to become a single world standard for positioning and radio navigation. (ANS)

**

DX

In D-X, keep an ear open for GB6LOG. This is a special events station on the air through August 18th to celebrate the 60th anniversary of the Liberation of Guam during World War 2. The station will operate on all modes. QSL via the RSARS QSL Bureau to receive the special QSL from this station. For further information contact G0SWY by e-mail to G0SWY@aol.com (GB2RS)

And hams on Gibraltar have been granted permission to use the special prefix ZB300 during the month of August. This to celebrate the colony's three hundred years of British sovereignty. If you work ZB300, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: SIGHTLESS UK NEWSREADER TAKES TO THE AIR

And finally this week the story of a U-K ham who has overcome physical disability to become a news anchor for the Radio Society of Great Britains GB2RS News. Jeramy Boot, G4NJH, in Nottingham has the rest of the story:

--

Now news about a new GB2RS newsreader. Annick Morris, M0HDE, of Wigan, Lancashire, became a GB2RS newsreader two when she read the news through the GB3MR repeater. What makes this special is that 18-year old Annick has been blind from birth.

She has a specially-adapted laptop computer which accepts Word files, and which has a single-line display consisting of raiseable dots which form characters in Braille. Annick can read Braille fast enough to read out loud from this, although she can only 'see' one character at a time.

In the future Annick will be newsreading on 6 metres, 2 meters and 70 centimetres and it is hoped that she may also transmit on two bands at once.

Jeramy Boot, G4NJH.

--

This is not the volunteer first job that M0HDE has been successful in.  At age 14 Annick attended the "Child of Achievement Awards" in central London after impressing organizers with her determination to overcome obstacles presented by her disability. This award recognizes the efforts of young people under the age of 16 who make special efforts to overcome personal disability or illness while also managing to help others.  We at Amateur Radio Newsline welcome Annick Morris, M0HDE, to the worlds ever growing ham radio news reporting teams.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm).  Our e-mail address is newsline @arnewsline.org.  More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

And this note.  Because our staff will be in Huntsville to present the Young Ham of ther Year Award there will be no update on the 661-296-2407 line on Friday, August 20th.  Phone users are asked to utilize another of the automated phone lines operating in other regions.  Our 661-2407 line will update to the latest newscast on Monday, August 23rd.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim

Damron, N8TMW, and I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

just
>one order of magnitude, it's going to start hurting traditional broadcasting.

Since you're using the percentage of population figure, it wouldn't be
share. It would be rating, a much smaller figure. The percentage of
the total population listening to anything is far less than the
percentage of persons using radio at a given time.

I'm also not convinced that satellite subscribers are regular radio
listeners. If they are, they're probably not listening to satellite
exclusively and are sharing the time with conventional radio.
Remember, the traffic and weather channels serve only a small segment
of the population and fewer within that population actually listen to
it or know it exists.

I believe most satellite listeners left radio some time ago and are
sampling the new medium. Unfortunately for me much of what I disliked
about terrestrial radio has been taken to the sky: mindless, yelping
jocks on some channels mispronouncing the names of local cities I got
XM and SIRIUS to get away from the Party Martys of the world (there
are many others) only to find they're there. I turn it off just as I
turned off my FM radio before it.

>But Sirius' and XM's business model doesn't require advertisers....it's
subscription,
>and the subscription model is more efficient than the advertiser-supported model
(as
>XM seems to have found out).  We don't got to show you any stinkin' ad agencies,
and
>could care less what numbers they're looking for!

Approximately 40 of the 100 channels are commercial. I assume they

hope for some ad income. How will they convince an agency that people
are listening to commercials? There's no reverse data stream that
monitors what I listen to.

>Except, you've noted, when you listen to NPR.  And NPR's programming on Sirius does
>do underwriting announcements, too, you know.  Not exactly being deluged with
>advertising matter, true, but it's still a far cry from being an advertiser-free
>zone.  So considering how desireable NPR listeners are, it might just be the bleeding
>edge on where satellite "advertising" dollars starts seeping to.

Neither service claimed to be advertiser free. Both said that
non-music channels would carry spots. Until recently, even some music
channels did. I've always expected News, Talk and entertainment
channels would be commercial.

Part of what terrestrial radio sees as competition involves listeners
moving to some other service and advertisers doing the same. I haven't
heard any broadcaster complain that satellite radio is siphoning ad
dollars away.

Rich

>

I just returned from a visit with some relatives and found their media
habits interesting, and rather discouraging.

Their radio listening, such as it is, is confined almost exclusively to music on public radio. And most of their music listening is from CD's, not radio. They get 100% of their broadcast news from television, totally ignoring NPR, one of the country's best all-news radio stations, and a multiple-Murrow-award winning news/talker. In my time with them no radio in their house was ever turned on, and the car radio (as opposed to the CD player) was used only sporadically.

Of course, these people are "55+," so radio doesn't want them. And their 19-year-old son has an XM subscription. I've never heard even one of his favorite bands on the air anyway, so I'm pretty sure radio is completely irrelevant to him.

Hoping I can hang on for a few more years...

Mark Howell

If you mean Jim Bohannon and Bernie Ward, the subjects of this thread, you're correct...Jimbo is 10 PM-1 AM Eastern (7-10 PM Pacific), and Bernie follows on KGO at 10 PM-1 AM Pacific (1-4 AM Eastern).

I believe Bernie used to be carried on the "ABC News & Talk" satellite radio channel, which ABC programs on both XM and Sirius. Looking at the schedule now, it appears the slot is filled by whoever is doing the old Sam Donaldson ABC Radio slot on the bird now, and a repeat of Sean Hannity. The channel no longer carries any KGO hosts (I think KGO overnighter Ray T. was also carried back then) or any non-syndicated ABC O&O hosts.

I bought XM radio service just before Christmas (December 2003), so my experience is not even a year long.  However, in my case, getting XM changed my radio listening habits around 98%.

The *only* time I have my radio on (regular) FM is Saturday mornings

at 10:00am for NPR's Car Talk. With that exception, my XM is always
in use. Once XM adds channel 133 in September (Public Radio stuff) I
may not even need to do that.

If you take n=100 meaning the time that I am listening to the XM
signal, I would guess about 40% of the time I am listening to XM talk
stations (usually CSPAN or the comedy channels, occasionally CNBC and
CNN, every now and then Fox). The remaining 60% is music, and that
varies based on my mood and the time of day.

Absolutely the #1 selling point for me was reception *everywhere*.
MountAINS OF Pennsylvania, coast of North Carolina, never any fadeouts
or other reception issues. (Well, I shouldn't say NEVER. On some
roads, like the Pa. TUrnpike where there are hills right next to the
road, the satellite can't see the antenna and I get occasional
dropout. But almost perfect, and far better than AM or FM.

Since PBS went commercial, I get more for my $10/month on XM than I
ever did with a membership to a public radio station.

By Stephen Leahy
Aug. 16, 2004

Korean scientists have found that regions near AM radio-broadcasting towers had 70 percent more leukemia deaths than those without.

The study, to be published in an upcoming issue of the International Archives of Occupational and Environmental Health, also found that cancer deaths were 29 percent higher near such transmitters.
.
Two years ago an Italian study found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome.

The Koreans looked at the death rates in 10 regions with AM radio-transmitting towers broadcasting at more than 100 kilowatts and compared them with control areas without transmitters. The substantially higher cancer mortality in those who lived within two kilometers of the towers led researchers to conclude that more investigation was needed.

However, they also said their study did not prove a direct link between cancer and the transmitters.

"There have been many studies like these, and they aren't very convincing," said Mary McBride, an epidemiologist at the British Columbia Cancer Agency. Many other factors could have contributed to those cancer rates, said McBride, who has headed a number of similar studies and found no direct link.

Equally important is that studies in the lab don't show how radio waves can produce cancers, she said.
Debate continues over the health effects of radio waves from transmitters, both large and small, and other forms of electromagnetic fields, including power lines and microwaves.

Sam Milham, a Seattle-based epidemiologist and a pioneer in electromagnetic-field research, is convinced there are health effects. "Lots of research papers from around the world show increased cancers near transmitters, although TV and FM transmitters are more often implicated."

Moreover, many lab studies show low-frequency EMF disrupt living cells, Milham asserts. Critics like McBride say such results are often difficult to reproduce at other labs. Milham says that's because of differences in the Earth's magnetic field and stray EMF.

In an attempt to settle some of this, California's Department of Health Services reviewed all the current studies of EMF risks from power lines, wiring and appliances in 2002. It found no conclusive evidence of harm. However, links to childhood leukemia, adult brain cancer and Lou Gehrig's disease could not be ruled out.

"I'm convinced that politics and corporate interests are behind denials (that say) there are no health effects," said Milham.

Meanwhile, the FDA and the World Health Organization are urging more studies, especially of radio waves from cell phones.

Actually, I meant Jimbo and C2C. I'm not familiar with Bernie Ward. Jimbo hasn't been carried in Detroit since WXYT went full-time sports some three years ago. WJR is the only mainstream non-sports or non-men's issues talker here, and during Jimbo's timeslot it carries Schlesinger.

I even got on Jimbo's show once 5 years ago. I'm still batting 1000 when it comes to getting unto talk shows - 7 times called in  - 7 times on the air in 40 years!

Gary

For god's sake DONT tell the NAB about that! They are still running around
telling everyone that satellite radio is just a fad, its going away and cant
succeed. Meanwhile, back at the IBOC ranch they are STILL trying to get it
to work and sound good. Plans to destroy the AM broadcast dial is still in
the works. This is the NAB's answer to a fad that wont be around <smile>
Meanwhile....XM, Siruis and Worldspace continue to get new customers. More
and more channels get added, the choice gets better. Car units, home
units,Computer units. Around the corner are "Walkman" style radios, armband
holders for XM's Roadie. It will be easy to listen to satellite radio
everywhere.
Here is whats going away....Multipath distortion,commercials,stupid
DJ's,commercials,stale traffic reports,commercials,dumb contests,
commercials and did I mention commercials?

EAT SHIT NAB!!!!  hear the driving public, were tired of your manhandling of
the radio offerings. The satellite providers are giving us what we want.
Programming, news,talk,traffic,weather,comedy,albums,all genre of music
WHERE we want, WHEN we want it and how we want it and its here NOW and
getting better all the time.
As far as IBOC goes, GO SUCK AN EGG, yep...it will take off just like AM
STEREO (another failure). KISS OFF NAB! you have trashed the public listener
way too long, we now have a choice and will exercise it. Oh sure! you will

have holdouts that wont pay for radio. Remember when they wouldnt pay for television too?
Other "Fads" that wouldnt make it either...Color TV....Microwave Oven...Cable TV..personal computer (who the hell would even need one).

The Media Preservation Foundation web page www.jingles.org has been expanded to include audio files of  jingles, links to other jingle web pages and other radio related "curiosities".
The web page is :
http://www.jingles.org/mpf/mpfaudio.html

Since www.reelradio.com has such a large number of airchecks on line, the Media Preservation Foundation will instead exhibit jingles, commercials and other historically interesting audio files.

The first files include for the first time anywhere the early 1950's Modernaires custom jingles for KLAC, out takers of the famous Drake "Rum Pum" sessions of 1969, "inside the mix" PAMS cuts from Series #18, #24, an others for KYLE and Jingles American Style Sampler - Volume 1, a jingle sampler produced by jingle collector Fred Vobbe in Ohio.

The audio section will be updated several times a month. The plan is to add five to ten new audio files each month.

In addition, internet resources for radio historians and jingle collectors, http://www.jingles.org/Links.htm, has been introduced. This is both a links page and a data base page with information pulled from the Foundation's paper archives. The most complete accounting of TM Productions jingle packages is among the data base items.

The Media Preservation Foundation also has available the most complete account of the history of radio ID jingles ever published: the book "The Hits Between The Hits". It traces the post World War II growth of local radio, the evolution of local programming, the roots of Top 40 radio and the introduction and development of radio ID jingles.

Did anybody check for PCBs and (other) known chemical carcinogens in the
environment?

Oh...well, as far as the stations being able to carry both Jimbo and
C2C...yes.  C2C's live clearance starts at 1 AM ET last I checked (10
PM PT).  But Premiere dumps a few hours of last night's show as a
"pre-feed", so some stations out west carry the show as early as 8 PM,
and some in the Eastern zone carry the show as early as 10 or so!

>>
> For god's sake DONT tell the NAB about that! They are still running around
> telling everyone that satellite radio is just a fad, its going away and
> cant
> succeed.

No, they are not. The only thing the NAB has asked is that both satellite providers fulfil on the promise and the license taht stipulate that there will be no localization of channels.

Most NAB members realize that satellite has a very good position along side radio, TV, cable, X-Boxes and microwave ovens as part of the mix of products available to Americans. There have always been a percentage of Americans who don't listen to radio (about 5%) and listen lightly (5%) who seek something other than the fare on terrestrial radio. Reggae in Minneapolis, Classical in Prescott, Hip Hop in Fargo, Salsa in Des Moines... things that a nationally significant group want, but which group is insignificant on the local level.

Satellite complements terrrestrial radio, and it will be a long time before it competes.

>Meanwhile, back at the IBOC ranch they are STILL trying to get it
> to work and sound good.

It's working and sounding good on about 400 stations now. And there are over 2000 more committed to adding it in the next few years. Factories are working overtime to produce the new transmitters and antennas, and orders are backloged.

> Plans to destroy the AM broadcast dial is still in
> the works. This is the NAB's answer to a fad that wont be around <smile>

IBOC was not the NAB's idea. It was invented by a private company, and invested in by a group of broadcasters.

> Meanwhile....XM, Siruis and Worldspace continue to get new customers.

Worldspace is nearly bankrupt, and does not serve the Americas at all.

XM has 2 million subscribers nationally after just short of three years of marketing. 2 million is less than the cume of one news station in New York City. One station has more listeners than all the subscribers to XM. Sirius is so far behind the dust has settled between them and XM, too.

> More
> and more channels get added, the choice gets better. Car units, home
> units,Computer units. Around the corner are "Walkman" style radios,
> armband
> holders for XM's Roadie. It will be easy to listen to satellite radio
> everywhere.

No, it won't. The satellite signal does not work well on hand held devices that are in motion, and in office reception is, at best, tricky. I know. I had 6 units in a building 2 misles form a repeater, and they hardly ever worked.

> Here is whats going away....Multipath distortion,commercials,stupid
> DJ's,commercials,stale traffic reports,commercials,dumb contests,
> commercials and did I mention commercial

Well, how 'botu this: 95% of Americans listen to land based radio weekly.

>
> EAT SHIT NAB!!!!  hear the driving public, were tired of your manhandling
> of
> the radio offerings.

The NAB is a trade association. It does not dictate programming, commercial policy or music. Market forces do that.

> The satellite providers are giving us what we want.

That, then, is why only 1 out of every 150 Americans has it, and evne those people listen to twice as much land based radio as XM or Sirius?

> Programming, news,talk,traffic,weather,comedy,albums,all genre of music
> WHERE we want, WHEN we want it and how we want it and its here NOW and
> getting better all the time.

Great. Go listen some more.

> As far as IBOC goes, GO SUCK AN EGG, yep...it will take off just like AM
> STEREO (another failure).

AM stereo was too late to market, when no one cared about AM. IBOC is dual band, digital and has the backing of thousands of stations and dozens ofreceiver manufacturers.

> KISS OFF NAB! you have trashed the public listener
> way too long, we now have a choice and will exercise it. Oh sure! you will
> have holdouts that wont pay for radio. Remember when they wouldnt pay for
> television too?

Cable stated when the average person had 3 TV choices or less, often with snow and static. LA has 87 commercial radio choices. There is no comparison.

> Other "Fads" that wouldnt make it either...Color TV....Microwave
> Oven...Cable TV..personal computer (who the hell would even need one).

IBOC.

Radio today has as much per-person weekly listening as it had the year before the TV freeze was lifted, when less than 43% of Americans could receive one TV signal. We have had the transistor, TV, color TV, CATV, Cable, video games, the Internet, and lots of other entertainment sources. Radio is very resilient.

I agree 100%. I would have been happy with Sirius, I'm sure. i dont like sports, so its oldies & comedy but mostly business & news and both companies excell in those areas.  I hope BOTH companies do very well.....

There is no reason for AM & FM to exist with these two services. I didnt even know the continuous weather & traffic were provided when I bought the radios. My wife & I find the (XM) traffic we have to be so much more thorough- and accurate- than the 12 seconds the local FM stations give that utility for the satellite companies is more than local broadcast staions can ever hope.

I guess I was mislead on the Sirius 1 yr requirement if its not the case. I do think the lifetime subscriptions should be of the subscriber. though. When built into a car- you know that could be totalled tonite.

Dave

Some late 80's and early 90's Delco OEM units were pretty good. I had an amazing radio (including AM Stereo) in a '92 Eldorado. Unfortunately the car is gone now, replaced by a better vehicle with an inferior radio.

>sensitivity & selectivity similar to the GE
>Superadios?

Yes, try a Becker.

The better models have SW too.

That's a bit of a stretch.

I have both SIRIUS and XM in both the car and house. Neither one will replace terrestrial radio for local service. The traffic and weather services serve only 20 or so major markets. The closest maket covered for me is Boston, more than 100 miles away.

Rich

Well, I live in the northeast, around NYC. I was asking because I
would like to avoid having to have two antennas period. Why still use
another antenna when there is a good one already installed?

There is an excellent technical article in the July 2004 edition of
"Radio Guide". It is on page 8, under the heading, "The Canadian
View".
Since the author isn't employed by any of the major American broadcast
companies, he's able to tell it like it is.

Never ending mis-statements of fact and lies on radio talk shows. The talk show industry should be ashamed of itself!
From a national talk show host:

"Only 5% of greenhouse gases are man-made; the other 95% is the result of PHOTOSYNTHESIS in plants!"

fact: OXYGEN is given off during plant photosynthesis- not greenhouse gas (CO2)

(the host has received numerous corrections from around the country but continues to recite this error on a regular basis)

here we go again:

"We get 50% of our oil from Saudi Arabia!"

same host- one month later: "We get 8% of our oil from Saudi Arabia"

fact: according to the Congressional Research Report, the correct figure is 17%.

The best that I have found when I got a the car stero price guide that comes out every year is the high price sony have the best selective 8db.  Any sony over $250 should be @ 8db sleective all the cheapers ones are about 9.3 to 9.8.  I have a kenwood kdc 422 good radio good selectivaty and a 54" hifi car antenna got it from NAPA good setup pulls in those far away stations great.

No, you're trying to use the power of government (FCC) to take away first amendment rights of talk show hosts.  That is a far cry from "I am here just to expose all the liars..."  You came into this forum flaunting your letter to the FCC with some sort of expectation that they should be some sort of truth police.  You don't need to try and revise what you said here earlier. You came into a broadcaster's group and tried to tell them the FCC should penalize talkers you feel are liars.  What kind of response did you really expect?  Nobody needs you, or the FCC, to determine for them what the truth is.

I'm looking for a Phillips module that has been obsolete for some time now. Hoping that someone may have some old stock on the BGY-33 or BGY-133 amplifier module.

Thanks

Jim

Depends on whether the antenna is a one-lead or a two lead.  I've
heard Blitzsafe has an adapter that connects both.

Best bet is just to get a Sky Fi or Roady2 for home use and put it on
the family plan.  It is only $7/month more.

LOCAL SERVICE!!!???? Oh, yeah... like the Friday night local high school football games (NOT!!!). Of course, theres the full news staffs that are down at the PD every morning checking the overnight troubles (NOT!!!!). More local service is always available though... like the 24 hours of intensive RELEVANT news coverage for the audience, oh, wait... I forgot. The one "news rip & reader" goes home at 10AM and studies reading skills since there is no more news that day! But of course, theres always the local talk show hosts like Limbaugh, OReilly and Franken.....oops, NOT!!!!!!

But of course there is the local DJs on the music stations. Like Stern or the 2 clowns from Jacksonville.... or any of the others that Clear CHannel sends all over the country via their owned digital progamming computers!

Yeah, Right Rich. Get your head outta yer butt and admit it: You aint read a PSA about a church bake sale in 35 years!

If you live 100 miles vrom Boston and not toward hartford or Providence, junior, YOU DONT NEED THE TRAFFIC SERVICE! You need to open your eyes to make sure there is no deer running into your path.

Get over it: tv channels, cable & OTA are no more than libraries for TIVOs and OTA radio is listened to less each year by IPod fans & satellite SUBSCRIBERS- that is, youse guys is history. The sopranos will do you in.

By the way Rich, does either SYR or TPA mean anything to you?

Wanted to buy:

AM radio station.

The "Radio Crazy" it is baaaakkkk!!!!

I want to buy a "Dog" (i.e. loser, miserable, "dark" etc)AM radio station cheap! Ideally would have seller financing with little or no money down or would consider TBA with an option to purchase.

Prefer full-time station(s) with real estate. Any market considered.

We don't mind if station is "dark" and/or losing money as long as the FCC license is intact and is not being challenged.

We do NOT want "pure" daytimers. At midnight the station must be authorized at least 50 watts.

I am a semi-retired broadcast engineer. Last job in radio (2001) was Chief Engineer for a 5 KW directional full-time AM in New York City. Am I "diplomat with portfolio" or what!!! LOL! Hi Hi! (At least am an arrogant SOB, eh?)

References:
a-My parole officer. Mr. Larson E. Rapp, c/o Zing Zing prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade references: Recently purchased a one-way ticket to Rio on Brazilian Bandit Airways using all unmarked small bills. Don't worry, I won't leave until after I have stopped my check to you! (grin!)

The references are in jest. The desire for an AM is VERY real!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman.

Depends on whether the antenna is a one-lead or a two lead.  I've
heard Blitzsafe has an adapter that connects both.

Best bet is just to get a Sky Fi or Roady2 for home use and put it on
the family plan.  It is only $7/month more.

WABC has nothing to do with the New York Message Board. It's run by an
```

itinerant dentist radio groupie.

It's my understanding that WABC's own mesage board was shut down a
number of years ago. I shut down WOR's message board for the same
reason. Too much racist, homophobic, right wing crud. I had more
important things to do with my day.

> because of numerous complaints-not evidence);

Wrong. Payola has been investigated only a few times. The most recent case
was when a record company turned itself in when a high exec learned the
company was doing this. Prior to this, the incidents generally came out of
tax evasion or some unrelated investigation. Listeners would have no idea
this is happening.

There have nbeen fewer than a dozen convoictions in the last 45 years.

> but when it comes to an
> appearance of plugging products for the same purpose (under-the table

Because there must be proof.

what is your application? why 3 stereo busses?  usually a PGM, and AUD, and
a MONO TEL will do it for a radio station.

For those who may be interested, I have posted as a Web site all of the planning documentation for my serious micropower FCC Part 15 AM radio broadcast station. It is also a primer for those who may want to put something similar on the air.

It includes an equipment placement and inter-cabling diagram; several lists of equipment and parts, with their makes, models/part numbers, prices, and sources; cabling; audio routing; tests; and planned operation.

The main page is a narrative with links to specific pages. All are printer-friendly.

Please see:

http://members.aol.com/K5BY/MP_Radio/MP_Radio0.htm

Best wishes,
Bill in SE Texas

When the government controls a company and tells is what to do in order to get rewarded with more station licenses or get punished with not getting those licenses renewed, then it is censorship.

Don't be fooled into thinking that a company that was making a lot of money with Stern would decide on their own to drop him and lose money.

The fact that Clear Channel is crying and complaining to the government now that they are doubly screwed now that Infinity is putting Stern back in those markets and hurting the profits of Clear Channel stations all the more, should wake you up to what is really going on here.

> Censorship would be the government telling a cable news channel that they
> cannot use a particular slogan.

Or telling Clear Channel they can not have any on air talent saying anything negative about Bush.

I'd have to agree with your parents. The musicianship in the big bands was miles ahead of almost anything coming out of the rock and roll era. And I say this despite being of the boomer generation myself and having grown up on rock and roll. Nevertheless, I know quality when I hear it.

Rock and its descendents are, basically, glorified folk music that has always extolled the virtues of emerging from the People, whether from the "street," the "garage," or the "hood." Music of our parents' generation came from the sophisticated pros in Hollywood and on Broadway, all of whom were proud of their craftsmanship. BIG difference.

Not this again.  Look, this is not an investment how-to
course.  If you are thinking about investing, everything
else equal, a low PE ratio is best.  Correct.  It means
that the stock is priced relatively low compared to its
earnings.

So why would Clear Channel have the lowest relative value?

> Your definition is wrong. P/E is a measure of past
> performance, not of attitude.

Of both, because stocks are bought and sold both on
past performance and perceptions their future success.
If the stock prices contains attitude, then the P/E
contains attitude.

In comparison, republitards are all attitude, no performance.
But you can always buy one.

>> simply that dumping Howard had a negative impact on

> None whatsoever.The billings on 6 stations in morning drive
> are not even a grain of sand on a beach to CCU.

That is probably true, unless morning drive shows drive
ratings for the station at other times and the stations are
in large markets.  They sure seem to be crying a lot about
Stern coming back in those markets for a company that should
not care.  If not for the billings, why the tears at his
return?

>> Add to that a boycott of Clear Channel stations,

Well, no....the issue here is whether any entity can use a deceptive slogan in order to appear to be what they are not.  Just as a timeshare company can't use the slogan "where the real estate is free" (unless it IS, of course, but what would be the point of that?) the FTC is being called on to refute Fox's claim that they are "Fair and Balanced", when they are, by the consensus of professionals qualified to make such judgements, not.  Regulation is not censorship, as there are, despite what your take on the Constitution might be, limits to "free speech".  There are numerous Supreme court cases which bear this out...of course, this one, if it gets that far, will probably have to go that far to be determined one way or the other.

Here we go again! I posted this elsewhere on this message board.

Here's the FCC's letter to me from Norman Goldstein; Complaints and Investigation Branch; Enforcement Div; Mass Media bureau of the FCC:

"The Commission has stated on several occassions that deliberate falsification or distortion of news or information is patenntly inconsistent with the public interest. However, in light of the sensitive First Amendment values that are involved, an inquiry will not be made of a station unless we receive extrinsic evidence of deliberate distortion or falsification--for example, statements from insiders or those who have direct personal knowledge that facts were deliberately falsified. In this way, the Commission does not become a national arbiter of the "truth" of what is broadcast over the airwaves, nor does it judge the wisdom or accuracy of what is broadcast.

In the "absence of substantial extrinsic evidence or documents that on their face reflect deliberate distortion" the Commission does not deem it useful or appropriate to inv

Signed, Norman Goldstein- FCC Mass Media Bureau

Now what else can you make of that other than:

1. The affirmative of his statement applies: i.e. :In the PRESENCE of substantial extrinsic information which reflects deliberate distortion- the
commission WILL make an inquiry!"

2. If the FCC becomes suspicious that broadcast laws are being violated- here is a crime investigating agency that does not go out and investigate their suspicions- rather, by their own admission- they sit in their offices by the phone- waiting for some "insider" to CONTACT THEM! Can you believe that "UNLESS WE RECEIVE STATEMENTS FROM INSIDERS- we will not take acton!"

Funny how playing a song over and over- inflames the public and FCC takes action on payola to D.J.s because of public clamour- but continually lying about products raises no red flags at the FCC because, I guess, they don't get enough complaints!

The FCC says that falsification of the news is "Inconsistant with the public interest!"

They also say that "They WILL take action (make an inquiry of a station)if they receive information from extrinsic sources that can substantiate intentional falsification or distortion."

If falsification of the news, or medical facts, or product information on the air is against the public interest- will you please give me the name of the agency or person who looks out for the public interest in this matter of broadcast fraud and to whom I should play my tapes?

I seriously doubt Shell would find Air America's tiny audience of much
value in "spreading the word". It has a lot of growing to do before
it'll show up on any ad agency's radar.

Is there such a thing as Top-40 anymore? I think at some point, everyone was so into their own format (rock, rap, alternative, etc.) that few people explore any music out of their own "ghetto". Probably has to do as much with self identity issues as it does with plain intellectual laziness...

I'm in almost the same boat.  Moving this week, with both Sirius Audiovox PNP1 and XMPCR home kits, and expect to use an antenna extension for the XMPCR to get around a brick wall to my south.  While I can't formally proclaim compatibility, I can advise that your chances are excellent with the Delphi 50' extension cable, available at:

http://store.myradiostore.com/anexcasa.html

That cable can extend an XMPCR antenna, which itself is compatible, in my testing, with the home antenna for the Audiovox PNP1.  Because of a few mm of additional shielding, the XMPCR antenna header doesn't fit as deeply into the Audiovox cradle as Audiovox antenna does, but it does deliver a good Sirius signal.   So the XMPCR-compatible extension cable is definitely worth a try.

For Sirius at home, best to aim your antenna toward the opposite coast, or straight up if you're in the midwest.

Good luck

Jerome

Sorry, I can't seem to find Bob Orban's reply to this. But I agree with Bob that the encoding scheme is very robust about dealing with group delay issues. Even so, I have found the actual skip performance poor to the point of unusability.

Bob, do you have a citation on any actual measurements of this stuff? Ionosonde data is easy to get, so it should be really easy to build a simulation of ionospheric distortions in matlab or something, even if you just take into account group delay and multiple reflections. Has anyone actually done any simulations on the current encoder to see how it survives under various simulated skip conditions? I'd be curious to see which of the various skip characteristics is the most serious issue.

I have a small VO project (2 local radio spots) in the works.
Open casting call for actors and amateur voice artists. No union talent.
SPECIFICATIONS:
I will need one female voice to portray a real estate agent for a

single VO, and a 20-something male and female who can play a young married couple, and who can record together for natural interaction in a conversational style.

You'll need a professional-quality, low-noise recording setup,
The ability to send the dry voice-over in a studio-quality MP3 file,
and I'll need to be on the phone to direct the VO.

Will require maybe 15 minutes of work.  Pays flat rate $50 per voice.

Requires ACTUAL Roanoke, VA dialects.  Delivery style must be natural and emotionally sincere--no "DJ" delivery.  No voices that are currently familiar to Roanoke radio or TV audience.

Send contact information (no demos!) to:  scotty@scottymatthews.com

Thanks!

Was "our" a Freudian slip?  Those were not 6 stations in
tiny markets in the middle of Montana.

> Clear Channel stock has very closely treacked the sector,
> with no indication that anyone gives a hoot about Howard on
> wall Street.

Listen to the show.  You would be surprised how many
people on Wall Street listen.

>> It is about politics, democracy, and freedom.  Clear
>> Channel is the same station that issued a banned-song list
>> after 9/11,
>
> Wrong. Several PDs, on thier own, made lists of songs tht
> might be sensitive, especially if played near news reports
> or commentary about 9/11. It was an example of
> self-discipline, not censorship. No song was banned.

Of course, the PDs just happened to have the same list,
and Clear Channel just happened to be the only station
with PDs sharing such a list:
http://www.f---edcompany.com/extras/clearchannel_email.cfm
http://www.chartattack.com/damn/2001/09/1707.cfm
http://news.dmusic.com/article/6118
http://slate.msn.com/id/1008318/

And the torture camps in Iraq were just several soldiers
releasing tension on their own, even though Rumsfeld
approved it.  Clear Channel has the advantage of not being as
closely watched as the White House, but blaming underlings is
the standard, accountability avoidance method in
corporations.  It allows them to punish/fire/relocate/rehire
without being sued.

>> stopped playing Dixie Chicks after they criticized

Do you have a reference to support this?
http://www.metroactive.com/papers/metro/04.24.03/censorship-0317.html
http://iml.jou.ufl.edu/projects/Spring04/Hale/index2.html
http://www.detnews.com/2003/entertainment/0303/29/d01-121866.htm

Or is that a legend plucked from your extensive urban
library?  Are we talking about first by a day or a
week?

Then the next question is, who was Cumulus owned by
at the time and what connections do they have, as
a bible-belt radio broadcaster second in size
to only, hmmm, Clear Channel?

>> and issued another banned song list after
>> the Superbowl indecency erectile disfunction.
>
> No such thing. Urban legend, like the other two.

Of course.  Just call it an approved playlist and
leave off the songs.
http://www.metafilter.com/mefi/31758

Just like their zero tolerance policy toward anything
the FCC considers indecent.
http://www.cnn.com/2004/US/02/26/wbr.stern.suspended/

Whether Clear Channel is a shill for Bush or Bush
is a shill for Clear Channel, remember that, in the
background, they are holding hands.

When it came time to decide, I asked myself which cell phone company I
really loved. The answer- none. Therefore, if you love cell phones
with mandated contracts and everything in the companies favor, you go
with Sirius. That includes a years non-refundable subscription,
perhaps a "lifetime" subscription which is good for only the lifetime
of one single radio. Wanna change cars? Change to fancier receiver?
You lose the money and have to buy another subscription. Higher
activation fees. Found this out at the last minute and went with XM
for that reason. No regrets.

>I think the ad issue is meaningless.  Both services have no ads on their music
channels.  Period.  To me, the real difference is between their respective mix of
service offerings.  Sirius has a much stronger news, public affairs, sports (*ALL*
NFL, NHL, NBA games), international content (WRN with content from two dozen
international broadcasters, as well as BBC News 24/7 and soon CBC Canada) and
topical discussion line-up.  If your interests skew this way, Sirius is the better
choice for you.  If you're looking for a greater emphasis on music, XM should get
first consideration (although Sirius does fine there as well, as far as I'm
concerned.)

Radio is no longer a growth industry. They killed themselves when Docket 80-90 allowed over a dozen stations in markets of less than 100K residents. Everyone increased power and competition all over. Then they increased commercial time. It became another worthless, unlimited commodity. All without increasing the ad dollars in a market. Always too stupid to learn from past mistakes, the radio industry is about to do it again and double the ad time available in all markets, and cut their audio quality at the same time. IBOC now has a way to reduce the bit rate and allow a second entirely independent audio channel.

Watch for the same to happen with the OTA digital tv multicasters. Their brains are also too far up their butts to see what happens when you quadruple the number of channels transmitted, quadruple the commercial air time available, quadruple program acquisistion costs and dont increase the potential audience (market size) or ad dollars.

There is no reason for OTA radio or television stations to exist.

AAvoid their stock at all costs, until they convince the government to allow foreign ownership. Then when Bin ladens family starts buying them up, SELL!!! Last exit to Brooklyn... last chance to turn around...

Were you mislead?  There's no need to sign a long term contract with Sirius.  One signs up for a year only if one wants a more favorable rate--ie: $9.99 a month vs. $12.95 a month for a month to month arrangement.  It's offered as an inducement to make a long term commitment. So, too, the "lifetime" (of your receiver) arrangement is perfectly voluntary.  (To me, that one was a non-starter--like making a bet that that the receiver was good enough and well made enough to outlast the payment.)  The activation fee is also mitigated some by signing up online.

So, I still think the real differences between the two have to do with the mix of program streams.  (An average of a few bucks a month difference for what are--in reality--both premium services will be negligible for most provided the programming is what they want.)
The fact that you say "no regrets" indicates to me that the programming offered by XM is satisfactory to you and that the different emphasis (more and more varied news/info channels) offered by Sirius was not

sufficient for you to go their way.

It's great to have a choice!  Glad you're happy.  I have Sirius and I'm happy too.

John Figliozzi

Paul Van House: << You can post a record, run down the hall, go to the bathroom, and be back in 2:50 for the segue. ... You still have dreams of a song running out and not being able to find the control room door. >>

LOL Back in the late 1950s, when I was Chief at KHBM, an Arkansas day-only kilowatter, I had a TV shop in town and got free radio ads, plus a stipend, for keeping an ear out on its operation.

One day, a tune ran out and -- dead audio. I waited a minute or so, and then drove the three miles at warp speed. Just as I was driving up to the station, the DJ came on (he was my favorite DJ) and apologized to the listeners for the technical difficulty.

When I got inside, I asked, What happened? He said, "I went to the restroom at the other end of the hall but I had the runs and couldn't get back soon enough."

I told him that my customers know that I'm the tech for this station and "technical difficulties" could ruin what little good rep I have. Just tell them the truth next time. <G>

He enjoyed getting out The Book and recording commercials for me by filling in the blanks appropriately.

By the way... When I visited the station in 2000, one of the old Gates reel-to-reels was still being used, in this case, by a local preacher to record a sermon. (Or was it a Bellow and Howl unit?)

Bill, K5BY

Since Clear Channel has not received any significant number of new station
grants (maybe non... I am not sure), this is a moot point. Every station
they have acquired has been via purchase or merger with the prior owner.
There is no potential for government influence here.
>
> Don't be fooled into thinking that a company that was making a lot of

They were not making that much money, reative to the enterprise billing, to
the fines, and to the potential for license endangerment.

> The fact that Clear Channel is crying and complaining to the government
> now

> wake you up to what is really going on here.

They are not complaining to anyone. They have filed a countersuit against
Stern and his agent over the contract. They seem to believe they should not
have to pay the contracts since Stern's show subjected them to fines,
endangered the licences and presented no guarantees of future performance.
>

That, obviously had nothing to do with it. The issue related to indecency,
not politics.

I don't have the citations at hand, but Googling Digital Radio Mondiale or DRM Radio should locate the site containing the DRM white papers, which discuss the issue of skywave reception at some length. I don't believe that anything similar exists for iBiquity's AM system, but comparing the details of its modulation scheme (symbol spacing and number of carriers in the COFDM bundle) with the data from DRM should tell you a lot.

>
> Was "our" a Freudian slip?

No. I am not even a Clear Channel shareholder.

> Those were not 6 stations in
> tiny markets in the middle of Montana.

No, they were in medium markets, such as Miami, Louisville, San Diego. In several of them, the show was not doing at all well, in several others it was among the top rated shows.

However, we are talking about 4 salable hours a day out of 16 on 6 stations out of 1200. None were in a top 10 market, and several are getting better numbers post-Howard than before. We are talking about maybe one-tenth of one percent of radio revenues, and that is assuming no replacement revenues are generated (which is not the case).
>
>> Clear Channel stock has very closely treacked the sector,
>> with no indication that anyone gives a hoot about Howard on
>> wall Street.
>
> Listen to the show.  You would be surprised how many
> people on Wall Street listen.

"Listen" is not the same as making investment decisions based on whether the show is on in Louisville. In other words, irrelevant.

>> Wrong. Several PDs, on their own, made lists of songs that
>> might be sensitive, especially if played near news reports
>> or commentary about 9/11. It was an example of

>
> Of course, the PDs just happened to have the same list,
> and Clear Channel just happened to be the only station
> with PDs sharing such a list:

That is what I said. Several PDs made up lists, and shared them. The idea was that no one remembers the lyrics to every song, and some might be inappropriate in the aftermath of 9/11, some might actually be appropriate in a morning show, and others subject to judgment calls.

The whole idea was to avoid offending listeners by playing a song that was inappropriate in that moment. That is, actually, what responsible broadcasters should do.

At no point were any songs prohibited or banned. Each PD at each station made individual decisions.

>> Actually, many non-Clear Channel stations did this before
>> Clear Channel ones did. Nearly every country station in
>> America reacted to listener outrage about the Maynes
>> comments and yanked the songs. The first were owned by
>> Cumulus, in fact.
>

> Do you have a reference to support this?

Yes. Billboard Airplay Monitor, BDS and R&R charts. Essentially, every country station in the US stopped playing Chicks songs. The reasons were really simple: either a listener poll or listener call ins demanding that their songs not be played.
>
> Or is that a legend plucked from your extensive urban
> library?  Are we talking about first by a day or a
> week?

The non-play was almost instantaneous, based on listener rage. And it lasted for months. Gradually the songs came back, but at a lower level than before. As hard as it may be for you to believe, most stations ask listeners what to play, and, in this case, country listeners sent a loud message of, "don't play them."
>
> Then the next question is, who was Cumulus owned by
> at the time and what connections do they have, as
> a bible-belt radio broadcaster second in size
> to only, hmmm, Clear Channel?

Oxnard and Santa Barbara and Saginaw are hardly bible belt. And Cumulus is a public corporation, run by John Dickey. It has no affiliation with any other broadcaster. And it is not second in size. So you are wrong on your assumptions on every point.

> Of course.  Just call it an approved playlist and
> leave off the songs.
> http://www.metafilter.com/mefi/31758

This one is simply outsiders who do not understand thaat radio reacts to public indignation, just like the Chicks. If you know that listeners don't want to hear songs, you don't play them. This is not banning any more than a supermarket, when offered mint flavored catsup, says, "a poll shows people don't want to buy it so we are not stocking it."
>
> Just like their zero tolerance policy toward anything
> the FCC considers indecent.
> http://www.cnn.com/2004/US/02/26/wbr.stern.suspended/

It's the law. The licenses are in jeopardy, and this is sensible diligence.

You have a real tough time reading a statement- then commenting on
it.

The statement was:

A person who says he is reading a news report verbatum right off the
> > wire service is a NEWS REPORTER

Simply agree or dis-agree with that statement.

Now- a person who intentionally mis-reads a news report off the wire service and lies about the news report- is a LIAR.

You can now make a comment on that statement.

So you see- you label the person according to what he does. He is both a news reporter and a commentator on the news. Some talk show hosts are labeled, "info-tainers" . They entertain and give out information. Some talk show hosts are labeled "dis-infotainers" ! They "entertain" by constantly lying on the air.

take this test.

Do you know of any radio talk show hosts who:

1. Report the news?

2. comment on the news ?

3. Fabricate the news?

4. Mis-quote people in the news?

5. Tell jokes.

6. Lie about medical facts?

7. Promote the sale of consumer products by lying about their attributes.

8. Lie about topis in general science, environmental science,toxicology, etc.

If you can not give an example of all of the above- I think you need to listen to more talk show hosts- then you'll know what this is all about.

Amateur Radio Newsline™ Report 1406  July 23,  2004

Amateur Radio Newsline report number 1406 with a release date of Friday, July 23, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Two important youth awards are made and one Georgia ham shares in both of them.  Find out who on Amateur Radio Newsline report number 1406 coming your way right now.

(Billboard Cart Here)

**

## ANDREA HARTLAGE, KG4IUM, NAMED ARNEWSLINE(TM) YOUNG HAM OF THE YEAR

Andrea Hartlage, KG4IUM, has been named 2004 Young Ham of the Year by the Amateur Radio Newsline.  And since this is a story about the success of the younger members of the hobby we asked our 2002 Young Ham of the Year, Josh Abramowicz, KB3GWY, to bring us the rest.  Josh:

--

It was only a few years ago that I got a call at the Hawk Mountain Scout Reservation in Schuylkill County, Pennsylvania, telling me to call someone from Amateur Radio Newsline. It was during that phone call, that started out as an interview, I learned of my nomination and selection as the Young Ham of the Year.

Andrea, it turned out, was with her grandparents on vacation in Florida at the time she got the call on a cell phone from Amateur

Radio Newsline's Bill Pasternak, WA6ITF. Here's her first reaction after getting the news:

"I'm very happy and excited."

Andrea, who earned her Extra Class license at the age of 14 - less than a year ago , was first licensed in 2000. She's 15 years old and going into her sophomore year at Grayson High School in Grayson, Georgia, north and east of Atlanta, where she's an honor student.

Andrea has been quite active since getting her ticket just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website. The Youth@HamRadio.Fun column. I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs."

Andrea is proud of her ham radio activity and is promoting the Amateur Radio service among youth.

"I spoke briefly at the Youth Forum in Dayton and I also led a Youth Forum at the hamfest, the local Rockville hamfest, and I also helped put hamfests on with the Alford Memorial Radio Club," she says.

She's also part of the ARRL's Big School Project and serves as a leader and teacher at the Richards Middle School Amateur Radio Club. There, she teaches electronic theory and has come up with a series of fun games to help reinforce the lessons.

So how did Andrea get started in Amateur Radio? She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things."

Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

Andrea has made quite an impression on hundreds and hundreds of people already. You can bet it won't be the last time we'll hear from her, now and in the future.

>From the 2002 award winner - Congratulations, Andrea, the 2004 Young Ham of the Year.

For Amateur Radio Newsline, I'm Josh Abramowicz, KB3GWY.

--

Andrea Hartlage, KG4IUM, will get her award at a special ceremony on Saturday, August 21st at the Huntsville Hamfest. In addition to a plaque from Amateur Radio Newsline Andrea will receive a gift of Yaesu brand ham radio gear from Vertex Standard and a week at Spacecamp courtesy of CQ Magazine. Vertex Standard and CQ are both major corporate underwriters of the Young Ham of the Year Award program. (ARNewsline (tm))

**

ANDREA HARTLAGE, KG4IUM AND JAY THOMPSON, W6JAY, NAMED TO RECEIVE HIRAM PERCY MAXIM AWARD

At almost the same time that Andrea Hartlage was getting word that she had been named as Amateur Radio Newsline's Young Ham of the Year
she was also hearing good news from the American Radio Relay League.
So was our 2003 Young Ham of the Year Jay Thompson, W6JAY.
Here's
Amy Abramowicz, KB3IJW, with more:

--

Both Andrea and Jay learned the ARRL's board of directors had selected them to receive the coveted Hiram Percy Maxim Memorial Award.

The ARRL board was so impressed by the nominations for each that they decided to give both of them the award. That means a cash prize of $1,500 each and a special plaque.

Amateur Radio Newsline spoke with ARRL President Jim Haynie, W5JBP. He says there's no doubt Andrea and Jay are the brightest stars among the young hams today.

"Both are just absolutely stellar examples of Amateur Radio and the young crowd that we're trying to encourage at the League," Haynie says. "You couldn't pick anybody any better than these two. And, I'm just amazed at their accomplishments and how they've managed to be so professional in all the things they've done.

"I've read some of their papers and when we chose them as the HPM award winners, what they had accomplished in their brief careers as amateur radio operators. The only thing I would say to young people is use these two people as examples because they are the best. They are the best of the best. And, speaking as president of the League, I congratulate them both and I admire them both because of what they've managed to do."

Mister Haynie also tells us the 1997 Amateur Radio Newsline Young Ham of the Year, Brian Mileshosky, N5ZGT, is in the same class. Brian was the 1999 Hiram Percy Maxim Award winner. He's now 24, married, heading to grad school in the fall, and still very active in Amateur Radio activities in New Mexico.

"All his work in Scouting and DFing and things of this nature that are the epitomy of Amateur Radio again for young people," Haynie says. "When I first met Brian, I was just blown away by his professionalism and how he handled himself as a young amateur. These three young individuals I think set the example and set the standard which we would like to see Amateur Radio go toward."

Mister Haynie says now that the Hiram Percy Maxim selections have been made for 2004, it's soon time to begin identifying candidates for 2005. You can find out more about the award, the qualifications, and the nominating process at www.ARRL.org.

To learn more about Andrea and Jay's accomplishments, you can also check out our website at www.arnewsline.org

For Amateur Radio Newsline, I'm Amy Abramowicz, KB3IJW.

--

We know that all of you join us in congratulating Andrea Hartlage, KG4IUM and Jay Thompson, W6JAY, on being selected top receive these very special awards. (ARRL S.W. Division Newsletter, ARNewsline (tm))

**

Break 1

More in a moment. Right now its time for you to identify your station. Tom Warrenbuerg if you please: "From the United States of
America, this is the Amateur Radio Newsline, heard on bulletin styations around the world, including the KA9EKG repeaster serving Delavan, Wisconsin."

(5 sec pause here)

**

HAM RADIO POLITICS: ARRL BARD MEETING

The naming of Andrea Hartlage, KG4IUM, and Jay Thompson, W6JAY, as winners of the Hirum Percy Maxim Award was only one of many decisions made at the recent meeting of the ARRL Board of Directors. Many of the Boards actions will impact on all of ham radio for years to come. Here's another Abramovich clan -- Mark Abramovich, NT3V, with
that part of the story.

--

In an historic step, the ARRL's board approved the launch of a grassroots lobbying campaign designed to raise awareness among legislators and government agencies about the Amateur Radio service.

ARRL President Jim Haynie, W5JBP, says there was careful deliberation before the board decided to launch the campaign.

"With all the things we have going on right now, such as BPL, our CC&R bill, our Spectrum Protection Act and even the restructuring program that we have it's time to raise our level of visibility," Haynie says.

Haynie says the ARRL board put the directors in charge of appointing volunteers to staff three positions in each division to work as Congressional Action chair, coordinator and assistant.

He says the chair would be someone who has had some experience in lobbying. A coordinator, with the blessing of section managers, would be selected for each state to work with the chair. And, he says, that coordinator would seek assistants to help spread the ARRL's message to congressmen and senators.

"This is a very orchestrated effort and I'm happy to see it happen," Haynie says. "It's something that's been needed to be done for a very, very long time. And it's a good thing, Mark. It really is. It's something we should have done years ago, actually."

Haynie says recent pronouncements by the FCC's chairman clearly pose a threat to the Amateur Radio service.

"I heard Michael Powell say at the NAB (National Association of Broadcasters) conference in Las Vegas this year that everything was on the table," Haynie says.

"All frequencies were on the table for various types of services. "So, Amateur Radio has got to get in there and make sure that it's voice is heard and its importance of the communities that they serve and the people that like to do volunteer work."

Haynie says the league will also ask members to get more active in contacting their representatives in the U.S. House and U.S. Senate to express their views or simply introduce them to the value of the Amateur Radio service in their communities.

"And I'm not asking the league members to do too much, actually, but sit down and write their representatives," Haynie says. "And you don't have to complain about anything. Just tell them about Amateur Radio. Tell them how much it's meant to you and your life and how it may have shaped it or changed it.

"I've said for years some of the finest people I ever met have been through ham radio. But there's many hams out there that have whole careers based on it. And this is too important not to bring the level of visibility to a higher plain."

In other board business, Haynie says there was considerable discussion of Broadband over Power Line internet access and the pending FCC action. Haynie says the board was encouraged that the Alliant Energy BPL trial in Cedar Rapids, Iowa was terminated early because of interference complaints.

He says that move sent a message to other electric utilities exploring BPL.

"It's several dozen utilities now that have looked at BPL and said that it's not something they want to get involved with," Haynie says. "And our message is not economic because they can figure that out for themselves. Our message is the fact that under Part 15, there are certain rules that have to be abided by and we want to make sure that they do that."

Haynie emphasizes the league's position on BPL is clear and consistent and can't be perceived as denying people access to technology.

"We're not against people having broadband access, we're really not," Haynie says. "It's the fact that the interference that this particular technology would bring to the HF bands is going to be a real problem and we've got to hold people's feet to the fire when they say that they're going to mitigate interference. That goes from the White House all the way down."

Finally, Haynie says he is growing cautiously optimistic about the BPL fight and the impact the ARRL's position is having on the industry and some in government agencies.

"I think that our message is beginning to get out, and, like I say, we're not confrontational" Haynie says. "We're just trying to say look at the facts, look at the engineering studies, look at the NTIA studies and draw your own conclusions. If you've got engineers on your staff, they're quite clear."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in

Philadelphia.

--

A more in-depth report on the actions of the ARRL Board will appear in an upcoming issue of QST Magazine.  (ARNewsline (tm))

**

RADIO RULES:  VANITY CALL SIGN FEEE GOING UP

The FCC regulatory fee to obtain an Amateur Radio vanity call sign will rise from $16.30 to $20.80 later this year.  According to the ARRL Letter, the FCC announced the new fee in a Report and Order in MD Docket 04-73.  Thats also known as the "Assessment and Collection of Regulatory Fees for Fiscal Year 2004" and the FCC says it anticipates 7800 applications for that time frame.  The FCC expects revenue collected from the vanity call sign regulatory fees in Fiscal Year 2004 to rise by more than $2100. The Report and Order becomes effective 30 days after it's published in The Federal Register.
(ARRL)

**

ENFORCEMENT:  CBS SAYS IT WILL NOT ACCEPT SUPER BOWL INCIDENT FINE

CBS says that it will fight any fines leveled against its television stations over Janet Jackson's startling Super Bowl performance.
This, according to a top executive with parent company Viacom Inc. on July 19th.

An  FCC staff recommendation did not call for fining CBS affiliates that aired the Super Bowl halftime show but are not owned by Viacom.
But CBS itself could face a fine of $550,000 or of $27,500 for each of its 20 owned and operated stations that asired the so called Janet Jackson wardrobe malfunction.

Now, in a recent talk before the Television Critics Association, Viacom co-president and co-chief operating officer Leslie Moonves criticiszed any fine as being grossly unfair.  He said that CBS considers the idea of a fine as  patently ridiculous and that the company will take the matter into court if such a penalty is imposed.  (Published news reports)

**

## ON THE AIR:  SAN DIEGO'S 96.9 MHZ PIRATE REACTIVATES

According to a news bulletin from Chris Carmichael, San Diego's 96.9 MHz pirate is back on the air.  No news on the location ofthe transmitter site.  (CGC)

**

## RADIO LAW:  HAWAII'S GOVERNOR VETOES AMATEUR RADIO ANTENNA BILLS BUT OVERICDE MIGHT BE ATTEMPTED

The ARRL Letter reports that Hawaii Governor Linda Lingle has vetoed two Amateur Radio antenna bills.  Both pieces of legislation would have provided limited opportunities for amateurs living under private deed covenants, conditions and restrictions to erect antennas.

HB 2773 would have opened the door for amateurs living in condominiums to make arrangements with the homeowners' association board to install an antenna without having to change the CC&Rs.  HB 2774 would have granted similar rights to the relatively few amateurs who live under CC&Rs in agricultural-zoned property.

Lingle, a Republican, invoked the same reason for refusing to sign both bills into law.  She said that the bills were objectionable because they  amount to an inappropriate and unacceptable governmental intrusion into the contractual affairs of the property owners.

But it may not be over yet.  According to word from former Westlink News Production Coordinator Bill Orenstein, KH6QX, there is a move afoot to overide the Lingle veto in the Hawaii State legislasture. Orenstein, who now lives in Hawaii could not say when the overide action might take place or if it had any chance of success.  (ARRL with additional information by KH6QX)

**

## HAM RADIO ON THE NET:  HAMBLOG.COM

www.hamblog.com is a new weblog host exclusively for amateur radio operators.

What is a blog you ask? Simply, its a spot in cyberspace where people post their thoughts and ideas on just about any subject. Some blogs let you do just that while others like hamblog.com are targeted to a particular subject. In the case of hamblog.com its our hobby of Amateur Radio.

Charles Brabham, N5PVL, who administers hamblog.com says that hams have a lot of information to pass on to each other but traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. He says that Weblogs are highly flexible and highly individualistic and they hope that hamblog.com will provide a wellspring of knowledge about Amateur Radio that would be impossible to access or distribute by traditional methods.

Oh yes. Charles says that the service is free of charge so go check it out. The URL is simply www.hamblog.com (Via e-mail)

**

HAM RADIO CONFERENCES: THE DCC IN IOWA IN SEPTEMBER

On the ham radio social scene, the 2004 joint TAPR and ARRL Digital Communications Conference will be held September 10th to the 12th. This, at the Airport Holiday Inn in Des Moines, Iowa.

As part of the program, confereence planners are now accepting papers for the published proceedings. Submission are due by August 10th and should be sent tyo Maty Weinberg, ARRL, 225 Main Street, Newington, Connecticut, 06111. You can also e-mail them to maty@arrl.org

And very important. You can even take part even if you cannot be there in person. Thats because you do not have to be present at the conference to have your paper included in the proceedings.

Again, thats the 2004 joint TAPR and ARRL Digital Communications Conference fropm September 10th to the 12th at the Airport Holiday Inn in Des Moines, Iowa. More information is on-line at www.tapr.org/dcc (VHF Reflector)

ARNEWSLINE™ SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again with some thank-you's, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

We'd like to take a moment to thank everyone who helped us during our
June
campaign. We heard from Brian Boccardi, N2MPM of North Brunswick, NJ; Lloyd Smith, WA9NLA and the Peace River Radio Association of Port Charlotte, FL; Billy Bryant, Jr., of Harvey, LA; The Reading, PA Radio Club, W3BN; Eric Olena, WB3FPL of Mohnton, PA; monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; our friends at the Dayton Amateur Radio Association; Mark Otspaih, also from Dayton Ernest Clark in Greenwood, IN; and C. Mark Burlingame, KB9TVD of Northlake, IL

The boss said I only have about a minute, so we'll have to do the rest of the list next week. Thank you to everyone. A reminder that Newsline is a 501c 3 California non-profit corporation. Information on how to support us is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy.  Now back to the news.  (ARNewsline (tm) Support Fund)

RADIO SAFETY:  CELLPHONE TAKES BULLET AIMED AT SUBSCRIBER

A South African merchant says he owes his life to the Nokia cellphone he was holding to his ear when he was ambushed by someone in a passing car.  Andre Steyn felt the bullet penetrate his hand, only to be stopped by the phone before it could penetrate his head.  The entire story is on-line at www.mobilemonday.net/mm/story.php?story_id=3653  (CGC)

**

RADIO ON THE ROAD:  THE SHRINKING SYNDROME

If you are finding the size of your car and your mobile rig shrinking, you are not alone.  According to Lee Cobb, W6TEE, writing in Worldradio Magazine, the actual size of automobiles has not changed much ion recent years, but the competition for space in front has.  As a result, under dashboard mounting of gear is almost out of the question due to such amenities as consoles and such.

But fear not.  Lee has some interesting notes on how to conquer the new car lack of space syndrome and ways her has found to get around the problem.  You can read all about it on Lee's H-F Mobile column on
Page 31 of the August issue of Worldradio on newsstands right now.
(ARNewsline (tm))

**

HAM CONFERENCES:  AMSAT-UK SPACE SYMPOSIUM

And AMSAT - UK is holding a Space Symposium at the University of Surrey from Friday the 30th of July to Sunday the 1st of August.  On the Saturday there will be special beginners sessions run by Howard

Long, G6LVB, aimed at those wishing to get into the fascinating world of amateur satellite communications. The RSGB GB4FUN van will be on site throughout the event.  For booking information and full program details take your web browser to www.uk.amsat.org or contact Jim Heck by e-mail to g3wgm@amsat.org  (AMSAT-UK)

**

WORLDBEAT:  DXPL NOW ON WRMI

Turning to news from around the world, this item for hams and SWL's
who listens to the D-X Party Line show.  Allan Graham, who hosts the DX Party Line has announced that the show will now be carried by WRMI each Sunday at 0300 U-T-C.   That's 11 PM Eastern and 8 PM on the West Coast on Saturday here in the U-S-A.  The frequency to listen on is 7.385 MHz.

WRMI is oned by the Florida based Radio Miami International and is heard throughout the Americas -- from Alaska to Tierra del Fuego -- in English, Spanish and other languages. The new schedule for the DX Party Line was slated to begin on July 24th.  (ASWLC)

**

WORLDBEAT:  SAQ NAMED WORLD HERIRTAGE STATION

SAQ, the Alexanderson alternator VLF transmitter at Grimeton in Sweden has been declared a World Heritage site by UNESCO.  According to the RSGB News, the decision was made by the World Heritage Committee of UNESCO at a meeting near Shanghai in China on the 2nd of July.

S-A-Q continues to make occasional transmissions on 17.2 kHz on CW. The last one was on the 4th of July.  (RSGB)

**

ON THE AIR:  NEW PROPAGATION BEACONS IN CM88

Some new propagation beacons to report.  K7XC reports over the VHF

Reflector that as of 05:00 U-T-C on July 19th the KJ6KO 2 meter, 1 and 1/4 meter and 70 centimeter beacons in grid square CM88 are all clearly audible at his home in Fallon Nevada.  Thats grid DM09.

The new beacons operate on  144.282 at 40 watts into a pair of loop antennas.  The 1 an d 1/4 meter unit is on 222.014 with 25 watts into two stacked loops and the 70 centimeter beacon runs 100 watts into four stacked loops on 432.292 Mhz.   KJ6KO says that he would apreciate any Q-S-N reports.  Send them to his Callbook address. (VHF Reflector)

**

DX

In D-X. word that members of the United Kingdoms Wrexham and District Amateur Radio Society will be operating from the Isle of Man froom September 1st through the 8th.  The exact operating location will be Scarlett Point which isd a decomisdsioned Coast Guard look out tower, approximately 1.5 miles South of Castletown,  Isle of Man.  Operation will be on all High Frequency Bands, plus 50Mhz, 70Mhz, and 144Mhz, at full UK Power. The team is expected to operate on at least 2 H-F Bands simultaneously, and will be running CW, SSB, RTTY, PSK and some SSTV.  More is on the teams website at www.gb4iom.co.uk  (GB2RS)

Also word that Andorra is now on 6 meters.  According to ON4IQ, Andorra has released the 6 meter band to all resident amateurs.  He reports that C31JI and C31HK are both already active on the band. (GB2RS)

**

THAT FINAL ITEM: SOMALIA GIVES HAM RADIO INCREASED POWER LIMITS

And finally this week, the ARRL Board Meeting was not the only place where things were ham radio changes were happening last week. Another was the nation of Somalia which has acted to grant its ham radio population a power increase to 3 kilowatts.  Thats right.  We said 3000 Watts and thats 3000 P-E-P for SSB and 3000 watts average for other modes.  Somalia is also letting hams use of the 88 to 108 Mhz band for F-M and permitting Amateur Television broadcasts to be conducted on any unoccupied standard VHF or UHF television channel. WIA newscaster Graham Kemp, VK4BB, has more:

--

Yes the Ministry of Information, Telecommunication and Culture in Somalia has made these changes and more as part of action to implement the W-R-C 2003 accords.

And the Ministry has also made additional frequency allocations for amateur radio experimenters in Somalia. Radio Amateurs in that nation can operate on additional bands including Zero to 9 Kilohertz, from 70 to 90 Kilohertz and 130 to 190 Kilohertz. On Medium Wave frequencies include 495 to 526 Kilohertz, while on the High Frequencies the hams of Somalia get 5.060 to 5.450 MHz and 26.100 to 29.700 MHz excluding 27.995 the sliver band from to 27.999.

This Ministry is promoting Somalia as the best holiday and research destination for visiting radio amateurs. This, as a way of attracting skilled people to help the local Somali people become ham radio operators. Abdikariim Ali Sulatn in Puntand State Somalia confirmed again that Aussie Amateur Sam Voron, 6OA, will continue to conduct ham radio license qualifying courses and issue amateur radio licenses free of charge "in the name of this Ministry" until a national Somali Amateur Radio Society is formed.

And, oh yes. If you are planning to go there, a Somali Visitors Amateur Radio License is now issued to any class of overseas amateur radio license holder as a courtesy. It is free of charge and issued for life unless canceled by the Somali Government. Talk about an inducement to visit a far off land.

Reporting for the Amateur Radio Newsline, I'm Graham Kemp, VK4BB,
for
the WIA News, in Brisbane, Australia.

--

According to a Somali spokesman, as of now, no other country provides radio amateurs with more frequencies or a higher transmitter power output. He added that Somalia welcomes visiting radio amateurs from throughout the world. (WIA News)

Hello,
I have just purchased an '04 Accord EX that has the stereo with XM installed. I have 3 free months as a trial, but what I would like to do is after the three months purchase the portable XM unit, since I would really like to be able to listen to XM radio inside my house. I was wondering if it was possible to use the factory XM antenna, that is already on the roof of the car, and connect that one to the portable XM unit. I really would like to avoid having two antennas on the roof of my car. Is this possible?

-Jay

> > > wire service is a NEWS REPORTER

Ummm...who read the story and in what context?  Generally speaking one wouldn't comment on something unless the audience has an idea of what is being commented on.  Therefore oftentimes the commentator would *read* the story, then comment.  Any part of that too difficult for you to understand?

You seem fixated on having government decide what the *truth* is.  This has been tried.  Communist China comes to mind.  Of course their version of the *truth* may have differed from other versions of it.  The beauty of America is that we can listen and then decide for ourselves what we should believe. Call it a natural selection process.  People who are gullible usually get what they deserve - it's not the job of government to protect them.

Perhaps you are trying to obtain power for yourself.  Since you have proclaimed yourself as "Mr. Fact" and you seem to think you have a rare gift of seperating fact from fiction, then perhaps you are the smartest person in America.  We could just let you decide what we hear and see on radio and television.  That could lead to broadcasters bribing errrrrr....... encouraging you to allow them to broadcast.  Hell - we'll just make you the Information King of the World.  Everyone else is just too stupid for you.

Since Clear Channel has not received any significant number of new station
grants (maybe non... I am not sure), this is a moot point. Every station

they have acquired has been via purchase or merger with the prior owner.
There is no potential for government influence here.
>
> Don't be fooled into thinking that a company that was making a lot of

They were not making that much money, reative to the enterprise billing, to
the fines, and to the potential for license endangerment.

> The fact that Clear Channel is crying and complaining to the government
> now
> that they are doubly screwed now that Infinity is putting Stern back in

> wake you up to what is really going on here.

They are not complaining to anyone. They have filed a countersuit against
Stern and his agent over the contract. They seem to believe they should not
have to pay the contracts since Stern's show subjected them to fines,
endangered the licences and presented no guarantees of future performance.
>
>> Censorship would be the government telling a cable news channel that they

That, obviously had nothing to do with it. The issue related to indecency,
not politics.

This is no joke, not hype, not advertising. I just did not know what to do when I found out what is happening. Around my town, most folks are brain dead to this opportunity (plus I am a compulsive Mad Broadcaster).

I need investors to be part owners in buying FM license(s). This year the Gov. is going to be auctioning off almost 300 FM licenses; some for pennies on the dollar. I am a licensed engineer, and know this stuff. Contact me before Aug. 15th if you want to own (with me) several or just one FM station yourself. Don't let the big bucks guys (like Clear Channel, Fisher, etc.) suck all these up.

I am stuck with having to mention it this way as I am just a person like you who knows of this great opportunity and I for one do not want to see it pass by; there may not be an opportunity like this for 20 years. Email me here: maccds152@excite.com

 Here's some more copied VERBATUM from FCC literature. Unfortunately,
I don't have the details as to where it's found in their literature.
Somewhere in Rules and Regulations:

       From FCC literature:
The Communications Act prohibits the FCC from censoring broadcast
material, and
from making any regulation that would interfere with freedom of
speech. EXPRESSIONS OF VIEWS THAT DO NOT INVOLVE A CLEAR AND PRESENT
DANGER OF SERIOUS SUBSTANTIAL EVIL COME UNDER THE PROTECTION OF THE
```

CONSTITUTION, which guarantees freedom of speech and freedom of the press."

The above does not imply but INFERS (based on logic)the positive statement: "Expressions of views that DO present a clear and present danger of serious substantive evil DO NOT come under the protection of the Constitution!" In other words-lying which has the INTENT to do bodily harm or psychological harm to others- is against the law! Even, by chance, if a commentator's original injurous (to mental or physical health) statement was not made with an intent to injure his listeners- HIS LATER KNOWLEDGE that his statement has the potential to cause injury and his subsequent INTENT not to CORRECT his original statement- well, this matter of events certainly demonstrates that he has left the door open to serious injury or death on the part of his listeners and is open to government action against him.

Here's another example of YELLING "FIRE" (when no fire exists) in an auditorium (an auditorium of millions of listeners, each at home or work listening to their radio)

A national radio talk show host and news commentator told his listeners that the vapors of a widely used consumer product (a liquid) are safe to breath- however the product's federal MDSD (SAFETY DATA SHEET-written by toxicologists)- says that the vapors are poisonous and can cause liver or brain cell injury or even  death. An investigation into who heard this fraudulent toxicology and ACTED UPON IT- will show that they suffered a grave health risk (if they aren't dead now). The reason why this host has not been sued yet for actual damages- brings up the distinct possibility that this fraudulent toxicology was no doubt, passed on from one person to another, so there is no clear paper trail linking any health damage or a death to its original source (the commentator) Also-any victim may now be dead, so he can't tell what he heard that caused his death!. (Some victims may be sick and don't know why!)This example of illegal radio broadcast fraud (false medical advice and toxicological lie)needs to be investigated by the FCC and the host needs to be ORDERED to correct his lie and to cease discussing any more medical matters before he injures or kills more people. This host has a documented history of spreading false medical claims on the radio. He is no different than a medical quack. Again- enough of these examples by a commentator ought to prompt some kind of inquiry by the FCC as to his INTENT.

If this example doesn't qualify as a "clear and present danger of serious substantial evil" I don't know what does. The overwhelming appearance of impropriety of this host's discussion of medical matters, not to mention his documented lies about science, lies about the environment, lies about consumer products, fabrication of news events,mis-quotes of people in the news and slander(I have recorded on tape)-demands an FCC investigation.

The talk show host/news commentator never corrected or apologized for this this toxicological lie.(there are many others) We can only infer that some sinister motive is at work-i.e.- he was PAID by the manufacturer of that posonous product to lie about its health effects in order to promote sales! This activity is certainy a violation of

Federal TRADE Commission law.

The FCC is fully aware of the details in this matter, but refuses to even investigate, let alone enforce, the broadcast law under its jurisdiction.

Hundreds of medical lies,consumer product lies, name calling, slander,mis-quotes of people in the news,news fabrications,general idiocy and FCC VIOLATIONS are now ON TAPE. I will play these tapes (1 hour long) FOR FREE to any group of 100 people or more- in high schools, universities, any formal or informal meeting, and radio or television stations (as a guest speaker with station host; caller phone-in format). The tapes are for educational purposes (to educate citizens about the decrepit state of American radio broadcasting today!) Along with the broadcast garbage, I present the facts.

This expose is a good venue for looking at the mis-information in broadcasting today, discussing facts, examining the credibility of broadcast commentators, discussing and exposing FCC law violations.

This means the stock is undervalued. That seems to be the opinion of
Morningstar, and several other investment services I use.

Your use of "low" is inaccurate. Clear Channel has the "best" PE ratio of
the stocks being discussed. Part of this is due to the fact that they have
low debt service (a lower debt to equity ratio than even General Electric,
for example) and are an ongoing enterprise dating back to 1975.

The PE has no attitude. Nor does it have anything subjective in it. The PE
is simple a math calculation.
```

They were on medium markets. Miami being the largest, but being a big
underperformer and low biller due to the high ethnicity. Second was San
Diego, market 14 or 15, and one of a cluster of 9 or 10 stations. The rest
were even less significant.

>  They sure seem to be crying a lot about
> Stern coming back in those markets for a company that should

Crying? All they doing is suing to get out of a contract. They are not
whining about Stern returning.
>
>>> Add to that a boycott of Clear Channel stations,
>>> products, and advertisers, and you have a more wide spread
>>> impact than just the 6 markets.
>>
>> There is no such boycott.

When a boycott exists in name only, it does not exist. No effect, nobody
cares. I can put an online petition and post in alt.Howard.stern or
whatever, but that does not make my ranting a real boycott. It is just
whining by Stern addicts.

Was "our" a Freudian slip?  Those were not 6 stations in
tiny markets in the middle of Montana.

> Clear Channel stock has very closely treacked the sector,

>
> Wrong. Several PDs, on thier own, made lists of songs tht
> might be sensitive, especially if played near news reports
> or commentary about 9/11. It was an example of
> self-discipline, not censorship. No song was banned.

Of course, the PDs just happened to have the same list,

and Clear Channel just happened to be the only station with PDs sharing such a list:
http://www.f---edcompany.com/extras/clearchannel_email.cfm
http://www.chartattack.com/damn/2001/09/1707.cfm
http://news.dmusic.com/article/6118
http://slate.msn.com/id/1008318/

And the torture camps in Iraq were just several soldiers releasing tension on their own, even though Rumsfeld approved it.  Clear Channel has the advantage of not being as closely watched as the White House, but blaming underlings is the standard, accountability avoidance method in corporations.  It allows them to punish/fire/relocate/rehire without being sued.

>> stopped playing Dixie Chicks after they criticized
>> Bush/Cheney,
>
> Actually, many non-Clear Channel stations did this before
> Clear Channel ones did. Nearly every country station in
> America reacted to listener outrage about the Maynes
> comments and yanked the songs. The first were owned by
> Cumulus, in fact.

Do you have a reference to support this?
http://www.metroactive.com/papers/metro/04.24.03/censorship-0317.html
http://iml.jou.ufl.edu/projects/Spring04/Hale/index2.html
http://www.detnews.com/2003/entertainment/0303/29/d01-121866.htm

Or is that a legend plucked from your extensive urban library?  Are we talking about first by a day or a week?

Then the next question is, who was Cumulus owned by at the time and what connections do they have, as a bible-belt radio broadcaster second in size to only, hmmm, Clear Channel?

>> and issued another banned song list after
>> the Superbowl indecency erectile disfunction.
>
> No such thing. Urban legend, like the other two.

Of course.  Just call it an approved playlist and leave off the songs.
http://www.metafilter.com/mefi/31758

Just like their zero tolerance policy toward anything the FCC considers indecent.
http://www.cnn.com/2004/US/02/26/wbr.stern.suspended/

Whether Clear Channel is a shill for Bush or Bush is a shill for Clear Channel, remember that, in the background, they are holding hands.

Nothing on Usenet irritates me more than people who insist on morphing to avoid killfiles, and since the major participant in this thread is doing so, nothing more will be posted in this thread.

I am pretty forgiving, but morphing is a sure way to get your posts roundfiled. Don't do it.

>> contains attitude.
>
>The PE has no attitude. Nor does it have anything subjective
>in it. The PE is simple a math calculation.

Really?  Do stock prices have any attitude?  Anything subjective?

>They were on medium markets. Miami being the largest, but being a big underperformer and low biller due to the high ethnicity. Second was San Diego, market 14 or 15, and one of a cluster of 9 or 10 stations. The rest were even less significant.

Yeah, like Orlando and Pittsburgh.  Clear Channel owns 7 stations in Orlando, 6 in Pittsburgh.  Can you handle the numbers?  Just simple math, right?  Did I mention 7 in Rochester, NY?

Markets like LA, NYC, and Chicago are massive, beyond large. Less significant does not equal non-significant.  Or do you have some simple math to back that up?

>>> There is no such boycott.

A couple more plus a Google link so you can stay in touch with reality:

http://www.howardstern.com/action.html

http://www.freestern.com/F%20Clear%20Channel.html

http://www.google.com/search?hl=en&ie=UTF-8&q=boycott-clear-channel+howard+stern&btnG=Google+Search

>When a boycott exists in name only, it does not exist. No effect, nobody cares. I can put an online petition and post in alt.Howard.stern or whatever, but that does not make my ranting a real boycott. It is just whining by Stern addicts.

You sound like a disgruntled former owner of a bankrupt Web radio station.  Just because nothing you do on the Web has become real or affected anyone, you conclude that is the way it is for everyone.  Poor logic on your part makes ranting.

Listen to the show.  You will here real people calling in from all over the U.S. about their successes and failures in boycotting Clear Channel.  Even if it was just me, and I am not even a regular listener, not listening to Clear Channel radio stations or buying tickets to events they promote or not buying products advertised on their billboards, that would still be a boycott.  Just a tiny one.

Have you ever lost a radio station license because of programming that the FCC found offensive?  I wager not.  Are you aware of the current rules and regs regarding license forfeit?  First time? A whopper of a fine (which Howard will get hit with personally along with the stations).. and the second incident anytime during the renewal period? License goes Poof if the FCC feels that the offense was worthy of it.  Since the average station is worth a huge pile of dead presidents, and the black mark would go against the corporate owners, that puts a whole lot of stations at risk.

After some of his stunts, I'm surprised Howard has any stations still affiliated. The license threat is real. Why do you think they dumped Bubba the Love Sponge?  Possible license loss....

Heck- all I've been doing is reading stuff from chemical and medical journals and textbooks.

If you think that the statements, "Styrofoam is bio-degradable" or "nicotene is not addictive" or "Dioxin is not a health hazard" are just someone's subjective opinion- fine! Most of us out here, (including chemists)consider the statements  LIES or the opinions of an idiot.I am here just to expose all the liars and idiots who host radio talk shows today. I am simply dis-crediting them. If you're too lazy to open a textbook or a scientific journal and find out the facts for yourself- simply continue to accuse those who DO open those books- as communists who want to control you!

> sensitivity & selectivity similar to the GE
> Superadios?

As a general rule almost any car radio will have better sensitivity and selectivity than the GE SuperRadio III (I own two), where reception within cars falls apart is instead what antenna is used and noise from the engine, car electronics and noise sources outside the vehicle.  The SuperRadio is a pretty good radio for what it is, but most likely your lack of reception especially AM reception is caused by the antenna setup you have and noise rather than the radio.

I won't bother discussing the audio quality of AM radio sections, but you asked about sensitivity and selectivity rather than audio.  Improve the antenna and get rid of all the noise you can in the vehicle.

>  How about a talk show host who reads a news story from a news
> service posting and inserts his own LIES in the story- and passes it
> off as having been read verbatum? HuM?

How do you know that? The news services the media get are often not the same content as what you can get for free online. And a news commentator can, legitimately, insert comments as they read a story. An analogy would be a movie commentator who inserts comments between movie clips.

>> Rush Limbaugh, in the 1988 R&R Talk Radio Seminar in Washington, stated
>> he
>> was first and foremost an entertainer. Talk shows are listened to for
>> their
>> entertainment value. News shows are listened to for their informational
>> value.
>>
>> Paraphrasing a Spanish saying, "you can't get pears from an elm tree."
>
> Who ever brought up the name "Limbaugh" in all this? Why would you
> immediately mention Rush Limbaugh regarding this topic of falsifying
> the news?

I brought up Limbaugh because he made the statement I wanted to cite. If Mickey Mouse had made it, I would credit the rhodent instead. The point was to show that even the most listened to host is aware that talk shows based on commentary are entertainment.

> Limbaugh is hardly an expert at labeling himself.

And out of the millions who listen to him, you are the only one perceptive enough to spot a lie? Or maybe the other 19,999,999 people realize he is commenting, engaging in hyperbole, making fun of things, and generally trying to entertain.

> Sorry-
> when ANYONE professes to be reading facts (wether from a news service
> or from a medical journal)- and inserts his own LIES and then tells us
> "I'm reading this verbatum"- YOU may label that "entertainment" but I
> think most of us label it something else.

You label it your way. You are playing salmon in this argument, and doing
some serious swimming upstream against the current.
>
> p.s. Are you Rush Limbaugh posing as David Eduardo?

No, I Am The Walrus.
>

uh....no he's not. If he reads a news item, then comments on it, he is not a reporter, but a commentator. Commenting on the news item he just read. Now if someone does this, you've heard the news story and you've heard the opinion. You can decide. Oh wait - you want to decide for everyone else what they hear. Maybe you could try China. Or Cuba.

For sale:

(The "Radio Crazy" is baaaaaakkkk!)

Partial interest in fulltime AM radio station in Southern Georgia. City of about 16,000 population and a nice one at that!

This is a joint venture. Active or inactive investors with at least $10,000 each are welcome. No individual can hold over 49 percent interest. This means me too!

There is an element of risk and you could lose all or part of your investment. (Standard disclaimer....."they" make me do it! LOL!)

References:

a-My parole officer. Mr. Larson E. Rapp. c/o Zing Zing prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference......Brazilian Bandit Airways, Oshlosh, WI. Purchased a one-way ticket to Rio using all small and unmarked bills. Do not worry, the trip will not commence until we have your funds!

Tel: (478)741-1710 in Macon, GA. Do not block your caller ID, it will not ring in that case!

Only those fully indentifying themselves will be given callsign and city of license.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman

IBOC blows! It's NAB's answer to satellite radio. IT AINT GOING TO WORK. XM
& Siruis are kicking your ass with local weather and traffic offerings. So
called "FREE" radio is exactly what you get for your money.
For the narrowminded broadcasters I guess Satellite radio is a fad, yes
sportsfans a "Fad"..just like satellite TV,just like cd's and DVD's.Just
like microwave ovens.
CBS/Infinity/Viacom has it's head squarely up it's ass. At least
Clearchannel has the smarts to get involved in satellite delivery, Mel
Karmazin was a complete joke! turning his back on the newest form of
broadcasting,AND forbidding streaming audio from ANY CBS stations.

This is the first time I've seen this in print, although I've seen rumours (some

of
which I'd started myself) relating to Canada's adopting rules for satellite radio
broadcasting (e.g. Sirius and XM).

>From the CBC website:

If licensed by the CRTC, the CBC-Standard-Sirius application will immediately
offer
Canadian subscribers across the country approximately 100 digital audio channels,
including more than 60 music, information, sports and other channels from the
three
partners. A number of CBC/Radio-Canada stations will also be added to the Sirius
lineup in the U.S., which already includes offerings from BBC World, National
Public
Radio and Public Radio International.

http://www.cbc.ca/story/arts/national/2004/07/08/Arts/satradio040708.html

With the use of the word "immediately", it appears that Sirius will be using the
same
birds for Canadian operation.  Doesn't surprise me.  But as I say, this is the
first
time I've seen it in print.

I always thought "kicking ass" meant you were a leader in a market. Since both XM and SIRIUS combined have fewer subscribers than most major market stations have listeners I don't see how "kicking ass" applies here. Especially since the 2.6 million total subscribers are spread over more than 200 channels. That would leave 130,000 listeners per channel if all had equal audiences. The traffic and weather channels would further reduce the number of listeners because they're specific to fewer than 25 markets. I believe there's only one market in all of New England (Boston) that's covered by their traffic services. The rest of us have no option other than terrestrial radio.

I also doubt a full-time traffic and weather station would be economically viable even in New York or Los Angeles.

>CBS/Infinity/Viacom has it's head squarely up it's ass. At least
>Clearchannel has the smarts to get involved in satellite delivery, Mel
>Karmazin was a complete joke! turning his back on the newest form of
>broadcasting,AND forbidding streaming audio from ANY CBS stations.

Clear Channel has significantly reduced its interest in XM and Infinity is doing very well without the tiny, unsalable streaming audience. Local advertisers don't care about coverage in Bombay and the same products have different names in different countries. It also makes an advertiser's desire to black out certain markets where advertised sales are not happening impossible unless the station uses a commerial insertion service to avoid streaming spots where agencies haven't paid the talent for use in outside markets or for streaming in their home market.

I'm sure Mel Karmazin is sobbing uncontrollably knowing you don't approve of his business strategies. I'm also sure his and Viacom's bank accounts will show he's been pretty effective.

I think you just like satellite radio and are giving it much more influence than it really has. Reports of radio's death and the influence of satellite radio are greatly exaggerated, at least at this point in time.

I have both XM and SIRIUS. 4 subscriptions total. I live in New England and have serious (no pun) problems with dropouts because many roads are covered by overhanging trees and there are no repeaters in the area. I also lose GPS signals. The other night I was driving in the country in a torrential downpour. I lost all satellite signals. Wet leaves are even worse. The radio goes dead silent every 30 seconds or so, depending on the foliage.

Rich

contact the coach(s) of the teams you will be doing. ask them who the team boosters are. like any other sport the boosters can be almost fanatical about the game and will be willing to talk about it as long as your phone batteries hold out :).  they may even supply a "color" person and/or a "stat" person to help out.

Actrually, the AM IBOC sounds far better than analog IBOC, even the kind of analog you could get on an older receiver and pre-NRSC. FM IBOC is a degree better than analog FM. The real issue is with occupied bandwidth, not the quality of the audio.

> It's NAB's answer to satellite radio. IT AINT GOING TO WORK. XM
> & Siruis are kicking your ass with local weather and traffic offerings.

Not really. Arbitron measures Sirius and XM in local markets if it is mentioned. In LA, it shows up in less than a dozen diaries out of 7,000.

As Rich says, there are 2.300,000 subscribers. Given what we know about radio usage, less than 10% are going to be listening at any one time, and that divided among over 100 channels. That means, maybe 200,000 AQH listeners, or 2,000 per channel at any one time. The #5 station in Traverse City, Michigan has more listeners.

> So
> called "FREE" radio is exactly what you get for your money.

Which, is, in fact, its biggest advantage. Couple that with the existence of about 700,000,000 "free" radios in the US vs. 2 million for XM and you get an idea.

> For the narrowminded broadcasters I guess Satellite radio is a fad, yes
> sportsfans a "Fad"..just like satellite TV,just like cd's and DVD's.Just
> like microwave ovens.

It is not a fad. It is a niche. A certain percentage will sign up, and it will be profitable and successful.

> CBS/Infinity/Viacom has it's head squarely up it's ass.

Rich answered this. They are ignoring streaming and satellite as one is not profitable and the other is too niche.

> At least
> Clearchannel has the smarts to get involved in satellite delivery, Mel
> Karmazin was a complete joke!

CLear Channel has, now, less than 2% of XM. And has stopped providing programming.

> turning his back on the newest form of
> broadcasting,AND forbidding streaming audio from ANY CBS stations.

It does not make money, and does not create local market listening.

I'm afraid I have to disagree. The most charitable spin I can put on
AM IBOC is that it sounds bad in a different way than analog AM sounds
bad, and to my ears, the analog is preferable. The damage IBOC does
to the analog signal is serious and quite noticeable on anything but
the very worst-quality receivers, the interference products have the

potential to do great damage to other stations, and IMHO it's a step backward for the sake of selling equipment.

As for FM IBOC, yes, the digital signal does sound better than a badly processed analog signal. It is a shade worse than a properly-processed analog signal. I produce a weekly program for a public radio station that is delivered as a 320kbps .mp3 file. That's lower quality than analog or "CD quality," and FM IBOC is worse yet. I will concede that to the typical non-audiophile listener, the difference is not noticeable without a direct A-B comparison.

However, there is an adjacent channel interference issue with FM as well, so the question arises, why are we junking up the band and reducing everyone's effective coverage area for something that is, looked at in the most positive possible light, just "not worse" than what we have? Just to be "digital?" Most listeners think they already have digital radios, anyway. (They show digits for frequency, don't they?)

I do not understand this at all, except that a few big corporations with a lot of lobbying clout stand to profit from it, if it becomes widely accepted.

Mark Howell

Another LIE from one of the fabricators in the radio talk show industry:

"There are two types of asbestos: one is potentially lethal and one is as harmless as a Cheez Doodle... The Cheez Doodle variety of asbestos is known as chrysotile. It accounts for 95% of the asbestos used in the United States. And it is utterly, totally harmless"

Fact: Experts disagree over how serious a health risk is posed by chrysotile asbestos found in buildings. But there is no debate over the fact that chrysotile asbestos- has killed thousands of asbestos workers by giving them lung cancer and pulmonary fibrosis (asbestosis). There is no word from the EPA about the possibile toxicity of Cheez Doodles.

Question: why would a national talk show host lie about chrysotile asbestos? Was (is) this host being paid by the asbestos industry for trying to encourage his listeners to pressure their representatives in Congress to lay off the asbestos industry with further regulation- through the use of THE LIE?!

There is a continuing appearance of impropriety- i.e FCC law-breaking by radio talk show host(s) who are promoting consumer products through the use of THE LIE !

There was one in LA about 9-10 years ago: KTRK-1650 or something like
that. (One of Saul Levine's experiments?) Didn't last particularly
long, probably because no-one listened to it all day, they just listened
for their particular area/trip and then tuned to another station
for music, news or whatever....

Why?  for he same reason? lack of interest?

Quad didn't catch the publics fancy. now if they had marketed it as "home theater system super surround sound  (HTSSSS tm)" and dropped the QS, the SQ, and the CD-4 labels... why we might still have walls full of 8 tracks <grin>

Here's the playlist for 07-18-04:

07-18-04

Palisades Park-Freddy Cannon
See You Later Alligator-Bill Haley & His Comets
Dear Lady Twist-Gary US Bonds
Suavacito-Malo
She Loves You (stereo German version)-Beatles
Cry Baby-Garnett Mimms & The Enchanters
Cara Lin-Strangeloves
We've Got Love-Bobby Rydell
Heatwave-Martha & The Vandellas
Buzzzz-Jimmy Gordon
Nobody But You-Dee Clark
There Goes My Heart Again-Fats Domino
I'll Be Forever Loving You-El Dorados
Shy Girl-Cascades

Beach Time-Roger Smith
Since I Lost My Baby-Temptations
Seasons In The Sun-Terry Jacks
I Met Him On A Sunday-Shirelles
(Come 'Round Here) I'm The One You Need-Smokey & The Miracles
Hey Baby-Bruce Channel
Twistin' White Silver Sands-Bill Black's Combo
Let Me In-Sensations
Lonely Street-Andy Williams
Philadelphia USA-Nu Tornados
I Wanna Testify-Parliaments
Sweet Thing-Spinners
Heart Full Of Soul-Yardbirds
Tramp-Otis Redding & Carla Thomas
Perfidia-Ventures
To Love Somebody-Bee Gees
Can't Say Goodbye-Fireflies
This Diamond Ring-Gary Lewis & The Playboys
Gary, Don't Sell My Diamond-Wendy Hill
Indian Lake-Cowsills
Paper Tiger-Sue Thompson
Don't Ask Me to Be Lonely-Dubs

| >quality of the audio.
|
| I'm afraid I have to disagree.  The most charitable spin I can put on
| AM IBOC is that it sounds bad in a different way than analog AM sounds
| bad, and to my ears, the analog is preferable.  The damage IBOC does
| to the analog signal is serious and quite noticeable on anything but
| the very worst-quality receivers, the interference products have the
| potential to do great damage to other stations

Simple question:
If AM IBOC is such hot stuff, why is it restricted to daytime hours only?

I can now hear the damage it does to the analog signal on KCBS. The
effect varies from radio to radio, but on almost all of them, the
noise floor goes up when IBOC is on.

On a synchronous detector, it sounds worse...like a mosquito buzzing
in the background. That's true even in a regional park with no power
lines or people nearby. And, on my AM stereo radios with those detectors,
that's with the stereo decoder OFF.

What's next: analog radios with 2 kHz bandwidth so we don't hear the
buzzing noise placed there to serve receivers that don't exist?!?!?

| However, there is an adjacent channel interference issue with FM as
| well, so the question arises, why are we junking up the band and
| reducing everyone's effective coverage area for something that is,
| looked at in the most positive possible light, just "not worse" than
| what we have?   Just to be "digital?"

I suspect this is the back door through which DRM will slip for
broadcast radio.

That's because it's in quadrature, which is "invisible" (modulo transmission artifacts and channel noise) to envelope detectors. Your sync. detector is only detecting one sideband at a time, so the IBOC carriers don't cancel out.

(This is why I no longer listen to WBZ much during the daytime.)

None of the engineers I've talked to like the AM system. Some of them see it as having potential to bring back a long-lost audience, in spite of its significant flaws. Most of them see it as a pointless corporate mandate that will waste their engineering budgets, reduce their coverage areas, and dirty up their audio chains.

People I talk to in *my* business (computing, not broadcasting) are of the opinion that traditional, reserved-spectrum broadcasting will cease to exist inside of three decades, for various reasons, social as well as technological. (That's assuming it isn't already dead -- many

of the people I know, my age and younger, are simply no longer users
of radio at all.  It doesn't connect with them in any meaningful way,
nor does it serve their needs.)

Apologies to both groups if I'm in the wrong NG's.  I am looking for help in trying to receive my favorite radio station that is only 30 miles away on FM 102.3.  About 6 months ago, another station started broadcasting on 102.1 in a major city about 100 miles away.  All I receive now is a warbled distortion of the new station on my local station frequency.

I've tried different radio receivers in my car with no luck.  Is there any kind of filter or other device to help receive my old favorite?

--
Cheers!
Duke

Wanted to buy: AM "Dog" radio station.

(The "Radio Crazy" is baaaaaakkkkk!!!)

I am looking to acquire a cheap "Dog" AM radio station. Prefer with seller financing and with little or no money down. I don't care if it losing money and/or "dark" as long as the FCC license is intact.

Prefer with real estate.

I DO NOT want "pure" daytimers. Station should be authorized at least 50 watts at midnight local.

Finder's fee should I actually buy the station or enter into a TBA with or without an option to purchase.

Tel: (478)741-1710 in Macon, GA.

Station may be anywhere in the 50 states or Puerto Rico.

Not interested in the Virgin Islands. I am not suicidal! (Angry glare!)

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman

I STILL would like to know why we actually need IBOC.
On my car radio with AM stereo it sounded great.
Not to shabby either after the NRSC mask was mandated.  But then who
really listens to AM for music?

Analog FM if processed reasonably is capable of holding its own
against the original product.  I can see the advantage of IBOC
for FM, but not AM.  I suspect the whole  subject is just a scam
for someone to make money (hardware & licensing) and a way to
slip a *broadcast flag* on everything so it can't be copied.

Charlie

Mark Roberts <markrobt@comcast.net> wrote:
>
>If AM IBOC is such hot stuff, why is it restricted to daytime hours only?

Because the group delay that is the result of the uneven ionosphere prevents it from being decoded properly when the signal is received on skip, and the amount of stuff coming over the horizon on skip prevents it from being properly received when it's being received on groundwave at night.

>I can now hear the damage it does to the analog signal on KCBS. The

I wouldn't be bothered by this so much if the digital system actually sounded good.  But the audio quality of the digital carrier is actually a lot worse than good analogue AM.  It's like listening to Cylon Warriors.

There are no ads on XM music channels, just like Sirius.  Both have
ads on talk channels.  XM has more music channels and less talk.
Hence, fewer ads than Sirius.

Garrett> any meaningful way, nor does it serve their needs.)

Specifically, your "business" is computer systems support at a techie university, so I am guessing that the people you're referring to are students?  (If that's not the kind of people you're talking about, could you describe who you mean?)

Most of the people I know at MIT don't to any AM radio, but they may listen to a few NPR shows.  Entertainment is mostly not from the radio: music is on portable media or file-sharing networks. But MIT students (in my few decades of experience with them) are particularly un-representative of popular culture or societal norms. I think you would find that the people of the same age across the river at BU to have somewhat different behaviours.  When you say that it "no longer" servers their needs, I think maybe you're just suggesting that they now live on campus or in the tiny walking city (with demographics unlike anywhere else in the country, anyway), they don't like talk radio, don't drive cars, and are very busy studying. I would not base a prediction of whether people will be interested in broadcasting on the behaviour of MIT students, because they've

never been very interested in popular commercial broadcasting,
as it has never really served the needs of the uber-nerd subculture.

What shows do you listen to while driving in your car,
and what do you do for traffic reports, and how do you
get your local news and weather on video or while driving?

But I would be interested in hearing technical and societal arguments
about how traditional broadcasting won't be interesting or viable in
the near future, or even in 30 years.  (2035 is a long ways off, and
I think there could be major technological changes by that time which
could affect how broadcasting works.)

You will have to buy an Fm tuner, but the type that has a selectable "IF
bandwidth" (wide narrow, super narrow) such as the Kenwood KT 6040. I had
the same problem, but getting the 6040 was the cure for me

Does it have to be in your car?  The real solution for this is a directional
antenna combined with a good receiver.  Directional antennas are not
practical in the car.

We are pleased to announce the winners of the Mark Time Award for Best Science Fiction Audio theater and the Ogle Award for Best Fantasy Audio theater productions of the Year. The award is coordinated by the American Society For Science Fiction Audio (ASFSFA) and is sponsored by MISFITS, the Minnesota Society for Interest in Science Fiction and Fantasy. These are for productions completed in the production year, 2003.

Mark Time and Ogle Award Winners, 2004

�The Field� � Ogle Gold Award
Play It By Ear Productions
Lance Roger Axt, Producer. Written by Elizabeth Benjamin.
Pacific Grove, California

�Howl of the Mac C� Tire� � Ogle Silver Award
Roger Gregg, writer/producer.
Crazy Dog Audio Theatre
Dublin, Ireland
www.crazydogaudiotheatre.com

�A Murder of Crows� � Ogle Honorable Mention
Three short works for Halloween
Sam Mowry & Martin Gallagher, producers.
Willamette Radio Workshop
Portland, Oregon
www.radiowork.com

�The Convergence� � Mark Time Gold Award
Jeffrey Adams, writer/producer.
International Falls, Minnesota
www.storiesonmp3.com

�A Man Walks Into a Bar� � Mark Time Silver Award
The Arbiter Chronicles, Episode 2
Steven H. Wilson, writer/producer.
Prometheus Radio Theatre
Elkridge, Maryland
www.prometheusradiotheatre.com

�The ShadowMan� � Mark Time Honorable Mention
Marc Rose and Jerel McQuen, producers.
Dry Smoke and Whispers Holodio Theater
Transdimensional Media LLC
Beaverton, Oregon
www.drysmoke.com

Dirk Maggs � Mark Time Grand Master Lifetime Achievement Award
Producing excellence in science fiction and comics for the BBC and independently. Features include, Superman, Spiderman, Batman, The Gemini Apes, Voyage (by Steven Baxter), and currently the Tertiary Phase of the Hitchhiker's Guide to the Galaxy (the producer chosen by Douglas Adams himself).
See Maggs' website at: www.dirkmaggs.dswilliams.co.uk/.
You can see a short video and an audio preview of the new Hitchhiker's Guide, to begin broadcast in September of 2004, on the BBC website at: http://www.bbc.co.uk/radio4/hitchhikers/index_new.shtml.

The Mark Time and Ogle Awards are presented each year at CONvergence, a Minnesota Regional Science Fiction Convention held in July. See their website at http://www.convergence-con.org/.

You can find out more about past winners of the Mark Time Awards, and see the Mark Time SF Audio Hall of Fame at:
http://www.greatnorthernaudio.com/MarkTime/MarkTime.html.
And there�s more about MISFITS available at http://www.misfit.org/.

That's my take, too.  I had no trouble getting an AM audio chain to sound pretty
darn
good, mono or stereo, a situation which, from the assessments here (as well as the
samples provided by...was it Ron?) can't compare to what IBOC leaves you with.

The irony about your suggestion that IBOC is just a scam to get programming locked
down is that who would want to save the garbage that IBOC creates?

I gotta tell you....had I not quit the business in the 80s, I'd probably do so
now.
There's just no future in it, considering the crackerjacks who are pushing this
"innovation".  IBOC is D-O-A.

| I STILL would like to know why we actually need IBOC.
| On my car radio with AM stereo it sounded great.
| Not to shabby either after the NRSC mask was mandated.  But then who
| really listens to AM for music?

In San Francisco, if you want to hear an MOR station, you either
have an NCE-FM that has some limited coverage, or you have an AM
station (KABL) that still broadcasts in stereo.

In other cases, some specialty formats, mostly of the ethnic
variety, are available only on AM -- an exactly reversal of the
situation vis-a-vis FM 40 to 50 years ago.

| I suspect the whole  subject is just a scam

| for someone to make money (hardware & licensing) and a way to
| slip a *broadcast flag* on everything so it can't be copied.

Precisely! The control freakery being exerted by content providers
is just going to end up chasing people away from the media.

Scott Dorsey <kludge@panix.com> had written:
| Mark Roberts <markrobt@comcast.net> wrote:
| >
| >If AM IBOC is such hot stuff, why is it restricted to daytime hours only?
|
| Because the group delay that is the result of the uneven ionosphere prevents
| it from being decoded properly when the signal is received on skip, and the
| amount of stuff coming over the horizon on skip prevents it from being
| properly received when it's being received on groundwave at night.

I didn't quite expect an answer to a rhetorical question -- but it does
point to a very fundamental flaw in the scheme.

you need an outdoor directional FM antenna, like a YAGI.

I think the ad issue is meaningless.  Both services have no ads on their music channels.  Period.  To me, the real difference is between their respective mix of service offerings.  Sirius has a much stronger news, public affairs, sports (*ALL* NFL, NHL, NBA games), international content (WRN with content from two dozen international broadcasters, as well as BBC News 24/7 and soon CBC Canada) and topical discussion line-up.  If your interests skew this way, Sirius is the better choice for you.  If you're looking for a greater emphasis on music, XM should get first consideration (although Sirius does fine there as well, as far as I'm concerned.)

John Figliozzi

Another cure is to change the I.F. filters in your radio to those of a narrower bandwidth. The stock filters are probably either 230 or 280Khz bandwidth. If you change them to 150kHz filters (CF of 10.7MHz), your adjacent channel selectivity will improve quite a bit. If you really want super selectivity, you can install 110kHz filters............be advised, though, that the more selective filters have a higher insertion loss, and with the narrower bandwidth, both your distortion and your stereo separation will be degraded.

Pete

For sale:

(The "Radio Crazy" is baaaaakkkkk!!) heheheh.

Partial ownership in fulltime 1 KW AM station in S. GA nice city of about 16,000. About 4 acres of real estate, the building and tower are all included.

Total asking price is $225,000.

This is a joint venture. Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired. There is an element of risk and you could lose all or part of your investment.

No individual can own over 49 percent. This includes me!

Tel: (478)741-1710 in Macon, GA.

Its amazing the footprint for Sirius satellite radio. It covers all
the lower 48 US states, Mexico, a good chunk of the western Carribean,
almost all of Canada (except extreme North) and even a good portion of
Central America.

They have three satellites orbiting in a figure-8 pattern.

http://www.cbc.radio-canada.ca/htmen/pdf_rtf/satelliteradio.pdf

I wonder if they'll sell service in other countries as well?

Dave

According to my engineering friends at SIRIUS and the big satellite
display just off the lobby shows only two satellites in use at any one
time. One is rotated out to recharge.

So, effectively, both services have two operating satellites. In
heavily wooded areas of New England overhanging trees block the signal
from both services. I suspect the same is true in the Pacific
Northwest where you're often driving in tree-formed tunnels.

NASCAR is widely viewed as the sport of choice for good ol' boys
everywhere. So what's your point? Are you telling people to choose
the gay channel vs. the redneck channel?

It's a nice scenario but way off base. Most talk show hosts are neo-conseervatives who feel any government regulation is bad. One has even argued against the views of scientists concerning global warming.

One is science, the other is political opinion and ignorance. The problem is that the talk hosts have a bigger platform than the scientists.

As for your contention that they're violating FCC rules, please document which rules they're breaking. Unless you can prove they're taking money from corporations, there's no regulation governing inaccuracy by opinion.

Rich

This was sent to me by a former co-worker. I've been out of "the business" for a while so most of it applies to me.

You know you're an Aging Radio DJ when:

You were first hired by a GM who actually worked in radio, before becoming GM.

Radio stations were no place for kids.

You excitedly turn the radio up at the sound of "dead air" on the competitor's station.

Sales guys wore Old Spice to cover the smell of liquor.

Engineers could actually fix things without sending them back to the manufacturer.

You worked for only ONE station, and you could name the guy who owned it.

Radio stations used to have enough on-air talent to field a softball team every summer.

You know the difference between good reel-to-reel tape and cheap reel-to-reel tape.

Religious radio stations were locally owned, run by an old Protestant minister and his wife, never had more than 20 listeners at any given time, and still made money.

You have a white wax pencil, a razor blade, and a spool of 3M splicing tape in your desk drawer - - just in case.

You can post a record, run down the hall, go to the bathroom, and be back in 2:50 for the segue.

You knew exactly where to put the tone on the end of a carted song.

You only did "make-goods" if the client complained. Otherwise, who cares?

Somebody would say, "You have a face for radio", and it was still funny.

Sixty percent of your wardrobe has a station logo on it.

You always had a screwdriver in the studio so you could take a fouled-up cart apart at a moment's notice.

You would spend hours splicing and editing a parody tape until it was

�just right", but didn't give a damn how bad that commercial was you recorded. Hey, I can only work with what they give me, right?

You still refer to CDs as "records".

You played practical jokes on the air without fear of lawsuits.

You answer your home phone with the station call letters.

You knew how to change the ribbon on the teletype machine, but you hated to do it because "...that's the news guy's job."

You have several old air-check cassettes in a cardboard box in your closet that you wouldn't dream of letting anyone hear anymore, but, you'll never throw them out or tape over them. Never!

You can still see scars on your finger when you got cut using a razor blade and cleaned out the cut with head-cleaning alcohol and an extra long cotton swab on a wooden stick.

You still have dreams of a song running out and not being able to find the control room door.

People who ride in your car exclaim, "Why is your radio so loud?"

You remember when promotion men bought to new LP's to the station, among other things - and you played them the same day.

You have at least 19 pictures of you with famous people whom you haven't seen since, and wouldn't know you today if you bit 'em on the ass.

You wish you could have been on "Name That Tune" because you would have won a million bucks.

You even REMEMBER "Name That Tune".

You can still hit the beginning of a song on an album with the stylus, and slip cue that sucker while potting it up so the cue burn isn't so bad.

You know what slip cueing a record is.

You can thread up a reel to reel in two seconds flat.

You�re no longer stunned when you have to patiently explain that you don't have to record your voiceover on two tracks so it will be "stereo".

You remember when everybody turned on the radio, not the TV, to find out WHERE THE TORNADO IS.

You can remember when smoking in the air studio "WAS MANDATORY".

You have this exactly wrong. Envelope detectors are not sensitive to the phase of the carrier, responding instead to the square root of the sum of the squares of the I and Q components of the modulation:

SQRT(I^2 + Q^2)

(The carrier must be present in order to properly bias the envelope detector, but, upon demodulation, the carrier simply appears as a DC term.)

A synchronous detector will detect either the I channel or the Q channel (or some linear sum of the two) depending on the phase of the regenerated carrier. It can be configured to reject the Q channel entirely by ensuring that the regenerated carrier is precisely in-phase with the original carrier.

To detect single sideband, you need two synchronous detectors whose carrier inputs are in quadrature and whose IF inputs are also in quadrature. A single synchronous detector will _not_ detect single-sideband.

See any textbook on modulation theory.

I do not believe that this is correct. The modulation scheme of iBiquity's IBOC system is basically multiple carrier COFDM, and is quite similar to the modulation scheme used in Digital Radio Mondiale (DRM), which is known to be robust in the face of selective fading. It all depends on the symbol spacing used in the COFDM carriers. If the multipath period is shorter than the symbol spacing, then the various reflections will reinforce. Because there are multiple narrowband carriers in COFDM, the data rate on each carrier can be very low (allowing long symbol spacing), yet the presence of multiple carriers still allows the overall system to deliver a high data rate.

I can not PROOVE that FCC crimes are happening. Just as with ANY crime
(abduction, embezzlement, etc.) the overwhelming APPEARANCE of a crime
is enough to initiate an INVESTIGATION by the proper agency. If the
books show money missing from a business or government account- an
investigation is started. If a talk show host continually lies about
consumer products and at the same time- reaps in ad contracts for
those products or a subsidiary product- an investigation should be
made (interviewing insiders for instance) as to the INTENT of the
DECEPTIONS.

Keep the boycott alive!

Reuters
Clear Channel makes peace with antiwar billboards
Thursday July 15, 7:32 pm ET
By Gail Appleson

NEW YORK, July 15 (Reuters) - Clear Channel Communications (NYSE:CCU - News) made peace on Thursday with a public interest group that sued the media giant for breaking a contract over posting an antiwar billboard in Times Square during the Republican National Convention.

Clear Channel settled the suit by agreeing to give Project Billboard two different prime Times Square locations instead of just one. In return, the group will drop its plan for a bomb graphic that Clear Channel found distasteful.

Project Billboard, which had a $368,000 contract for a billboard on the Marriott Marquis Hotel, sued Clear Channel's Spectacolor unit on Monday after it refused to post the antiwar message. Clear Channel said Marriott prohibits political advertising on its billboard.

Under the deal, Project Billboard can run its original text "Democracy is best taught by example, not by war," on both billboards but will not use a drawing of a bomb with lighted fuse decorated in Stars and Stripes.

Instead, one of the locations, a wrap-around billboard on the Conde Nast building on 42nd Street, will picture a stylized peace dove. The other location, a vertical billboard on the W Hotel at 47th Street, will display constantly updated figures representing "the total cost of Iraq War."

"These two new prominent locations will showcase our messages in the busiest intersection in America," said Deborah Rappaport, a Project Billboard board member. "We are impressed with the options Spectacolor presented to us and appreciate their cooperation and flexibility."

During a court hearing on Wednesday, Clear Channel's lawyer said the company had concerns that the bomb image would offend New Yorkers who lived through the Sept. 11, 2001 attack on the World Trade Center.

The billboard with the dove will be displayed during August when the Republican National Convention meets in New York, and again from October through Nov. 2. The vertical billboard will be displayed for two days of the convention and during September and October.

"We are happy to help Project Billboard get their message to the more than 1.5 million people who pass through Times Square each day," said Paul Meyer, President and Chief Executive Officer of Clear Channel Outdoor.

Very true. If Air America were set up to influence an election it
would a horrible waste of money with the limited coverage. Let's also
understand that all affiliates don't carry all shows, so that further
dilutes the political influence they might have.

Rich

Nearly every radio stock is off in that time period, most by a higher
percentage than Clear Channel.

Check them. Even Viacom is off more than CCU.

Can anyone point me to an address where I can find old radio
commercials in MP3 format? I'm especially looking for beer
commercials, like the un-PC Hamm's "Land of Sky Blue Waters" entry.
Any help is greatly appreciated.
Jerry

Actually, Rich, I'm glad you brought this up again, since I wanted to comment on your
observations made a while ago.  I finally had my Sirius radio (and the car it was in)
far away from its local haunts (back-and-forth to work), as my son and I took a trip
to the Downington/West Chester area to see his new choice of University (yeah, I
know...too much information).  What I found was, more or less, the same issues you
have...on local roads, where tree coverage is thick and low, I'd get occasional
drop-outs.  It never was an issue on major thoroughfares, since brush and trees are
cleared higher and further away from the road.  And, since we'd been listening to the
same station for over 250 miles from our origin, I'll take the occasional drop-out
over having it gone entirely long before had it been conventional radio.

But on our way back, I was astounded to find that (as opposed to complete absence in the tunnels on the turnpike) I had coverage after travelling only half-way through the Squirrel Hill tunnels in Pittsburgh. Clearly Sirius must have a terrestrial repeater here, most likely on the downtown side of the tunnel, as I can't explain how this could be any other way, but I really hadn't expected that Sirius had gotten around to attending to Pittsburgh just yet. I know that this doesn't address the outlying areas such as where you are, but clearly the terrestrial links will be dealing quite adequately with this issue in metropolitan areas.

And thanks for explaining how Sirius' satellite use works. This also means that, were one of the birds to fail, they could probably continue operations relatively unaffected, although clearly more delicately balanced between operational use and keeping the birds in a position to do so.

I could have sworn that Sirius has NASCAR programming, too.  And (good God!) they're
also clearing that NRA travesty of truth, too.

OK. Listen to those "lies" and tell me which advertiser is running a schedule that might have resulted from the inaccurate opinions. Most major advertisers shy away from controversial talk. That's why you'll hear the Conservative Digest, Hooked on Phonics, Oreck Vacuum Cleaners and similar accounts. They're heavy network advertisers. I can't remember the last time I heard an oil company spot in a radio talk show.

There aren't even pharmacutical companies advertising the drugs
Limbaugh uses. Not only is he defending their use, he's contributing
significantly to their bottom line. Still, no ad budget for his show.
That sounds pretty unappreciative on the part of the companies.

Rich

That is a fair point, assuming it is true.  Checking...

Clear Channel:  down 22%
Viacom:  down 17%

I know this is difficult for republitards, so allow me to
explain.

That means Clear Channel is off more than Viacom.

That means that for every dollar Clear Channel has,
they lost 22 cents compared to 17 cents for Viacom.

Both are earning money, Viacom less per share, but it is
a larger company.

Other competitors of Clear Channel:
Citadel Broadcasting:  down 33% (losing money, much smaller
company)
Cumulus Media:  down 28% (earning money, much
smaller company)
Sinclair Broadcast:  down 32% (earning money, much smaller)
Journal Communication:  down 3% (earning money, much smaller)
Entercom:  down 29% (earning money, much smaller)
Emmis:  down 25% (no earnings, much smaller)
Hearst-Argyle:  down 14% (earning money, much smaller)
Saga:  down 10% (earning money, tiny company)

In conclusion, all radio appears to be down, but Clear
Channel is down comparatively more because it has more
assets, stations, and is a "diversified media company".

My guess is that they don't want to be seen as advocating *illegal*
use of their products by anyone, even as a "joke".

therefore the enire stock comparison is invalid as a measure of CCs radio
division performance.

to equate the removal of one show from six stations as a financial disaster
at least in this case would be insane.

VIA (Viacom A Shares) peaked at 46.98 in September of 2003, and are at 34.51 now. The current price is 27% below the 52 week peak. VIA.B (B shares) peaked at 46.95 and are at 34.75. If you average both classes on a shares outstanding weighted basis, you have 26% off.

CCU is 25% below the 52 week peak.  In other words, CCU is off less than VIA, based on share price. But, of course, since VIA has three times the number of shares, the money loss is much more on VIA.

> I know this is difficult for republitards, so allow me to
> explain.

It has nothing to do with politics, but, rather, with a slow year for radio revenues. All ad industry issues are suffering, each depending on the sector. Ad agencies are also off.
>
> That means Clear Channel is off more than Viacom.

And Viacom is not a pure radio company. That is why I used the term "even" to include some entertainment stocks that had significant radio involved to show that radio was down all over, even effecting non-core radio issues. .

The average radio company is down about 25%. Some a little more, some a little less. This has been widely commented in investment discussions, ranging from Morningstar.com to broadcast publications like www.insideradio.con and The Radio Business Report.

> That means that for every dollar Clear Channel has,
> they lost 22 cents compared to 17 cents for Viacom.

But Viacom has lost $19 billion in stock value, while CCU has lost less than $7 billion.

> Both are earning money, Viacom less per share, but it is
> a larger company.

How much a company earns per share is irrelevant. That depends on the number of shares you divide net income by, and is only relevant to one company. The key number is the price to earnings ratio. Lower is better. It means every dollar invested earns more money.

There is no EPS standard or stock price standard. General Dynamics at $108 a share is not a better quality stock than General Electric at $34.

Clear Channel has 614 million shares, and the market cap is $21 billion, and

its price to earnings ratio is 18.1
Viacom has 1.7 billion shares, and the market cap is $59 billion, and its P/E ratio is over 35.

Viacom is more overpriced, selling at a 35 to one ratio, vs. Clear's lower 18 to 1 ratio.

> Other competitors of Clear Channel:
> Citadel Broadcasting:  down 33% (losing money, much smaller
> company)
> Cumulus Media:  down 28% (earning money, much
> smaller company)
> Sinclair Broadcast:  down 32% (earning money, much smaller)
> Journal Communication:  down 3% (earning money, much smaller)

The stock only began trading 9 months ago. And it is off just about 11% from its peak, not 3%.

> Entercom:  down 29% (earning money, much smaller)
> Emmis:  down 25% (no earnings, much smaller)
> Hearst-Argyle:  down 14% (earning money, much smaller)

No radio in Hearst, I believe. Only 27 TV stations.

> Saga:  down 10% (earning money, tiny company)
>
> In conclusion, all radio appears to be down, but Clear
> Channel is down comparatively more because it has more
> assets, stations, and is a "diversified media company".

Univision, down 27%. Diversified media company.
SBSA off nearly 30%. Radio only.
Beasley off 26%. Radio only.
Entravision off 30% etc.

First, this has nothing at all to do with Howard Stern being off 6 stations.
Second, it has nothing to do with the politics of CCU or Viacom or anyone.

How sweet you are to the broadcast liars! Knowingly lying and
refusing to correct mis-information- is now called "in-accurate
opinions". In fact- ANYONE who has a history of lying about the facts-
has simply just been giving his or her SINCERE IN-ACCURATE PERSONAL
OPINION! ( I guess Clinton gave his sincere personal opinion when he

said "I didn't have sex with that woman!"

I think my previous quote from the FCC ought to end this whole "discussion".

"Knowingly falsifying the news or knowingly spreading falsehoods on the air IS A VIOLATION OF THE PUBLIC TRUST" The FCC will not take any action UNLESS it receives evidence of intent to fabricate from extrinsic sources (insiders with personal knowledge of such intent to deceive).

So get it straight! The FCC CAN take action against liars on the radio.

Amateur Radio Newsline=E2=84=A2 Report 1405 - July 16, 2004

Here's a brief message from Amateur Radio Newsline's Support Fund=20
Administrator Andy Jarema, N6TCQ:

"The following is an advisory.  This is Andy Jarema, N6TCQ, Newsline=20

Support Fund Administrator. =20
We'd like to thank everyone who helped us during our campaign in=20
June, and we'll have the on-air=20
thank-yous in the next week or so.  Don't forget that the Young Ham=20
of the Year Award is coming=20
up in the next few weeks, so try to note our support address at the=20
end of the newscast, as we're=20
not out of the woods, yet.

And now, as every week, the latest breaking news of Amateur Radio=20
follows"

Amateur Radio Newsline report number 1405 with a release date of=20
Friday, July 16, 2004 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T. =20

The ARRL board of directors discuss BPL and other hot issues, it's=20
still a go with ECHO and a=20
satellite TV company makes a costly move.  The details are coming up=20
on Amateur Radio Newsline=20
report number 1405 coming your way right now.

**

BPL AMONG HOT TOPICS FOR JULY ARRL BOARD SESSION

The American Radio Relay League's board of directors sits down for a=20
weekend of critical meetings.=20
Amateur Radio Newsline's Mark Abramowicz NT3V has the preview...

--

Broadband Over Powerline internet access is one of the hottest=20
topics on the ARRL board agenda.=20
It is likely BPL has been the subject of committee meetings leading=20
up to the weekend board sessions.

Dealing with BPL issues is priority No. 1 for ARRL President Jim=20
Haynie WB5JBP.  Haynie tells Amateur=20
Radio Newsline in a recent interview, he expects the Federal=20
Communications Commission will act soon=20
on the matter. While it's difficult to put a timetable on how soon,=20

Haynie tells us he wouldn't be=20
surprised to see the panel come out with a decision before the=20
presidential election.

President Bush is solidly behind BPL as part of his broadband-technology initiative - this despite=20
Haynie and the ARRL's plea for him to reconsider. Democratic=20
challenger John Kerry's campaign=20
position speaks of a variety of technologies for broadband but does=20
not directly mention BPL.

Haynie concedes the way the political winds are blowing, some form=20
of BPL activity is likely to=20
be approved.

But the 64-thousand-dollar questions are: How much and where?

With the National Telecommunications and Information Administration=20
already raising red flags about=20
interference, and a BPL industry spokesman throwing verbal missiles=20
at the amateur community, Haynie=20
tells us here at Amateur Radio Newsline he's hoping some FCC=20
commissioners might re-examine their=20
BPL positions.

Haynie calls the recent suspension of the Alliant Energy BPL project=20
in Cedar Rapids, Iowa, an=20
important step. And, Haynie says, he suspects the electric utility=20
industry will have to consider=20
any fallout and who could be next to answer an interference=20
complaint at the FCC.

As to complaints, Haynie says the ARRL will be especially vigilant=20
if BPL becomes a reality. He says=20
the organization will be before the FCC to press interference issues=20
with those who are cause them.

And, he has told Amateur Radio Newsline, he will also press the FCC=20
to fully empower those charged=20
with enforcement issues in the agency to go after BPL providers who=20
fail to resolve any interference=20
complaints.

Among the other items on the board agenda, the status of amateur=20
license restructuring which includes=20

provisions for a "no-code" HF license for entry-level hams.

The July board meeting also is where the announcement of the winner=20
of the Hiram Percy Maxim award=20
comes along with host of other ARRL awards.
=20
For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in=20
Philadelphia.

--

Check next week's Newsline for a report on the ARRL board happenings.

(ARRL, NT3V)

**

HAMSATS:  ECHO TESTS CONTINUE

Testing of the newest ham radio satellite, ECHO, continues and all=20
is,  as they say in the space biz=E2=80=A6=20
nominal.  The remainder of this week is expected to be spent loading=20
some new code, testing the S=20
downlink and the UHF B transmitter.  Note that the S downlink, when=20
in digital mode, will always be=20
at 38.4 kilobits or higher.  It is not capable of 9.6 kilobits due=20
to limitations involved in making=20
it work properly at speeds up to 76.8 kilobits.  AMSAT is pleased so=20
far with the strength of the=20
2.45W S downlink.  At times the UHF A transmitter will be off or at=20
very low power. They will also=20
be testing transmitters at higher data rates.  Listeners should not=20
be surprised or alarmed if the=20
UHF A transmitter is not on or if they are unable to copy it at 9.6k=20
during some orbits.

The Command Team is carefully checking off the tests and=20
measurements that are part of the commissioning=20
process.  They ask everyone to be patient.  And again, AO-51 is not=20
yet open for use.  Any transmissions=20
aimed at AO-51 by other than command stations will slow down the=20
process and delay the day when it is=20
open for all to use.

The coloradosatellite.com/echo web site was off line for a few hours=20
last weekend due to a data center=20
move.  Stations who want to  upload telemetry should find it on line=20
now.

(WD0E, AMSAT)

**

## SPACE: ARISS SCHOOL CONTACT LIST UPDATED

While we're on the subject of ham radio in space, the list of=20
Amateur Radio on the International=20
Space Station, or ARISS, school contacts has been updated.  To check=20
if a school in your area is on=20
the list or to find out how to schedule a contact at your school=20
please visit www.amsat.org or=20
http://ariss.gsfc.nasa.gov.  There is no "www" in that last URL.  Of=20
course, these addresses will=20
be in the print edition of this week's Amateur Radio Newsline report.

(ARISS)
=20
**
Break 1

>From the United States of America, We are the Amateur Radio=20
Newsline, heard on bulletin stations=20
around the world including the Los Angeles Unified School Amateur=20
Radio Association Network serving=20
the students in Los Angeles, California.

(5 sec pause here)

**

## RADIO LAW:  MDS & ITFS SPECTRUM RECHANNELIZED - MDS BECOMES BRS

Big changes are coming to the Multipoint Distribution Service and=20
the Instructional Television Fixed=20
Service.  These are better known by the acronyms M-D-S and I-T-F-S.

As part of its ongoing effort to promote the deployment of wireless=20
broadband services, the FCC has=20
adopted a Report and Order and Further Notice of Proposed Rulemaking=20
dramatically changing the rules=20
governing MDS and ITFS operations in the 2500-2690 MHz band. =20

For starters, the Order renames the M-D-S service the Broadband=20
Radio Service or B-R-S.  It does=20
however maintain the I-T-F-S label for Instructional Television=20
Fixed Service licenses and operations.=20
The newly rechannelized I-T-F-S slash B-R-S band will group high and=20
low power operations together=20
in spectrum chunks.  This, the agency says, will make low power two-way data communications possible=20
in some parts of the band. =20

Finally, to make all this happen the band will soon become 5 MHz=20
larger.  This, as restructuring of=20
other services in the adjacent electromagnetic spectrum permits the=20
FCC to extend the low end of=20
this band down to 2495 Mhz. (CGC)

**

## RADIO LAW:  FCC CLARIFIES ITS ROLE REGARDING INTERFERENCE AND=20 CUSTOMER EQUIPMENT

The FCC has clarified its role regarding interference issues,=20
consumer antennas and Part 15 unlicensed=20
equipment.  Regarding antennas, we all know that consumers have the=20
right to install and operate -=20
on property they control - antennas for over-the-air broadcast,=20
terrestrial and satellite reception.  =20
Now the regulatory agency has added license-free Wi-Fi antennas of=20
one meter or less to the list of=20
what may be installed.  The same one meter size limit also applies=20
to antennas used in conjunction=20
with fixed wireless services that are licensed by the FCC.

In the area of radio frequency interference or R-F-I, the FCC says=20
that it and it alone holds exclusive=20
jurisdiction over the regulation and resolution of R-F-I issues.  It=20
adds that regulation of R-F-I=20
phenomena shall be imposed only by the Commission noting that both=20
the FCC and the federal courts=20
have overturned attempts by third parties to regulate RFI matters. =20

This, in light of the FCC's=20
exclusive authority in this area.

To read more go to: =20
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1844A1.doc =20
(CGC)

**

ENFORCEMENT:  CATV LEAK RESULTS IN $6400 FINE

A cable TV system in Cornersville, Tennessee has been fined for=20
excessive signal leakage in the=20
aircraft communications band.  Small Town Communications Partners=20
has been ordered to pay $6,400=20
for excessive leakage on 121.2625 MHz.

At that frequency a maximum leakage of 20 microvolts per meter at a=20
distance of at least three=20
meters from a CATV cable is allowed.  The FCC says that the measured=20
leaks in this case ranged=20
from 255 microvolts per meter to 2080 microvolts per meter. =20

The Commission notes that excessive cable TV leakage can interfere=20
with a wide variety of communications. =20
This can include emergency services, aviation, and Amateur Radio.

More is on-line at=20
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1751A1.doc =20
(CGC)

**

ENFORCEMENT:  DIREC-TV FINED FOR UNAUTHORIZED SATELLITE MOVE

The Commission has proposed an $87,500 fine against DIRECTV, Inc. =20
This for repositioning its=20
DIRECTV 3 satellite without FCC authorization.

DIRECTV had filed a request with the FCC for special temporary=20
authority to relocate the DIRECTV 3=20
bird, but admits that its employees began repositioning the=20

satellite the next day, without waiting=20
for Commission approval.=20

In setting the amount of the fine, the FCC noted that strict=20
adherence to the rules governing=20
modification of satellite authorizations is critical to minimizing=20
the risk of collisions between=20
satellites. (CGC)

**

FCC INTRODUCES NEW EXHIBIT ON HISTORY OF THE INTERNET

The FCC has introduced the third in a series of exhibits on the=20
history of various communications=20
technologies. The latest presentation focuses on the history of the=20
Internet, including the=20
communication technologies used to access the World Wide Web.  More=20
is on line at=20
www.fcc.gov/omd/history  (CGC)

**

ON THE AIR:  THE .275 YOUTH GROUP NET

Timothy Little, W-8-L-B-O has announced the start-up of a new 40=20
meter 275 Youth Group. =20
According to his posting on the Q-R-Zed dot com super site, this is=20
an informal ragchew group=20
that meets every Saturday at 9:00 P.M. Eastern time on 7 point 275=20
MHz, +/- 10 KHz.=20

Little says that the main purpose of the net is to promote the use=20
of HF by younger hams so that=20
they can get to know one another.  The net also tries to help them=20
perfect their operating skills=20
including Morse code operation and D-Xing. =20

Anyone young or young at heart is invited to take part.  More=20
information about this net is on=20
line at www.275youthgroup.4t.com  )QRZ.com)

**

## THE SOCIAL SCENE: NORTHERN ALABAMA DX BANQUET=20

The North Alabama DX Club has announced that its annual DX Banquet=20
will be held in conjunction=20
with this year's Huntsville, Alabama hamfest on August 21st.  The=20
guest speaker will be Jess=20
Lewis, K-R-4-O-J, from the T-33-C 2004 Banaba Island DXpedition.=20
Tickets are $25 each and available=20
from the NADXC in care of Vic Holland, 219 Cedar Pond Drive,=20
Madison, Alabama 35757-7633. For=20
additional information phone 256-721-9106 or E-mail k4rvh@arrl.net. =20
(E-Mail)

**

## BREAK 2

This is ham radio news for today's radio amateur.  From the United=20
States of America, We are the=20
Amateur Radio Newsline with links to the world from our only=20
official website at www.arnewsline.
org and being relayed by the volunteer services of the following=20
radio amateur:

(5 sec pause here)

**

## CHANGING OF THE GUARD:  ASCII DEVELOPER NOW S.K.

Bob Bemer, a computer pioneer who published warnings of the Y2K=20
problem in the early 1970s and=20
helped invent a widely used coding system, has died.  This,=20
following a battle with cancer.
  =20
While not a radio amateur, Bemer played a major role in how the=20
world's computers operate and,=20
indirectly, in how hams communicate today. He began his career in=20
1949 working at companies including=20
Rand, IBM, and Honeywell.  He also helped develop the ASCII coding=20
system that is used to represent=20
letters, numbers and other characters in the data world.  He also=20

contributed the escape key and the=20
backslash to the computer language.=20

Bemer first published warnings of the Y2K computer problem in 1971=20
and again in 1979.  He also made=20
several public appearances to discuss the issue in the years leading=20
up to the millennium.

Bob Bemer died Tuesday, June 22nd at his home some 120 miles west of=20
Dallas, Texas.  He was 84.  (Published news reports)

**

### EMERGING TECHNOLOGY:  FEW KNOW ABOUT DIGITAL TV

The General Accounting Office says that more than 80 percent of=20
Americans are either unaware or only=20
"somewhat aware" of the transition to digital television signals.  =20
But federal officials have=20
expressed shock and indignation at the survey results.=20

Congress plans to sell the analog spectrum that will become=20
available when TV stations convert from=20
analog to digital. Lawmakers are counting on the money to help=20
balance the budget.  However, the=20
digital transition may be years away unless more consumers start=20
buying digital TV sets and most=20
are not willing to pay the additional cost.  (TechBriefs)

**

### EMERGING TECHNOLOGY:  CELL PHONE "WAITING LOT" IN OPERATION AT=20 LINDBERGH FIELD

Following the lead of several other busy airports around the nation,=20
officials at San Diego's=20
Lindbergh Field have opened a convenient "cell phone waiting lot." =20
This is a place where drivers=20
can park for up to an hour while awaiting phone calls from arriving=20
passengers.  Airport managers=20
hope that the new lot will cut down on the congestion caused by=20
vehicles circling the airport loop,=20
waiting to pick up passengers. More is on-line at=20
http://tinyurl.com/yplws  (CGC)

**

## ON THE AIR:  6 METERS ACROSS THE ATLANTIC POND

It's looking like it could be a big DX season for hams and SWLs on=20
both sides of the Atlantic. =20
GB2RS reports that during a Sporadic E opening on June 19th a path=20
opened from Europe to North=20
America.  The Maximum Usable Frequency rose at least as high as the=20
FM broadcast band.  A North=20
American station was received on and recorded at 88.5 MHz between=20
13:10 and 13:30 UTC.  During=20
the event, trans-Atlantic television carriers were also received on=20
55.25, 61.25, 67.25 and=20
83.25 Mhz.  (VHF reflector)

**

## 50 & ABOVE:  144 MHZ QSO DATA WANTED

If you've made any long distance 2-meter contacts in excess of 1,600=20
miles, or 2,600 kilometers,=20
Volker, DF5AI wants to know the details of your contacts.  He's=20
interested in the frequency, the=20
UTC time & date, and particularly the grid square locator.  He's=20
also quite intrigued in double-hop=20
sporadic E skip.  He can be contacted via his website.  It's in=20
cyberspace at www.df5ai.net  (VHF Reflector)

**

## WORLDBEAT - ISRAEL:  NEW SIX METER BEACON IN ISRAEL

4X4SIX is the new 6 meter Israeli beacon operating on 50.080 MHz. =20
4X6ON and 4Z5AY built the=20
station which announces its call sign on CW around the clock.  The=20
beacon is located in grid=20
square KM72JB running 5 watts out to a J-Pole antenna.  (Hagal)

**

DX

In D-X, the Ohio Penn D-X Newsletter reports that DL3PS and VE3ZIK=20
will be active on 40-6 meters=20
from Bilice, Croatia through July 31st.  The call signs being used=20
are 9A slash VE3ZIK and 9A slash=20
DL3PS.  While VE3ZIK is one of the Web Administrators for the=20
www.contesting.com info website, there=20
will be no QSL information there until August 3rd.=20

Meantime word that D-H-9-Y-A-T will be active portable CU7 from the=20
Azores.  Listen for him from=20
August 3rd to the 20th.  Activity will be on 40, 20 and 15 meters=20
QRP on CW.  QSL this operation=20
via the bureau.  (Various DX sources)

**

THAT FINAL ITEM: MUSEUM SHIPS CASTING FOR CONTACTS

And finally this week, dozens of ships from around the world=20
get "radio-active" July 17th and 18th=20
for the annual Museum Ships Weekend Event. Amateur Radio Newsline's=20
Mark Abramowicz, NT3V is back=20
with us and he checks in on preparations being made about the U.S.S.=20
New Jersey....

--

Dave Burgess, WA2TVS, is chief engineer for the Battleship New=20
Jersey Amateur Radio Station aboard=20
the New Jersey. Look for NJ2BB (New Jersey 2 Big Battleship) to be=20
very active during the event.

Burgess says the weekend was the brainchild of the USS Salem Radio=20
Club, K1USN, in Salem, Mass.=20
He says it actually started in 1997 as a way to get museum ships at=20
dry-docks around the world to=20
get on the air by way of amateur radio.

Burgess says it's the New Jersey's third year taking part.

"Last year, the number grew to about 87 or 88," Burgess says. "Right=20
now I think the pre-registration=20
right now is about 77. But seems like there's always a half a dozen=20
or so right at the last minute=20
that get their act together and get on the air."

Burgess says the event gives radio operators around the world a=20
chance to contact a variety of these=20
special ships and their volunteer crews.

"One is just to have fun and a reason to get the ships on the air,"=20
Burgess says. "Of course, whoever=20
is in charge of taking care of the ship gets some PR out of it, we=20
hope.

"They have an opportunity for the public to see amateur radio which=20
is new to a lot of people. But to=20
advertise the ships worldwide. I never knew there were so many ships=20
out there. Just museum ships that=20
is. It's amazing how many there are out there and what their=20
diversity is."

Burgess says there are tugboats, river boats, submarines and even a=20
midget German submarine left over=20
from World War II. All are part of the museum ship flotilla.

He says there's no contest exchange involved in this one. Ship=20
operators get on the air and look to=20
contact land-based stations as well as other museum ships. It's a=20
chance, Burgess says, to showcase=20
a ship and its history. And, of course, there's an exchange of QSL=20
cards and you can be guaranteed=20
some pretty impressive history and photos of the ship you contact.

For the New Jersey's part, Burgess says he's planning an active=20
weekend with operations through the=20
evening of July 18th.
=20
"We'll be on all HF bands, probably concentrating on 20 (meters),=20
but we have capabilities (with the)=20
ship's antennas to do 160 through 10 meters," Burgess says. "We'll=20
be on all modes.  This year we'll=20
be introducing true, green-key operation for teletype. We'll be=20
using the ship's old mechanical teletype=20
machines to get on the air."

Look for NJ2BB, Burgess says, for a memorable QSO and QSL.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in=20
Camden, New Jersey, the home of the=20
Battleship New Jersey.

--

Thanks Mark.  This sounds like a great opportunity to collect some=20
very interesting "wall paper" for=20
the ol' shack.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ=20
Magazine, the FCC, the Ohio Penn=20
DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-
News, that's all from the Amateur=20
Radio Newsline(tm).  Our e-mail address is newsline=20

-------------------------------
Ohh, that's even worse.  "Bomb"ing your own era?  I'da loved to have
grown up when you did, pal.  At least you HAD real music back then
where talent actually SANG.  Today one doesn't even have to sing, play
an instrument(computer does that for you) or know how to read
music(which I don't but I'm no performer) to hit the top 10.  Today's
scene is about as creative as a toiletseat compared to 30, 40, 50
years ago.

I can just hear the ad now, in Rush's pompous stentorian tones:

"Ask your doctor about Oxy-contin.  Then ask your maid..."

Then my bet is the local affiliate is running news network inventory
in Air America's shows in the local positions.

Air America doesn't have the critical mass necessary to command a buy
from a company like Shell. In addition, a liberal slant isn't
something a giant oil corporation generally seeks.

The last time something like this surfaced it turned out that WLIB was airing a schedule and it either was carried by Air America or the complainants were listening to WLIB's, not the network's spots.

Shell's CEO (much to the distress of the other world oil concerns) recently made a
statement that the world needs to get off of the carbon (e.g. oil and other fossil
fuels) economy, and fast!  This, to my mind, makes them far more progressive than
anyone else out there (although BP is making some noise that might indicate
they're
moving into other energy markets, as well).

So speaking to other progressives on outlets like Air America isn't so big a
surprise....they may even want to hear more about what Shell has to say.

"misterfact" <misterfact@yahoo.com> wrote in message
news:cdfd67$b8d$1@xuxa.iecc.com...
"Knowingly falsifying the news or knowingly spreading falsehoods on

> the air IS A VIOLATION OF THE PUBLIC TRUST" The FCC will not take any action UNLESS it receives evidence of intent to fabricate from extrinsic sources (insiders with personal knowledge of such intent to deceive).

I'd take this so-called "quote from the FCC" more seriously if your could document the source, i.e., CITE an reference document rather that identifying it as a "quote from the FCC."  A real "quote from the FCC" has to be one that can be found exactly in the words in which you present it here in a FCC document from which it's been taken word-for-word.  Anything else is, at best, a paraphrase and is not likely to be totally accurate.

For one thing, the language is very unlike that of the FCC.  I doubt if the FCC in any official document ever used the terminology "knowingly spreading falsehoods" or "insiders."  You're free to prove me wrong, but you won't have done that unless you provide citations directly to FCC documents.

Your thesis has been so well shot down by so many knowledgeable people in this group that you'd be well-advised to give up on it.  Several people here who have extensive knowledge of broadcast law have scorned your take on the matter of lying.  They've been justified in doing that.  It might be best that you quit while you're behind.

>
> So get it straight! The FCC CAN take action against liars on the radio.

As a _general_ thesis, the above statement, is simply ludicrous.  It is far,

far, far too broad.  How many times to you have to be told.  Give it up.

Interesting, but irrelevant.  The relevant period to compare
is the last 6 months.  It was 6 months ago that Clear Channel
fired Howard, not a year ago.

I clipped the rest since it either followed along the same
irrelevant path or because I covered P/E ratios in my
response to Tim.

It is about politics, democracy, and freedom.  Clear Channel
is the same station that issued a banned-song list after

9/11, stopped playing Dixie Chicks after they criticized
Bush/Cheney, and issued another banned song list after
the Superbowl indecency erectile disfunction.

Except that they have the lowest P/E ratio of the group.
A P/E ratio is an indicator of optimism about future
prospects for a company.  The higher the ratio, the more
investors expect them to do well.

So Clear Channel must be in some other businesses, right?
They have a near monopoly on concert/event promotions,
so that should not be a problem.

The other industry Clear Channel is invested in has
been up more than the radio industry.  Compare Lamar and Obie.
Both are outdoor/billboard, which is Clear Channel's

other major business and works in synergy with their event
promotion business.  In fact, Lamar and Obie are both
smaller and losing money.  Both are up over the last
6 months.  What does that tell you?

It tells me that you are a republitard.

And that Howard and his listeners are beating the F
out of Clear Channel.

> to equate the removal of one show from six stations as a
> financial disaster at least in this case would be insane.

I am not equating it with financial disaster.  That is the
exagerated non-sequitur you created.  My argument is simply
that dumping Howard had a negative impact on profitability.
That, as a business decision, they were better off with
Howard than without.  The stations they dropped him from are
experiencing lower ratings (smaller audiences), which leads
to both less  advertising and lower ad rates (smaller profit
margins). Add to that a boycott of Clear Channel stations,
products, and advertisers, and you have a more wide spread
impact than just the 6 markets.

These are the lies that won't go away.  Clear Channel never issued a
"banned" song list and never stopped playing the Dixie Chicks.

pretty much nothing that has to do with radio

>
> It tells me that you are a republitard.
>

one of the advertising fallacies: if you cant make a valid point call
someone names

> And that Howard and his listeners are beating the F
> out of Clear Channel.
>

just my opinion but stale programming and almost 100% automation are doing a
better job of driving listeners away then any amount of fan action could
achieve

> > to equate the removal of one show from six stations as a
> > financial disaster at least in this case would be insane.
>

probably so but improvable unless you are privy to their accounting records.

> That, as a business decision, they were better off with
> Howard than without.

faced with huge fines id say it was more of a no brainer. they can always
put him back on when the political climate eases up.

The stations they dropped him from are
> experiencing lower ratings (smaller audiences), which leads
> to both less advertising and lower ad rates (smaller profit
> margins).

its normal that when a programming changes that the ratings initially drop.

Add to that a boycott of Clear Channel stations,
> products, and advertisers, and you have a more wide spread
> impact than just the 6 markets.
>

stations love boycots. they have almost zero effect other then to generate
free media attention.

Ohh, that's even worse.  "Bomb"ing your own era?  I'da loved to have
grown up when you did, pal.  At least you HAD real music back then
where talent actually SANG.  Today one doesn't even have to sing, play
an instrument(computer does that for you) or know how to read
music(which I don't but I'm no performer) to hit the top 10.  Today's
scene is about as creative as a toiletseat compared to 30, 40, 50
years ago.

>It tells me that you are a republitard.<

Gee, what a brilliant statement.  When someone actually cites facts and punches
holes in your argument, call him names and hide behind an alias and a fake
e-mail address.  You planning on growing up anytime soon?

>Howard and his listeners are beating the F out of Clear Channel.<

Proof?

>My argument is simply that dumping Howard had a negative impact on
profitability.<

Proof?

>The stations they dropped him from are experiencing lower ratings...<

Proof?

This has noting to do with the morning shows on 6 stations our of 1200, no matter how you want to position it.

Clear Channel stock has very closely treacked the sector, with no indication that anyone gives a hoot about Howard on wall Street.

Wrong. Several PDs, on thier own, made lists of songs tht might be sensitive, especially if played near news reports or commentary about 9/11. It was an example of self-discipline, not censorship. No song was banned.

> stopped playing Dixie Chicks after they criticized
> Bush/Cheney,

Actually, many non-Clear Channel stations did this before Clear Channel ones did. Nearly every country station in America reacted to listener outrage about the Maynes comments and yanked the songs. The first were owned by Cumulus, in fact.

> and issued another banned song list after
> the Superbowl indecency erectile disfunction.

No such thing. Urban legend, like the other two.

>> So Clear Channel must be in some other businesses, right?
>> They have a near monopoly on concert/event promotions,
>> so that should not be a problem.
>>
> it is if you are using those numbers to allege an impact on
> the absence of one radio show

They are making money there and in the following:

>> The other industry Clear Channel is invested in has
>> been up more than the radio industry.  Compare Lamar and
>> Obie. Both are outdoor/billboard, which is Clear Channel's
>> other major business and works in synergy with their event
>> promotion business.  In fact, Lamar and Obie are both
>> smaller and losing money.  Both are up over the last
>> 6 months.  What does that tell you?
>
> pretty much nothing that has to do with radio

Precisely.  In other words, and I will write this as
slowly as possible for the republitards out there.

Their other lines of business are successful.  Those
other businesses have been up in the stock market for
companies that operate only in that line of business.
Therefore, even though they are not down as much on
the surface, they actually have to be down much more
in the radio business to adjust for the amount the
other businesses are up.

>> It tells me that you are a republitard.
>>
> one of the advertising fallacies: if you cant make a valid
> point call someone names

Blame it on the republicans that trained me to
serve as an example of morality, integrity, and
accountability.

That has been true since 1997 or 1998.

>> I am not equating it with financial disaster.  That is the
>> exagerated non-sequitur you created.  My argument is
>> simply that dumping Howard had a negative impact on
>> profitability.
>
> probably so but improvable unless you are privy to their
> accounting records.

They are a public corporation.  If it were earlier in the
day, I might go dig up some annual reports and look to
see if it breaks down by industry.

>> That, as a business decision, they were better off with
>> Howard than without.
>
> faced with huge fines id say it was more of a no brainer.
> they can always put him back on when the political climate
> eases up.

That is the error.  They are 1 of the actual sources of
the climate of censorship.  The owners are personal friends
of Bush.  The fine they paid was pure publicity, probably
taken directly from their advertising/PR budget.

>   The stations they dropped him from are
>> experiencing lower ratings (smaller audiences), which
>> leads to both less  advertising and lower ad rates

```
>> (smaller profit margins).
>
> its normal that when a programming changes that the ratings
> initially drop.

Excuses, excuses.  Write them on your Clear Channel job
application.

>  Add to that a boycott of Clear Channel stations,
>> products, and advertisers, and you have a more wide spread
>> impact than just the 6 markets.
>>
> stations love boycots. they have almost zero effect other
> then to generate free media attention.

Are you even giving what you write half a thought?  If that
is the case, it would have made even more sense to keep
Howard.  Free media attention and no initial drops.
We are talking about a company that has consistently
censored anything anti-Bush.

A low PE ratio is the best. It indicates that the price per share divided by the earnings per share yields a smaller number. A low EPS indicates that the share price is supported by real earnings of substance.

Your definition is wrong. P/E is a measure of past performance, not of attitude.

>

None whatsoever.The billings on 6 stations in morning drive are not even a grain of sand on a beach to CCU.

> That, as a business decision, they were better off with

Again, 6 stations in one daypart.

> Add to that a boycott of Clear Channel stations,
> products, and advertisers, and you have a more wide spread

There is no such boycott.

I've got a "portable" Audiovox Sirius radio receiver.  I installed it in the car and it works fine.  I also have the "home kit", which uses a small "indoor/outdoor" antenna.  Unfortunately my stereo is on my northern wall and the wire is not long enough to go outside and run to the corner to get a southwest exposure.  I've tried the antenna sitting inside the window pointed north, up about 45 degrees, which seems best but is still not good enough for consistent signal (it cuts in and out).  I moved it outside the window and it's pretty much the same.

I'm wondering a couple of things -- is there any way to add an extension onto this antenna wire?  I haven't seen one.

Can I buy another magenetic car antenna and stick it to the house gutter and would this work any better?   Other solutions?

Also, I can't seem to get as good of reception now as I got when I started messing with it and am wondering if I pinched the wire too much when I ran it out through my "crank window" to get it outside.  I now get very little signal no matter what, with strong ugly "brrrrp" noises coming about 2-3 second intervals.  Is the antenna wire highly sensitive to being pinched and would this be a possible result if it were?

Thanks in advance,

Terry

Censorship is done by the government. When a company in the private sector makes decisions on what or what not to play, it's called first amendment rights.

Censorship would be the government telling a cable news channel that they cannot use a particular slogan.

That's exactly what my parents said 30 years ago, though.

I'll say that top-40 is far more homogenized than it was when I was a kid. It used to be there were a wide variety of different musical styles all on the same chart, but now things are much more uniform.  I think that's bad, and I think it bores listeners as well.

BUT, I don't think anyone can claim that "Yummy, Yummy, Yummy, I've Got Love In My Tummy" is any better than the worst song on the charts today.

It stands for IN BAND ON CHANNEL, although really it should be called
IN BAND BETWEEN CHANNELS.

PHONY??? Give me a break! It's common info that he does ALL the guest
voices. Phil has even admitted this ON THE AIR many times.The "Callers" are
VERY real....frightening real, some are very stupid.
All the voices are done by mouth and the use of a telephone mouthpiece. No
synthesizer is used.
The TRUELY amazing part is the dumb-shits that fall for this act. Most of
them would rank as true "Winners/Dolts/Dimwits" or just plain stupid. Some
of the responses are just funny as shit.

DRM will actually *reduce* the number of channels available. Unless someone can bankroll the instant wholesale replacement of analog equipment (both transmitters **and receivers**) with DRM digital. Because unlike IBOC, DRM cannot operate on the same frequency as the associated analog broadcast.

I don't see any indication on http://www.drm.org that DRM supports stereo. Not a big deal on AM but probably a dealbreaker for FM. DRM really was never intended for VHF/UHF use.

If there's spare spectrum at UHF for digital broadcasts, then Eureka 147 is the way to go. The standard was specifically chosen for VHF/UHF use and is (at least technically) proven in many countries.

(please do not take the above post as an endorsement of IBOC. IMHO it will deprive millions of Americans of their sole nighttime AM service, while providing an inferior digital service, justifiable for only political reasons. We should be joining the rest of the world in implementing Eureka at UHF.)

This is unfortunately true, and it's also one of the more important sources
of lousy sound for AM broadcasters.  Low group delay across the antenna system
really _is_ important for good clean analogue audio.

>IBOC splatter was certainly not taken into consideration in
>the design of nearly, if not all, of the phasors in use today.

IBOC now requires low group delay across an even wider frequency range.  My
hope personally is that stations will be forced to upgrade their phasing
networks and antenna systems in order to implement IBOC-AM, which will then
fail, leaving them with wider band antenna systems that result in higher
analogue audio quality.

The KTNQ phaser and ATUs were carefully, and at great cost, redesigned for
IBOC.

Your observation is correct for most stations, however.

And that was in the general area that rendered RKO lacking the character
qualifications to hold a license. In other words, "fitness." Add the General
Tire dealings in Libya and Argentina, and you got the required divestiture
of the remaining RKO properties.

This is the case for IBOC-AM.  Skywave is pretty much what makes AM
useful and unique, and I think without it there is really no purpose to
the AM band any more.  But we'll see.

For IBOC-FM, of course, there is no skywave issue but there may still
be adjacent channel interference issues.

> DRM is, in my opinion, the way to go, despite the fact the audio

I agree, but it requires seperate channels.  Likewise, I think the Eureka
stuff probably beats out FM-IBOC but we can't get the bandwidth for it.

> I don't see why we can't have DRM on a portion of the AM band and

The reason is because the public interest is no longer considered by
the FCC.  The whole notion of radio serving the public went out with
the Reagan administration.  There is no more public service, no more
Fairness Doctrine, no more enforcement of technical standards let alone
programming standards.

Is the provisional Iragi governement broadcasting on Shortwave at all?

Is the SW service...or any domestic service (in English) available streaming online anywhere?

Thanks!

However IIRC there was never allegation that the management of RKO General had any participation in, or even knowledge of, the wrongdoing of the corporate parent, nor was that wrongdoing in any way related to broadcasting.

I sort of recall revocations quite a number of years ago of all the licenses
held by a guy named Don Burdon (Star Broadcasting?).  Anyway, one of his
stations was in Omaha (KOIL) and he had several others.  Anybody remember
what that was about?  Rigging contests, maybe?   Thanks.

But as David Eduardo has pointed out, skywave is no longer a factor in calculating
a
station's reach.  So under the circumstances, your suggestion is quite the case.
The
fact that skywave propagation also makes an adjacent station's local coverage
unusable is a bigger concern.  At that point, not only is the AM band of
questionable
value, it's actually a complete waste with IBOC.

Callers often include a righteous policeman whenever the "guest" is advocating something shady. I used to think the cops had a "sixth sense" about perps -- maybe not. BTW, I never heard a woman officer call.

Okay, okay, so "fitness" relates to a number of qualities.  I get you there.  What
I
was differentiating, though, was how a licensee could be "unfit" simply by airing
content not considered conventional or even valid....the other misfeasances,
criminal
and otherwise, can certainly make a licensee unfit, but there are bigger issues
```

with those failures than simply giving a soapbox for goofs. Long ago (late 60s? Certainly early 70s) the FCC made it abundantly clear (in the course of a station sale and license transfer) that they would have no opinion on an expected format change with the news owners (I think the station was classical, and its loss was considered by its audience to be unacceptable).

Frankly, I still don't see what's so wrong with requiring a licensee to accomodate a community's needs (after all, aside from that little condition, the station is free to make as much money with the license as it can) but this clearly will never happen here so long as the First Amendment is considered to encompass in toto the operation of a broadcast outlet. It's free speech we're guaranteed, and until broadcasters give out airtime for free, that's not free speech.

WIFE-1310, Indianapolis, KBTR-710, Denver and KISN-910, Portland (Vancouver,
WA), OR. Plus KOIL-1290

He engaged in ex parte negotiations with a member of Congress. In simpler
terms, he gave a bribe. Unfit as a licensee, licenses revoked.

Had no idea it was a common fact.
I listened to Hendrie a total of 2 nights for about 15 minutes, and as
I've done studio work in radio, I'm sensitive to voicing and phrasing and
could tell right away what was up. Have a different perspective now
that you've (albeit hot-headedly) told me... Interesting...

As you can imagine from 30 minutes in the car, I thought I simply
"discovered it" and thought, "Just another jackass on the radio...";
OTOH, if that's his entire shtick, I can't be too far from right. Anyway,
try decaf next time.

I don't think people who are tricked into deceit are "stupid", anymore
than I fault a spouse who's other half runs around on them. Deceit IS the
entire point of the show--so how can you blame people for falling into it?

The proof was sent to the FCC. They have done nothing about it.
First proove to us that you are an expert at analizing chemical data.
Second- you appear to be disputing the FACT that styrofoam is not
bio-degradeable. This leads me to believe that you are unqualified to
accept chemical facts when they stare you in the face. You also appear
to be disputing the FACT that many dioxins are poisonous. If you want
the facts- it appears to me that the first order of business would be
for you to hear the TAPES which document the lies. Get a group
together of 100 or more people-(hopefully a few with chemical and
toxicological expertise)- interested in hearing the tapes and it will

be worth my time toplay them for you- free of charge.

Why do those millions of Americans need a nighttime AM service, which is
probably pretty poor anyway, when there is ubiquitous nighttime FM service
available?

>First proove to us that you are an expert at analizing chemical data.<

Wrong. It's YOU making assertions that someone is lying. It's up to YOU to prove it. It's not up to me to prove anything.

>Second- you appear to be disputing the FACT that styrofoam is not bio-degradeable. This leads me to believe that you are unqualified to accept chemical facts when they stare you in the face.<

Wrong again. Show me where I disputed your so-called "fact" (which you have yet to prove).

>You also appear to be disputing the FACT that many dioxins are poisonous.<

Yet another assertion without proof.

>If you want the facts- it appears to me that the first order of business would be for you to hear the TAPES which document the lies.<

Wrong yet again. Tapes, by themselves, document only what someone said. They don't document lies OR facts. YOU say they're lies...so YOU have to prove it.

>Get a group together of 100 or more people-(hopefully a few with chemical and toxicological expertise)- interested in hearing the tapes and it will be worth my time toplay them for you- free of charge.<

Gee, that's a nice little evasion you've got going there. You'll only play the tapes for 100 people.

BZZZZZZZZZZZZZZZZZZT! Sorry, but thanks for playing. Trolls are ineligible to win, but tell him about his consolation prizes, Don Pardo...

Amateur Radio Newsline=E2=84=A2 Report 1403 =E2=80=93 July 2, 2004

Amateur Radio Newsline report number 1403 with a release date of=20
Friday, July 2, 2004 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T. =20

The score is now Ham Radio one, BPL zero; OSCAR Echo is alive, and busine=
ss is
good for CW. =20

Find out the details on Amateur Radio Newsline report number 1403 coming =
your
way right now.

(Billboard Cart Here)=20
=20
**

## BPL: SCORE ONE FOR THE GOOD GUYS

A major broadband-over-power line pilot test by Alliant Energy in Cedar R=
apids,
Iowa is shut=20
down after local hams document the harmful interference and the Federal
Communications=20
Commission gets a formal complaint from the A-R-R-L. We get the details f=
rom
Amateur Radio=20
Newsline's Mark Abramowicz NT3V:

************

It took nearly three months to accomplish the mission, but amateurs in Ce=
dar
Rapids - armed=20
with ample data and the muscle of the American Radio Relay League - convi=
nced
Alliant to=20
prematurely halt their B-P-L test.

Jim Spencer, W0SR, first discovered the interference on his HF radio righ=
t
after Alliant=20
launched its B-P-L testing March 30.

Spencer, who quickly mobilized other Cedar Rapids hams to form a technica=
l
committee,=20
says the interference was so severe that it wiped out his and others' abi=
lity

to use=20
their radios.

Spencer says the group worked with Alliant officials to try to resolve th=
e
interference=20
and conducted several test measurements with the utility's cooperation.

Spencer tells Amateur Radio Newsline the group appealed to Alliant to shu=
t down
the=20
system and stop the interference on several occasions. But it was clear t=
he
B-P-L=20
industry was telling Alliant's managers something else.

"There's a lot of regulatory uncertainty here," Spencer explains. "And th=
at
what the hams=20
were calling harmful interference - in my case S-9 signals, you know, eve=
ry
1-plus=20
kilohertz across the band, they were being told that wasn't really harmfu=
l.''

Spencer says communications between his technical group and Alliant offic=
ials
were=20
civil, but they accomplished little action. He says he and others filed
complaints=20
with the FCC.

"I think in 21 communications I received one simple response basically to=
ld me
to go=20
back to the power company - the operator of the system," Spencer says. "A=
nd, of
course,=20
I had done that all the time. So, we had been asking the utility company =
to
close it=20
down, we had been asking the FCC to help us and then the ARRL went and
escalated that."

Wade Walstrom, W0EJ, is the ARRL's Midwest Division Director. He says the
league's=20
FCC complaint finally got the utility's attention.

"The thrust of the complaint was that they were now aware that the system=
 was
causing=20
interference and didn't shut the system off so now that makes it willful
interference,"=20

Walstrom said...

Alliant stopped the B-P-L pilot test on June 25 saying it had gathered th=
e
necessary=20
data to make a determination on whether a general rollout of B-P-L would =
be
worth=20
pursuing, according to Spencer. He says Alliant's project leader told him=
 the
ARRL's=20
FCC complaint was just one factor in the company's decision.

"Obviously we're happy, but we didn't feel like we had won," Spencer said=
. "We
felt=20
like this was a technical problem and that we tried to communicate some o=
f the=20
technical parameters to them and that they'd made a good business decisio=
n."

Spencer says an Alliant representative told him the company has no plans =
to
pursue=20
B-P-L at this time.

"In order to distribute it out to a sparsely-populated rural area with al=
l the=20
equipment it would take, it's not clear that this thing makes economic se=
nse,"=20
Spencer says. "And that this really can meet the goals of the rural user =
which
is=20
one of the things that people touted."

The ARRL's Walstrom is cautiously optimistic Alliant's decision might hav=
e a
ripple=20
effect.

"We would hope that other utilities or other organizations that were look=
ing to

possibly use B-P-L as a source of revenue will look and see the decision =
that
Alliant=20
has made and re-think their own plans and hopefully decide that maybe the=
re are
other=20
ways to provide broadband internet connections to the population as a who=
le,"
Walstrom says.

Walstrom says the Cedar Rapids group led by Spencer has set a precedent.

"All the proof on how well it's going to work isn't there yet," Walstrom =
says.=20

"And the proof that we have established here in Cedar Rapids and is comin=
g out=20
from other parts of the country is that it's not an interference-free sys=
tem by

any means and in fact it causes a lot of interference and we've documente=
d that
here."

Spencer says his committee, consisting of a group of engineers - most of =
them=20
retired from Rockwell Collins - stuck strictly to technical evidence in
communications=20
with Alliant.  But he says its clear B-P-L has taken on a very political =
tone.

"Obviously the problem has got a lot of political implications, but the t=
hing
that=20
hams can do is remain professional and keep it primarily on a technical l=
evel,"
Spencer says.

The ARRL's Walstrom says if he could stand before the FCC panel to make h=
is
case,=20
he would strongly urge the commissioners to postpone action on or even wa=
lk
away from B-P-L.

"I think they need to delay it until they're satisfied that they're able =
to
mitigate any=20
interference problems at all and by mitigate from an amateur radio standp=
oint
that really=20
means eliminate," Walstrom says.

Spencer adds, there are no hard feelings toward Alliant. Spencer says he =
and
members of=20
his technical group still have a good, working relationship with the util=
ity.

"We've had quite a bit of communication back and forth through this whole
thing," Spencer=20
says. "I mean I've had many, many e-mails and some phone calls and I woul=
d say

that it=20
was pretty positive and still is."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphi=
a.

************

In addition to operations in Cedar Rapids, Alliant also provides utility
services to=20
customers in sections of Minnesota and Wisconsin, and a small strip of
northwestern Illinois

(W0SR, ARRL)

**

HAM RADIO IN SPACE: ECHO IS UP AND RUNNING

The newest Amateur Radio satellite is now in orbit and doing fine.  Chuck
Green, N0ADI,=20
reported by phone from the Baikonur Cosmodrome that the launch of AMSAT E=
cho
and the=20
other satellites occurred on time on June 29th at 0630 UTC.  He watched t=
he
rocket climb=20
out and said it appeared to be flying straight and true. A second phone c=
all
from Chuck=20
18 minutes later confirmed that the launch carrying AMSAT OSCAR Echo was
successful and=20
that all spacecraft had separated successfully.

Chuck was assisted in the final integration and checkout process at Baiko=
nur by
the team=20
from SpaceQuest which included Dr. Dino Lorenzini KC4YMG, Mark Kanawati N=
4TPY,
and Lyle=20
Johnson KK7P.  The SpaceQuest team members are also AMSAT members and
volunteers.

First contact with Echo was at 1452 UTC on June 29th.  After collecting a=
 bit
of TLM the=20
435.150 MHz transmitter was turned off at 1500 UTC.  The preliminary keps=
 were
observed=20
to be pretty close. The first look at Echo=E2=80=99s telemetry shows thin=
gs are
looking good. =20
The battery was fully charged and the panels were delivering about 950 ma=

,
which is fine. =20
The panels were supporting the transmitter power adequately at about 2.3W
output.  The=20
bird appeared to be tumbling as expected.  Internal temperatures are arou=
nd 10
degrees=20
Celsius which is also as expected.

On the second pass the loading of software began and good progress was ma=
de.

Telemetry continues to look very good.  While fades clearly indicated Ech=
o
continues to=20
tumble (as expected), at 2.2 Watts output good bits were received without
difficulty. =20
Rather than turn the transmitter off at the end of that pass, based on a =
very
good=20
looking power system, the power was turned down to about 0.3 Watts.

The hour between passes was spent closely examining the captured telemetr=
y and
comparing=20
it to pre-launch testing, as well as tweaking the keps a bit.

During the second set of passes approximately twelve hours later, the com=
mand
team=20
finished loading the housekeeping software.  The housekeeping task is up =
and
running=20
as of June 30th at 0525 UTC.  With more data available on the power syste=
ms
performance=20
the transmitter has now been left at about 1.2W.

The morning passes on June 30th concentrated on gathering telemetry.  The
evening passes=20
continued with checkout activities.

A telemetry decode program, TLMEcho, is available for those who would lik=
e to
view and=20
report data from Echo.  It may be downloaded from AMSAT.ORG in the Echo p=
roject
area,=20
http://www.amsat.org/amsat-new/echo/

If you record telemetry please send the CSV files to ke4azn@amsat.org.

Please do not transmit to Echo until checkout and commissioning has been

completed and=20
the satellite is made available for general use.  Unexpected uplinks may =
cause
delays=20
in verifying the proper operation of ECHO and delay the opening of the
transponders to=20
general use.

(AMSAT, WD0E)

Break 1

>From the United States of America, We are the Amateur Radio Newsline, hea=
rd on
bulletin=20
stations around the world including the N7SKO repeater serving Arizona,
California and Nevada.

**

WITH NEWSLINE:  SEND US YOUR ID - PLEASE

Would you like to ID your own repeater or bulletin station here on Amateu=
r
Radio=20
Newsline?  Well here is how you can do it.  Record the following sentence=
 and
include=20
the call sign and location you want to honor.=20

>From the United States of America, we are the Amateur Radio Newsline, hea=
rd on
bulletin=20
stations around the world including the xxx repeater serving yyy zzz.  Th=
e xxx
is the=20
call sign.  The yyy and zzz are the city and state. =20

Then, take the tape and mail it to Amateur Radio Newsline, Editorial Offi=
ce,
28197=20
Robin Avenue, Santa Clarita, California, 91350.  As time permits, we will
select an=20
audio I-D and include it in the newscast. =20

All tapes submitted become the property of the Amateur Radio Newsline and
cannot be=20
returned.  Again, the address to make yourself a part of this bulletin se=
rvice
is=20

Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clari=
ta,
California, 91350.

**

## RESCUE RADIO: VA HOSPITALS SAY YES TO HAM RADIO

Hospitals in Roanoke, Virginia, will soon be ham radio equipped.  Mike Kn=
ight,
K4IJ,=20
reports through the Repeater Journal that a budget of twenty-five thousan=
d
dollars has=20
been approved for the installation of Amateur stations at between ten and
twelve primary=20
healthcare facilities in the Roanoke area. =20

Knight says that the system will include a dual band base radio, a mobile
radio, a power=20
supply, antennas and full lightning protection at each hospital.  Also go=
ing
on-line will=20
be a pair of commercial grade FM voice repeaters with back-up generators,=
 and a
dedicated=20
digital repeater.  The voice systems will have IRLP and Echolink tie-ins =
to
communicate=20
outside the local area. =20

When completed, the Roanoke system will consist of five to six linked
repeaters.  The=20
base stations will be connected to each hospitals emergency power system =
to
keep them on the air.

(Repeater Journal)

**

## RADIO LAW:  COURT SAYS NO TO EXPANDED MEDIA OWNERSHIP

A U.S. Court of Appeals in Philadelphia has thrown out most of the Federa=
l
Communications=20
Commission's new and controversial media ownership deregulation.  Its Thu=
rsday,
June 24th=20
decision means that for the time being, ownership levels of broadcast
properties and=20
related media will remain at current levels.

Back on June 2nd of 2003, the FCC's Republican majority voted to dramatic=
ally
ease a=20
prohibition barring daily newspapers from buying broadcast stations in th=
eir
markets. =20
The agency lifted caps limiting how many radio and TV stations a broadcas=
ter
could own=20
in the same area.=20

But in its 2 to 1 decision the Philadelphia court said that while some
relaxation of the=20
ownership limits might be reasonable, the agency had failed to adequately
justify the=20
limits it had put in place. The court announced that its original stay on=
 the
FCC's media=20
ownership deregulation would continue until the agency fixes the regulati=
ons to
the court's=20
liking.=20

(TV Week)

**

## ENFORCEMENT:  TOO MUCH MORSE CODE

The FCC is asking a Missouri ham why he is running a Morse code training
program smack in=20
the middle of the 40 meter band.  The target of the inquiry is Paul D.
Westcott, KC0OAB of=20
Purdy who apparently has code practice on the air around the clock.

Its June 21st letter to Westcott notes that the agency had previously dis=
cussed
this matter=20
with KC0OAB and was given assurances that the transmissions he was making=
 were
for Morse=20
Code practice.  Since that time the agency has received another complaint=
 which
alleges=20
that the purported 40 meter code practice transmissions are 24 hours a da=
y,
seven days per=20
week. The FCC says that due to the crowded nature of the 40 Meter Band, i=
t is
extremely=20
inconsiderate to take up spectrum in that area for transmissions 24 hours=
 a
day.  This,=20

even if it is purportedly for =E2=80=9Ccode practice=E2=80=9D purposes.

The agency has posed several questions to Westcott to explain his operati=
on and
was given=20
20 days from the date of the FCC letter to provide a very detailed respon=
se.

**

## ENFORCEMENT:  NO LICENSE - DON=E2=80=99T OPERATE

The town of Reseda, California, is only about 10 miles from the Newsline
studio.  It=E2=80=99s=20
also the place where the FCC alleges that someone has been operating a ha=
m
radio transmitter=20
without the benefit of being a licensed ham.

In a letter to a resident identified as Joseph A. Mosbergen, the FCC says=
 that
he or someone=20
in his residence has been operating radio-transmitting equipment on sever=
al Los
Angeles area=20
Two Meter Amateur Radio repeaters.  The agency warns Mosbergen that this =
is a
violation of=20
it rules and will subject him or whoever is proven to be operating to pun=
itive
action. =20
This could include a fine or imprisonment, as well as seizure of any
non-certified radio=20
transmitting equipment.  It also tells Mosbergern that this is the last w=
arning
that he=20
will receive.

**

## HAM RADIO BUSINESS:  HEIL TO MARKET CLEAR SPEECH SPEAKER

Turning to the ham radio business scene, word that the NCT Group has appo=
inted
Heil Sound=20
Limited as its prime worldwide manufacturer and distributor of the Clear =
Speech
Speaker=20
system.  Under the terms of the deal, Heil Sound will distribute Clear Sp=
eech
speakers to=20
their present amateur radio dealers and commercial broadcast distributors=
.=20

Also, the=20
Clear Speech speaker will be improved and several new products will be br=
ought
to the market=20
using the NCT Group technologies.  According to Heil Sound these new prod=
uct
models are in=20
development and will be available for market by the end of July.  More is=
 on
line at=20
www.heilsound.com

**

## COMMUNICATIOS NEWS:  DUAL-CORE PROCESSORS ON THE WAY

Tech News reports that Advanced Micro Devices plans to begin selling micr=
ochips
with=20
the equivalent of two microprocessors in one next year.  The Sunnyvale,
California based=20
company said it plans to offer dual-core processors for data-serving busi=
ness
computers=20
in the middle of next year, and for high-end home computers in the second=
 half
of next year.=20
   =20
Dual-core technology combines the power of two processors in one package.=
  This
permits=20
the creation of a more powerful computer and increased computation power =
when
multitasking.

Last month, Intel said it would bring dual-core chips to the marketplace =
in
2005. That=E2=80=99s=20
more than a year ahead of schedule.

**

## HAM RADIO BUSINESS:  CW IS GOING STRONG

If you think Morse code is on its way out, the ham radio business communi=
ty
probably=20
disagrees with you.  At least that=E2=80=99s the impression one gets thum=
bing through
the articles=20
in the July issue of CQ Magazine.

Not only are the ads for Morse related products holding steady, but the n=

ew
products area=20
has some reviews of the latest CW related products.  And not to be outdon=
e,
Dave Ingram,=20
K4TWJ, devotes his World of Ideas column to Morse Keys from around the wo=
rld.

If you are a Morse lover, this is the CQ edition for you.  It=E2=80=99s o=
n your
newsstand now. =20
More information is on the web at www.cq-amateur-radio.com.

**

THE SOCIAL SCENE:  COME TO THE TENNESSEE HAM BREAKFAST

On the ham radio social scene, the Middle Tennessee Ham Breakfast takes p=
lace
at the=20
famed Tennessean Truckstop on the second Saturday of every month.  People=
 begin
to=20
gather there at about 9 a.m. and it=E2=80=99s billed as a chance to meet =
the middle
Tennessee=20
hams you may have contacted on the air. =20

Interested in attending? For full information simply send a note to
kenbreed@surfmore.net=20
or call Ken, AI4DV at area code 931 =E2=80=93 424 =E2=80=93 9523 during n=
ormal business
hours. =20

(Do Not Read:  Repeater Journal)

**

THE SOCIAL SCENE:  ROANOKE VA. IN JULY

And still in the South, mark down July 31st to attend the annual Roanoke
Hamfest. =20
This event is sponsored by the Roanoke Valley Amateur Radio Club and will=
 be
held at=20
William Byrd High School in Vinton, Virginia starting at 8 a.m. local tim=
e.=20
Full=20
information on this friendly event is on line at w4ca.host4www.com=20

**=20

## BREAK 2

This is ham radio news for today=E2=80=99s radio amateur.  From the Unite=
d States of
America,=20
We are the Amateur Radio Newsline with links to the world from our only
official=20
website at www.arnewsline.org and being relayed by the volunteer services=
 of
the=20
following radio amateur:

**

## COLOR TV IS CELEBRATING ITS 50TH ANNIVERSARY THIS YEAR

Now for a bit of a history lesson.  Although color TV transmissions were =
in the

development stages many years earlier, the broadcast industry is celebrat=
ing
its=20
half century mark this year.  This is because it was 50 years ago that co=
lor
broadcasts=20
were initially
made available to the public. =20

Now, National Public Radio has posted a story and some interesting histor=
ical
resources=20
at its website.  It is very interesting reading.  That URL is in this wee=
k=E2=80=99s
printed=20
Amateur Radio Newsline report. =20

(www.npr.org/features/feature.php?wfId=3D1789944 (CGC))

**

## EMERGING TECHNOLOGY:  NEW DVD PLAYER FILTERS OUT BAD WORDS

Wal-Mart is selling the world's first DVD player that can seamlessly skip=
 over
violence,=20
swearing, nudity and other potentially offensive movie content. The $79 u=
nit
features=20
technology by ClearPlay and is manufactured by Thomson Inc. under its RCA
brand.=20
=20
The DVD player is the latest development in a legal battle between the Sa=

lt
Lake City-based=20
software company and Hollywood.  Members of the Directors Guild of Americ=
a
filed suit=20
against ClearPlay in September 2002, when the filtering product was avail=
able
as a=20
computer program claiming it impinges on intellectual and creative rights=
.=20
Those legal=20
proceedings are still under way in Colorado's 10th District Court. Both s=
ides
currently=20
are waiting for a ruling on a summary judgment filed by ClearPlay.=20

**

WORLDBEAT - SLOVAKIA:  FIRST CELLPHONE VIRUS ANNOUNCED

On the international scene word that a group of underground virus writers=
 have
announced=20
what is believed to be the world's first worm that can spread on advanced
mobile phones. =20
According to news reports, the worm named Cabir, was sent to security sof=
tware
firms in=20
the United States and Russia by a member of 29a. =20

29a is described as a group of virus writers from the Czech Republic and
Slovakia who=20
pride themselves in creating proof of concept malicious viruses. Thankful=
ly,
Cabir has=20
been found to have no damaging code attached that might destroy files or
execute other=20
harmful operations.

**

WORLDBEAT =E2=80=93 UK: RSGB QSL BUREAU CHANGE

On a more positive note, word that Marc Litchman, G0TOC is the new RSGB Q=
SL
Bureau=20
Sub-Manager for the G7AAA through G7ZZZ series of callsigns.  Litchman ca=
n be
reached at=20
26 Oak Tree Close, Loughton, Essex IG10 2RE, in the U-K. =20

**

WORLDBEAT =E2=80=93 NEW ZEALAND:  ZL1AN HONORED FOR EDUCATIONAL WORK=20

And a word of congratulations to New Zealand=E2=80=99s Dr. Gary Bold, ZL1=
AN.  Bold is
a physics=20
lecturer at the University of Auckland and he has been awarded the Prime
Ministers=20
Supreme Prize based in part on his 43 years of dedication to teaching. =20

Bold has taught every course in the physics department, all courses in
geophysics signal=20
processing and network theory.  He has also devised and revised experimen=
ts and
designed=20
the curriculum for many second and third year physics courses.  A dedicat=
ed C-W
enthusiast,=20
in his spare time he writes the NZART Break-In Magazine column "The Morse=
man."=20

The presentation was made at the recent 2004 Tertiary Teaching Excellence
Awards. =20
ZL1AN was one of 12 academics from nine institutions presented with award=
s,
each of which=20
brings with it a $30,000 prize.

**

DX

In D-X, word that several O-H prefix operators will be operational from A=
land
Island as=20
OH0I during the CQ Magazine and RTTY Journal RTTY DX Contest.  This, from
September 25th=20
to the 26th.  They will operate as a Multi class 2 entry using multiple b=
eams
and vertical arrays on the low bands. QSL via OH3BHL.

And keep an ear open in September for RA3AMG from Cyprus.  He will also b=
e
active in the=20
same contest signing P3B.  QSL via his home callsign.

Lastly, ST2DX will be active from the Sudan until the 10th of July.  Look=
 for
him mainly=20
on SSB, with some CW, on all bands between 30 and 6 meters.  QSL this one=
 as
directed on the air.

**

THAT FINAL ITEM =E2=80=93 HAMMIN=E2=80=99 OLDIES ON WBCQ

And finally this week=E2=80=A6 who says hams and short wave listeners are=
nothing but
a bunch of=20
stuffy old geezers?

The Peacock Project is a group of Internet broadcasters that have banded
together to=20
present a variety of music eras, styles and talk over WBCQ on Saturday ni=
ghts
at 8PM=20
Eastern time, which is Midnight Universal Time, Sunday. Named in tribute =
to one
of their=20
group, Rob Peacock, who suddenly passed away in January, the show feature=
s a
different=20
host each week with a program that is unique to his own musical preferenc=
e and
personal=20
presentation. =20

The first weekend of every month will feature Dave Kirby's look b=
ack at
Old Time=20
Radio and some non-English language versions of American songs.  The seco=
nd
weekend is=20
The Voice of Savage Henry, a 1960's and 70's "Garage Band" rock show host=
ed by
Steve Evanchuck,=20
KG8KO.  Tim Gaynor is heard directly from Australia on the 3rd week and t=
he 4th
week is S
teve Coletti, aka =E2=80=9CBig Steve Cole=E2=80=9D. Four times a year the=
re is a 5th
Saturday to the month=20
and on those weekends it is time for "Hollow-State Hound", a show schedul=
ed to
feature=20
big band music with Mike "The DX Hound".

The broadcasters got together in an odd way, and going on WBCQ's 7=
415
kHz frequency=20
is like going home to where it all started.  A few years ago there was a =
group
of ham radio=20
operators who were also listeners to shortwave broadcasters and utility
stations. Under the=20

umbrella organization of the Association Of North American Radio Clubs,
(ANARC), they would=20
join into a ham traffic net every Sunday morning on 7240 kHz to compare t=
heir
station=20
loggings. While the net still has a lot of good memories for those who jo=
ined
in or only=20
listened in, the group eventually disbanded. The net then moved to an In=
ternet
Relay=20
Chat channel that was already in existence.
To a few die hard members like Dave Kirby, N1DK, the discontinuan=
ce of
the radio=20
net was only a minor setback. Dave began doing weekly reports by way of =
the
Cyber=20
Shortwave real audio file that was available for download by anyone. It w=
as at
the suggestion=20
of member Pete Costello that Dave began doing his presentations as a live
interactive program=20
by way of sending sound via live365.com and receiving typed comments back=
from
listeners via=20
the IRC chat channel.

As loggings and SWL news tapered off, Dave began doing more music=
and
off topic bantering. =20
This led the powers that be at the chat room to ask Dave to create his ow=
n chat
room for the show. =20
The kick in the butt turned out to be a blessing as now the door was open=
ed for
others who wanted=20
to do interactive radio using Dave's chat room

We hope that you will enjoy the diversity of programming that the=
se
enterprising hams and=20
SWLs have created. The Peacock Project begins July 3rd on WBCQ at 7415 k=
Hz and
your fellow=20
broadcasters, hams and SWLs at the Amateur Radio Newsline wish you the be=
st.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magaz=
ine,
the FCC, the=20

But a person who chats about social and political issues is chatting... a
form of entertainment.

>
> A song and dance man performing on stage or on the radio is called an
> -guess what! RIGHT !  AN ENTERTAINER !

Rush Limbaugh, in the 1988 R&R Talk Radio Seminar in Washington, stated he
was first and foremost an entertainer. Talk shows are listened to for their
entertainment value. News shows are listened to for their informational
value.

Paraphrasing a Spanish saying, "you can't get pears from an elm tree."

A person commenting on the news is - guess what?  RIGHT!  He's NOT A
REPORTER!  The commentary is an OPINION!

The play-by-play announcer provides tha facts of what happened in the game.
The color COMMENTATOR gives his opinion of the game and/or player.

If nighttime AM propagation characteristics are no longer considered useful,
then indeed the whole AM band is basically not useful any longer, because
skip is what makes AM what it is.

Because I am in a typical area I will comment.  The local AM stations spend virtually all their time on sports or if not inane political talk. The FM stations abound in country music and every variation of rock that can be found except for the NPR stations which are either classical music (not objectionable as far as I'm concerned) or jazz.

The intelligent talk comes from former class I-A clear channel stations via sky wave from other markets. I particularly like Milt Rosenberg on WGN in Chicago.

I've heard the tests of IBOC. I understand that the military will not relinquish the 1500 mHz spectrum area that other countries are using for Eureka, but there will be a lot of high UHF spectrum available with the DTV conversion. It's been said that the NAB has killed the idea of Eureka because it would give everyone an equal playing field whether you are a 250 watt peashooter or a 50kw blowtorch. I'm not exactly sure of the working of Eureka but possibly an antenna height difference could be built in to give the present higher power stations an advantage.

Just my humble opinion.

Charlie

Sorry, but there you're wrong (as the FCC has defined it, anyway.)  Limbaugh
et.al.
are entertainers, as the programming they provide is entertainment programming
which
is not subject to the more demanding tests of a newscast.  Further, even though
they
comment on current affairs (another facet of journalism) as entertainers they are
still not held accountable for facts, differing opinions or, for that matter,
pretty
much anything else.

>  A song and dance man performing on stage or on the radio is called an
> -guess what! RIGHT !  AN ENTERTAINER !

Right.....so now you can understand that your crusade is without merit.  The FCC
has
bigger fish to fry.  Try getting this kind of programming re-classified, and
restore
the Fairness Doctrine to its previous role in providing a broad sampling of
opinion
on the broadcast media.  Then you might have a case.

Is an American Family Radio all-religion-all-the-time station a suitable
substitute for a modern-rock outlet?

(yes, under FCC rules.  No, for anyone who listens to either station...)

Eureka 147 has a very good RF transmission system combined with an obsolete audio codec (MP2) that causes severe spectrum inefficiency (by a factor of at least 2x) compared to what could be achieved with a state of the art codec. OTOH, Eureka 147, modified with the AAC / AACPlus codec, would be a killer system.

Unfortunately those improved wider band antenna systems will only be passing analog audio that has
been hard band limited to frequencies below 5 kHz to be compatible with the IBOC data carriers.

It's arguable that the pits on a regular CD (not a CD-R) are "cut" (althoug some say "burned") at mastering time. So the terminology is not far-fetched at all when applied to mass-replicated CDs.

Tape is another matter.

==================================================================

Press Release: Rock-it Radio makes historic 1000th broadcast

Rock-it Radio the popular internet radio station playing 1950's Rock and Roll, Rockabilly and Doo Wop this week has just completed their momentous 1000th broadcast.  No other internet Radio Station has completed such a task and the station remains committed in keeping the music of the first decade of Rock and Roll, Doo Wop and Rockabilly alive.  Over twenty five musical celebrities from Gary U.S. Bonds to Brenda Lee gives a heartfelt congratulations to Rock-it Radio in this special 3 1/2 hour broadcast that also features the DJ's that are all volunteers and music collector's themselves from around the globe.

Rock-it Radio is a free service and all that is required is the Real Player software in your computer to play the programs.  Rock-it Radio also hosts an online listeners club of over 3700 listener's and it's main location is in Ventura, California and is run by Bennie Dingo a Ventura native.

Rock-it Radio's historic 1000th broadcast tells the interesting story of it's beginnings as a syndicated radio program to Radio Station IRRS in Milan, Italy in 1995 and WRMI in Miami, Florida to beginning broadcasting over the internet back in 1997. Rock-it Radio is listed as the first station to broadcast Rockabilly Music of bands today and yesterday over the internet.

If you wish to check out Rock-it Radio we invite you to check us out at:
http://www.rockitradio.net

And if you wish to tune into the historic broadcast of Rock-it Radio's show #1000 by going to the archived show page at:
http://www.palmsradio.com/rockittext.htm
and clicking to show #1000.  The broadcast will remain online for the entire month of July.

The "Radio Crazy" is baaaaakkk!

Sadly the "Radio Crazy" predicts that AM IBOC will be
a total "bust" going the way of the horse and buggy,
the shaving cup, Quad FM(circa 1973).

You heard it first here!

Hello,

I've created a discussion group (mailing list) to discuss high fidelity AM tuners and hobbyist transmitters. Appended below is the more detailed group description.

To subscribe to this group, either go to the group home page (at Yahoo) and subscribe there (you will need a YahooID):

http://groups.yahoo.com/group/hifi-am/

Or, if you don't have a YahooID, send a blank email to:

hifi-am-subscribe@yahoogroups.com

Looking forward to seeing you there!

Jon Noring

**********************************************************************

Group Description for hifi-am:
==============================

The purpose of hifi-am is to explore the possibilities of high fidelity AM tuners and hobbyist transmitters for medium-wave (or better known as the broadcast band, appr. 520 to 1720 khz.)

Although most commercial AM broadcasts are definitely not high fidelity (due to various factors including, in many countries, audio bandwidth restrictions), there are nevertheless a few commercial stations which broadcast with audio quality approaching high fidelity. For example, in Australia, because the number of stations is fewer and the country quite large, many stations broadcast with quite wide audio bandwidth, approaching 15 khz.

There is steady growth in interest (in the U.S.) for non-licensed hobbyist broadcasting in the BCB (per FCC "Part 15"), which is restricted to 100 milliwatts and a three meter antenna (among a few other minor restrictions). With a high efficiency antenna, it is possible for such neighborhood broadcasting to be heard about 1/2 to 1 mile from the transmitter. There are quite a few progressive and alternative stations broadcasting this way. For a wonderful example, see Radio KMTZ.

More importantly, it appears there is no specific restriction on audio
bandwidth for Part 15 transmissions. Thus, if this is true, the
broadcasts can approach high fidelity (15 to 20 khz audio bandwidth.)

Although discussion can focus on the general topic, it is hoped this
group will catalyze the development of hobbyist kits for high fidelity
AM tuners (digital, solid state, and tube) and for high fidelity
low-power (Part 15) AM transmitters. It should be fun to consider the
many possibilities.

I recently drove across Mexico from Monterrey to Mazatlan and south to
Guadalajara and never lost satellite service.  It was marginal sometimes.

The signal strength meter sometimes showed only one bar where it usually shows three (max signal.)

It sure helped pass the time in the deserts.

Analogue radio switch-off nears

A switch-off date for analogue radio will be decided later this year by Culture Secretary Tessa Jowell.

Ms Jowell said she would review digital radio take-up in a foreword to a report due to be published by the industry's Digital Radio Development Bureau.

She said she would be "considering how long it would be appropriate for sound digital broadcasting services to be provided in analogue form".

By the end of June, 600,000 digital radios had been sold in the UK.

The decision to switch off analogue radio will mean about 100

```
        million radios will become obsolete.

I'm looking for a couple of Arrakis TPM1 (stereo line level input
module) cards for a 12,000 series console.
Used ones would be fine.
We have two of these consoles in use at our community non-commercial
radio station.
Find out more about us a kmud.org
Thanks

  How about a talk show host who reads a news story from a news
service posting and inserts his own LIES in the story- and passes it
off as having been read verbatum? HuM?
> >
> > A song and dance man performing on stage or on the radio is called an

Who ever brought up the name "Limbaugh" in all this? Why would you immediately mention Rush Limbaugh regarding this topic of falsifying the news? Limbaugh is hardly an expert at labeling himself. Sorry- when ANYONE professes to be reading facts (wether from a news service or from a medical journal)- and inserts his own LIES and then tells us "I'm reading this verbatum"- YOU may label that "entertainment" but I think most of us label it something else.

p.s. Are you Rush Limbaugh posing as David Eduardo?

I will be doing radio play by play of  two soccer games in ten days. I know a little about soccer. I do know the differences between a corner kick and a goal kick, indirect and direct free kicks, and a very basic knowledge of the rules. Is there someplace where I can get some idea about how to pull this off?

That was WEFM in Chicago, generally considered the world's first commercial FM station and a longtime home for classical music.  Zenith Radio decided that they didn't need to run the station as a loss leader to promote sales of FM radios and sold it to General Cinema, who then announced that they were going to flip it to Top 40. Even though there were two other FM signals programming full-time classical music in Chicago at the time, because a "Citizen's Committee to Save WFMT" had forced the Tribune Co. to sell that classical station to WTTW, the public TV station in town, after 'FMT's founder had sold it to the Tribune, the same people decided to fight WEFM's format switch with a "Citizen's Committee to Save WEFM." They got a court injunction in spring 1972 that stopped the format change the night before it was going to happen--with an air staff hired, billboards out on the street, ads in the weekend papers and the record library all packed to be shipped to WNIB, the *other* classical music station in town.

Soon afterwards, the FCC then washed its hands of judgments on radio format changes. It still took General Cinema five years to flip the station, after making agreements to donate programming and materials to both WNIB and NPR station WBEZ. The flip to Top 40 finally occurred in early 1978. Like WDHF/WMET a few years earlier, the station got some teen audiences, but they were unable to take the mass audience away from WLS and the station flipped to the Schulke II MOR format at the end of 1980. In 1982, General Cinema sold WEFM to Greater Media, who flipped the format to country and the call letters to WUSN-"US99." It's still country and still US99 today, although Infinity has owned the station for the last decade.

WBEZ dropped its few hours of classical music programming after the death in the early 80s of Dick Noble, the former WEFM morning drive man who switched to 'BEZ as part of the format change agreement (and was moved out of morning drive to 9 a.m.-to-noon when NPR's "Morning Edition" premiered in 1979). Noble's show was the main classical programming on the station, which was (and is) primarily talk and jazz. WNIB, the last ma-and-pa FM in Chicago, was sold to Bonneville in 2001 for a lot of money and is now the successful classic hits WDRV--"The Drive." WFMT, still owned by WTTW, is now Chicago's only commercial classical music station.

Soccer for Dummies is actually pretty good, and great for someone with
little soccer knowledge.

Bookstore, or have Amazon overnight it.

Excuse me, Sid, but as you've asked in a newsgroup, it seems to me that there's nothing which prevents me from responding.

Further, troll or not, I think this guy has a respectable mission....the amount of quackery, deception and outright larceny which passes for legitimate advertising needs to be stopped, whether it's weight-loss pills, invention patent acquirers or

FCC spectrum lottery shares (of course, where is the FTC with the new "Medicare discount" cards that are being advertised now?).

The only trouble with FTC regs is that a complaint, or several, need be launched before they'll take action.  Not that I would expect otherwise, since a more agressive effort would be prohibitively expensive, probably treads on free-speech guarantees, and still wouldn't make much of a difference.  It's still up to the consumer to be at least a little cautious before plunking down money for a dubiously useful product or service.  But I applaud anyone who would make an effort to collect (and, I would assume, act on) these abuses so as to make fraudulent and deceptive advertisers more likely to see the scrutiny of the FTC.

Of course, everyone assumes its a music format? (it probably is, but I
feel the need to mention this point).

I'm definitely one for brickwall AND dynamics, and have found a great
setting for just the thing you're after. The key is with AGC and
multiband. If you can separately ride your primary attacks in
multiband at about 10 or so db, this will give you your brickwall, and
create nice dynamics in silent spots with a fairly slow release on the
AGC. This is great for voice too. Again, use a gate to keep everything
clean. Keep the limiter light too.
EQ and all other settings to your taste. :)

Let us know how it goes.

Richard

My suggestion is that you call Harris-Allied or BSW and tell them what you
want, because there are a lot of different devices out there.  And what you
want depends a lot on how you're going to feed it and whether you are using
an existing automation system to generate the data or whether you just want
to hack your own serial connection up from something else.  And also you need
to know how to deal with exceptions when the program is interrupted and you

are going from another feed than is scheduled.

Another BIG question is whether you want scrolling or not, and that is a
matter of pretty major debate these days.  I'm in the no-scrolling camp,
but your GM may be big on scrolling.

does anyone know if there is a sirius permanent mount antenna
available for a vehicle. Something where the antenna may be
permanently attached to the body and the coax is fed in the body under
the antenna?

Can you document that? FAIR has recently done an analysis of NPR and came up with figures that clearly dispute your claim. FAIR counts quite a few more conservatives as guests on NPR than knee-jerk anti-NPR people are used to complaining about.

I don't recall hearing a single conservative guest on Air America. That would make Air America much farther left (by their own admission and promotion) than NPR.

Rich

He keeps making a big deal of having a few hundred volts on his loop. I remember using an end-fired "long" wire antenna on 160 and 80 meters when I was 14 years old in the 1950s. The antenna was some 200 feet long. In clear weather, it usually had a fair amount of voltage on it. I put a VTVM on it and noted that the voltage would get to a few hundred volts at times, especially when a storm was a few miles away. During a storm, the voltage could get over 1000V, if I was foolish enough to measure it. I was!

I could easily get a sufficient voltage to jump a gap. Since my ham equipment was all vacuum tube, I didn't worry about the voltage. Besides, I would ground it out with an RF choke except when I wanted to measure the voltage.

When I was older, I was the CE of a 10 KW-DAD in WI and at night used its 2-tower phased array with 360 ground radials in a peat bog on 160 and 75/80 meters. That antenna easily connected to South America on 75 meters with my homebrew 4CX1000A final. I could measure a hefty voltage on that antenna too, so I always shunted it to ground with an RF choke, to keep me from being zapped when I moved around the spades in the doghouses.

The Sunday, June 27, 2004, Washington Post http://www.washingtonpost.com/ carried a 1/4-th page story on IBOC.  It is on page F7 of the business section, written by Rob Pegoraro.  You'll have to register to read it online.

Pegoraro was lent a car by iBiquity with both AM and FM IBOC [Panasonic]. He drove it for three days, both in the extended Washington area listening to FM-IBOC and to Philadelphia to try the AM since there are no nearer AM-IBOC stations.

To make this very short, he reported "MP3" quality audio and coverage problems on both FM and AM.

Regarding FM-IBOC, "In general it functions only where analog broadcasts already work fine."

Regarding AM-IBOC: "But digital AM's reception was even shakier than digital FM's. Driving underneath a cluster of electrical wires or a sufficiently long overpass - or simply going through some intersections in the center of Philadelphia - routinely cut out the crisp stereo sound and dumped me back into scratchy old AM."  [Note - he was listening to WPEN 950, which has the equivalent of over 200 kW toward central Phily.]

He also reported that WETA-FM's analog and digital were a few seconds out of sync, but that is certainly not inherent.

I imagine that iBiquity isn't too happy with the story.

Yes, there are a bunch of them available.  I think they are not just passive
antennae but have at least a head amplifier in them.  Check your local truck
stop.  I know T/A truckstops usually carry a couple.

I think it was Boortz who said he was on Frankin.  He also said never again.

I say ***FUCK THEM** and the lame horse they rode in on. IBOC will not hold
a candle to XM or Siruis. I have listened to Siruis, I own several XM
receivers and they both sound better than the AM IBOC and equal to (and
better) than the FM version. Coverage on both systems beats the socks out of
the test stations running IBOC.

Lets see what people have to say at the next "CES" show in Las Vegas.

Well, okay, but I thought the purpose of newsgroups were, among other goals, to
help
each other out.  But I now see that the protestor is looking at programming which,
depending on the pitch, isn't covered by FTC mandates....given what passes for
entertainment programming these days, listeners are on their own to determine the
efficacy or prudence in adopting practices or strategies heard on air (a hint,
though.....it's worth every penny paid).

> I imagine that iBiquity isn't too happy with the story.

Two things come to mind from this article....the idea that I'd have to accept
(when
stations go to non-compatible digital mode) a less-than-acceptable audio signal
(as I
just can't stand MP3 quality, even at higher codecs raths), just so the station
can
claim it's "High Definition" is unacceptable.  When I travel, I expect that I
should
be able to listen for at least a half-hour from city's center to where I'm going,
and
this system pretty clearly won't measure up.

The second issue (although this goes away when stations go full-dgital) is why a
station wouldn't do an analog delay to match the delay for the encode process on
digital.  Of course, this means station monitors couldn't be used by on-air
talent....yet another obstacle to being able to monitor quality, particularly in
combo operations.

I'm glad I did a lifetime subscription to Sirius.  It looks more and more like
I'll
be listening to this more as the days of traditional broadcasting comes to an
end.....

I think ALL of these antennas have what amounts to an LNB.  Which is one of the reasons why they're so expensive (you don't think someone would discount them deeply, thus starting a price dive to more reasonable profit margins?).  Also, since the coax feed that comes from my magnetic-mount is so small, I'd expect that the losses from a passive antenna, combined with feedline loss, would result in an unusable signal. Thus, after first pickup, there's a stage or two of amplification, along with a conversion to a more reasonable frequency for further manipulation by the satellite receiver proper.

This is no different than the way TV DTH receivers work, the only difference being that TV, which requires a better signal-to-noise ratio because of the wider bandwidth, also uses a directional antenna to improve the received signal.

In 1996 when WPAT-AM was sold to Heftel Broadcasting and WPAT-FM was sold to Spanish Broadcasting System and both companies moved their studios and offices to New York City and I assume their transmitters were also relocated either to the Empire State Building and/or to the World Trade Center. What became of the offices, studios and transmitter towers on Broad Street in Clifton?

Also is their anywhere on the Internet with either downloadable or streaming airchecks from WPAT?

Any info is greatly appreciated.

RW,

In the past when former president Clinton was president.
NPR referred to him as President Clinton.

Now what does NPR do when referring to "President Bush"
they use negative omissions and detractive code words:
simply referring to the President as "Bush" or 'mister' "Bush"
and the "Bush" 'administration'.

NPR is the primary propaganda organ for the Liberal Media ELITE [.]

So Say I, My Opinions Stated As Facts ~ RHF

Why on God's earth would Franken interview another talk show host,
unless the shows were simulcast and Franken could get exposure on
Boortz's stations? Did Boortz do something of news value that almost
required an interview?

Of course "never again." What did Boortz expect? Probably the same
treatment a liberal would get on a conservative show. Two absolutely
immovable objects ranting at each other. Same ol, same ol.

Rich

Franken caught Boortz in a lie about having offered Franken to guest-host Boortz's show (back before AA existed), and saying that Franken had refused because Boorts wouldn't allow him to control the phone callers.

Franken called Boortz on the lie while on the phone with him, playing the tape of Boortz lying, then forcing Boortz to admit that he had lied. I heard the segment.  Boortz came off as a lying, blowhard putz.

Of COURSE Boortz said "never again" after that.

Lying, blowhard putz?  Speaking of Michael Moore, did you ever pin
down the alleged "lie" by Fred Barnes that had the humor-challenged
all in a tizzy?

WPAT- AM still broadcasts from Clifton, although the studio location is unknown to me.

WPAT-FM had its antenna on the WTC, and moved to the ESB after 9/11.

Bob Haberkost <cbclistener-really!-@canada.com> had written:
|
|
| The second issue (although this goes away when stations go
| full-dgital) is why a station wouldn't do an analog delay
| to match the delay for the encode process on
| digital.
|
In the San Francisco Bay Area, KFOG(FM) is apparently implementing
a delay for its analog signal. You can tell by comparing what's
on KFOG to what's on its Los Altos repeater, KFFG. Both are
fairly easily received in much of the Peninsula and bayside
East Bay.

I don't know if KFOG's boosters are running IBOC, though.
Apparently, KFFG isn't.

The WPAT-AM transmitter is still in Clifton.  (skyscrapers are not a suitable site for an AM transmitter, especially a multitower directional array like WPAT's)

I thought the FM was already on the ESB before it was sold?

So I guess it's safe to assume that if the AM transmitter and towers are still located in Clifton then the building which originally housed WPAT's offices and studios is still standing as part of the transmitter site. I also assume that the current owners of WPAT-AM kept some of the studio equipment in Clifton in the event of an emergency such as a blackout in New York City they could switch over the broadcast to the backup in Clifton? (Am I wrong about this?).

Anyone have recommendations for a manufacturer and model of a high sensitivity AM BCB car radio? I know car radios tend to be quite sensitive, but am looking for a model at the better spec end of the range. Type of tuning and type of display is unimportant.

TIA. Graeme

AM 93 WPAT is now owned by Multicultural Broadcasting (also owner of AM 1430 WNSW, AM 1480 WZRC and AM 1380 WKDM). Studios & offices for that cluster are at #449 Broadway in Manhattan -- in the SoHo neighborhood (actually near the border between Tribeca district and Soho district).

Wanted to buy:

The "Radio Crazy" is baaaaaaakkkk! I am still looking
for a "Dog" AM for sale cheap.

I will pay a finder's fee to anyone leading me to an

AM station or stations that I actually buy.

I don't care is station is losing money or is "dark"
as long as the FCC license is intact and they are not
facing eviction of their tower site. I will accept
pending eviction of their studio site. Transmitter and
tower site MUST be secure. What I mean by secure is no
pending eviction or lease about to run out.

Ideal station will be seller financed with little or
no money down.

No "pure" daytimers. Station must be authorized to run
at least 50 watts at midnight local.

No directionals exceeding three (3) towers.

Any market considered.

DO NOT MENTION station call letters or city of license
in your first email or telephone call. This is for
your protection.

Tel: (478)741-1710 in Macon, GA. If I am online you
will be routed into my email. My telephone may block
callers that mask their caller ID. If you call and do
NOT leave a message, I will NOT return your call. Even
the "Radio Crazy" does not like to play games! LOL!

73,

Meyer Gottesman, W6GIV
aka "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman

Very odd for WETA-FM to not match delay, since I'd guess they do very little
combo operation.  A lot of their schedule is from NPR (or originated for
NPR).  They used to have a first-rate chief engineer.  He went to XM, IIRC.
RDS went away when he did.  I don't know anything about their current chief.

Well- for instance: The adverse health effects of secondhand cigarette smoke have been well-documented. (Anyone who wishes take the position that there is no statistical link between breathing 2nd hand cigarette smoke and adverse health effects should take their data to the American Lung Association and argue the point with them. Maybe the ALA will consider ceasing their national ad campaign pointing out those dangers)

Anyway- A national talk show host who continually tells his listeners that "Secondhand smoke is not a health hazard!"- in my view and the view of experts, is dispensing FALSE medical "information". Similarly, if the same talk show host continually tells his listeners that "Styrofoam is bio-degradable!"- he is dispensing false chemical information regarding polystyrene foam.

It seems to me that there ought to reach a point where there is such a preponderance of false medical and product claims- such an OVERWHELMING APPEARANCE OF IMPROPRIETY- that we ought to start asking the question, for instance: "Is this host being paid by A cigarette company (companies) to promote their product by lying about its health effects? Does anyone have the guts to say,"It appears the King Has No Clothes!" You certainly won't find anyone in the talk show business who will bring this matter to his listeners' attention.

Styrofoam has been under attack by the public (because it litters our landscape and the polystyrene industry has done little to promote recycling)- many have proposed legislation to limit its use or require the industry to recyle all its product: Is this host being paid by the styrofoam industry to lie about its "bio-degradability"- thus to promote the throw-a-way styrofoam packaging industry by getting the public (and possible legislation)off its back?!

How about "Dioxin is not a health hazard!" What industry is paying this host to spread environmental lies in an effort to encourage the public to sabotage health studies on dioxins, clean-up efforts, etc?

If this talk show host is not being paid directly- under the table payments for spreading these false claims- is he receiving advertising contracts from subsidiary companies- who "appreciate his efforts" on their behalf.

I am not going to name the talk show host that these specific statements involve. This isn't limited to one host! You are all free to hazard a guess. I will tell you that I have these and much more on audiotape. The FCC knows all about this but refuses to act. The head of the FCC investigation division, Norman Goldstein, told me on the phone: "It appears that the host in question may be violating the law, but we do not have the resources to investigate this matter!"

I will tell you that this FCC officer agreed that there is an appearance of impropriety- but when I asked his if "resources" meant the FUNDS to investigate or that his office just lacked the WILL to investigate- he told me that he "did not want to discuss this any further".

The fact is: when a talk show host lies- he or she is making an attempt to inflame passions. He or she is attempting to gather listeners by inflaming sensibilities. He or she knows that when a lie is told, his listeners tell their friends, "Did you hear what talk show host X said yesterday on his show? He said (blah, blah blah)" The friend replies, "Really, I can't believe anyone would say that! I'm going to start listening to his show and see if he really knows what he is talking about!"

Right there is the dirty little secret talk show mechanism. You gather more listeners and ad contracts - in other words you SELL your talk show through THE LIE. There is no difference between selling your talk show by lying- than an advertiser selling his manufactured product by lying about its attributes. The first is a violation of FCC law just as the second is a violation of FTC law.

Don't anyone tell us that there are not current and former employees who are witnesses to statements in the inner offices of talk show execs and hosts-showing this fraudulent INTENT to gain listenership- and that they would have someting to contribute to an FCC investigation into this matter.

The there is no difference between yelling "FIRE" in an auditorium when there is no such fire and broadcasting on a radio station: "Folks- from my studio I see there is a fire at the downtown auditorium!" (also when there is no such fire)

Also- there is no difference between falsely broadcasting the auditorium fire and knowingly broadcasting false medical "information" which also has the potential to maim and/or kill. Even if it can not be proven that the host's intent is to kill or maim-Certainly a talk show host's REFUSAL TO CORRECT his false medical information lends to an appearance of impropriety (knowingly disregarding the health of his listeners- in the interest of promoting his radio show) This intent needs to be investigated. This is NOT a FREE SPEECH issue!

I think you're right, but I suspect the writer was saying that WPEN's main lobe is effectively 200kW. Sounds a bit high to me, though....this would mean, what, 16dB over isotropic? Nah, that's not right. Here's WPHT's coverage
(http://www.radio-locator.com/cgi-bin/pat?call=WPHT&service=AM&status=L&hours=U)
and
here's WPEN's nighttime coverage

```
(http://www.radio-locator.com/cgi-bin/pat?call=WPEN&service=AM&status=L&hours=N).
WPEN's got a nice lobe over Philadelphia and points east, but it still doesn't
match
WPHT's 50kW-U coverage.

>blackout in New York City they could switch over the broadcast to the
>backup in Clifton? (Am I wrong about this?).

I was a summer replacement engineer in 1964 (between my first and second years in college). At the time, programming originated from the Clifton site except for the morning show, which was done in Manhattan and brought to Clifton via equalized phone line.

The programming came from Ampex 351 decks, operated by the talent. To keep the IBEW union happy, the outputs of the tape decks were mixed to mic level and this sum was then brought into one input of a Gates console operated by the engineer, who also operated the switch that keyed the talent on-air.

The AM transmitter operated from the Clifton site (as now), with the TX (a huge, ancient Federal 5 KW rig that had a separate vault for the power supply and modulation transformer) being in the same room as said Gates console. There was a Gates backup AM TX as well.

The FM ordinarily ran from the Empire State Building, but there was an FM backup transmitter in Clifton, with the antenna mounted on one of the AM towers.

In 1964, WPAT's business offices were already in Manhattan.

As an amusing aside, one of the essential engineering tools was a broom handle. Held by the engineer, who balanced it on the console meter bridge he used it to push the button that switched the DA from day to night pattern while he stood by the Federal and hit the breaker that turned the plates on and off.

Processing of the AM was via an old GE RF-mode limiter -- the audio was modulated to RF, gain-controlled, and then demodulated. This prevented thumps, which were typical of the vacuum tube technology of the time. During that summer, the station added a vacuum tube Audimax I to the chain ahead of the limiter.

Documentation, please--and don't just copy from NewsMax.

The President is generally always referred to in the first reference as "President ---" and in the second reference as "Mr. ---."  That's basic AP Stylebook.

I did a search on npr.org and found 3,518 pages that have on them "President Bush."  Granted, some of them may refer to George H.W. Bush and are likely not transcripts of stories that are audio hyperlinked, but it seems to me that NPR is following basic stylebook on references to the President.

And at NPR, as at many other journalistic organizations, the President is always heard last in a story, no matter what party he belongs to. That's also pretty much Journalism 101.

> NPR is the primary propaganda organ for the Liberal Media ELITE [.]

Then why are the extreme left-wing nutsos at FAIR continually
attacking NPR for right-wing bias?  Why does Amy Goodman of Pacifica
refer to NPR as part of "corporate media?"  Why did I hear a bunch of
hardcore lefties at a forum I once attended *boo* a mention of NPR?

As far as I'm concerned, if the extremist wackos on both sides hate
NPR, they must be doing something right.

I computed the 200 kW based on the 50 kW RMS field.... clearly not
applicable to the 5 kW power level.

(Snip, snip, snip).

The FCC has no rules (the only "law" the FCC has is called "administrative law" unless I am sorely mistaken) against this. The FCC basically has rules about technical operation, and the programming "rules" concern indecency, station IDs, etc. There is just about nothing on content other than indecency. Other government agencies, ranging from local to Federal, have jurisdiction on the areas you are mentioning, but not the FCC.

And a lot of what you mention is what, in English, we call "opinion." If a talk host wants to state he or she does not believe in the "trumped up figures about second hand smoke" they are well within their constitutionally _protected_ rights to disagree. Many people disagree with creationism or evolutionism, despite either Biblical or scientific "proof" and such disagreement is protected.

I can go on the air and state my belief that the Earth is flat, and that it is only our societal perception that it is round that makes it so. It's, in this case, my opinion.

You are basically chasing windmills. And they are the windmills you constructed based on your belief system. Fortunately, we live in a free society, and we don't have to agree with you.

No, only music. And only a muffled dial-up quality stream, no
broadband stream.

Most Sirius talk channels are actually rebroadcasts of AM/FM/TV
channels tho. So just go to the actual channel website and see if you
can listen free. For syndicated shows, visit one of the AM/FM
affiliate websites that stream.

But the point he's making is that these hosts *may be* (and I stress that I'm only
repeating his allegation) on the payroll for the firms being represented
positively
(or said firm's competitors unfavorably). And that's still covered under payola
prohibitions, which last I looked, is still on the books (even though Clear
Channel
et.al. have figured out a way around that one).

The FCC basically has rules about technical operation, and the programming "rules" concern indecency, station IDs, etc. There is just about nothing on content other than indecency. Other government agencies, ranging from local to Federal, have jurisdiction on the areas you are mentioning, but not the FCC.
>
> And a lot of what you mention is what, in English, we call "opinion." If a talk host wants to state he or she does not believe in the "trumped up figures about second hand smoke" they are well within their constitutionally _protected_ rights to disagree. Many people disagree with creationism or evolutionism, despite either Biblical or scientific "proof" and such disagreement is protected.
>
> I can go on the air and state my belief that the Earth is flat, and that it is only our societal perception that it is round that makes it so. It's, in this case, my opinion.

> You are basically chasing windmills. And they are the windmills you constructed based on your belief system. Fortunately, we live in a free society, and we don't have to agree with you.

If you were to broadcast that the "earth is flat" and were so persuasive as to use the argument to sell products in an under-developed country- I'de say you were a crook- and ought to be prosecuted. Of course- it appears you will stand by your "argument" that the statement is your legal opinion. Give me a break. What I am saying has noting to do with the opinions of an idiot.

I highly doubt that "styrofoam is bio-degradable" passes a personal opinion. It may be the personal opinion of an idiot. However- the talk show host I am quoting appears not to be an idiot. In fact- millions of people who have heard him believe that he is not an idiot! His numerous lies concerning consumer products tend to indicate that something else is at work. That something else is the distinct possibility that he is lining his bank account by promoting consumer products by lying about them. I'm not sure why you would dismiss a pattern of intententional medical, chemical,consumer product.. LIES- as personal opinion. Most people who witness continuous lies- label the person a pathological liar or a liar who appears to have something to hide. I wonder if talk show hosts are just something special in your mind and simply just ought to be left alone and always given the benefit of the doubt.-i.e. EVERYTHING they say, is by definintion- an opinion! Give me a break!

"The FCC has no rules (the only "law" the FCC has is called

 You are certainly wrong on that point. Falsification of the news by
intent is illegal. It says so on the FCC website. It says that "when
the FCC receives extrinsic information from witness(es) that
INTENTIONAL falsification of news events or product promotion occurs
for any reason (i.e. personal gain, subjective views, etc)- THE FCC
WILL TAKE ACTION !"

  I have highlighted the WILL TAKE ACTION- because that is in their
literature.

 I will go to their website and post it here in the next few days.

One of the reasons why the live streams aren't duplicated is because, as you say,
they're usually available on the show's or the service's website.

But I beg to differ on the music streams.  They sound every bit as good as a
reasonably-fast MP3 stream.  Not that I think that's all that good, but if you're
happy with MP3 or a 32kbps RealPlayer stream, it's okay.  And beats shuffling CDs.

Just another troll with a bad memory.  NPR, and many other news organisations,
will
use all three forms just to avoid being repetitive.  Regardless of the person or
party holding the office.  Same goes for Representatives and Senators.
Shheeessshhh!

Could we PLEASE refrain from keeping these useless, wasteful and off-topic threads
(although this one is less so than most of the crap that's been droning on-and-on
for
the last two weeks) from bloating this newsgroup?  I, and I'm sure quite a bunch
more, would appreciate it!  By now you should know who is and who is not worth
engaging.  Use that knowledge to do the best thing, which is to just ignore them.
Or
put them in your kill file.  They can't talk to themselves (although there may be
a
few who don't quite meet that criteria, either)!

> And a lot of what you mention is what, in English, we call "opinion."

"Mr Fact" seems to have a problem understanding the difference between an opinion and a fact. Also seems he's never heard of the 1st amendment. Sounds like he thinks government should protect the stupid. Freedom comes with a price, and that includes being responsible for decisions we make, including decisions on what to believe.

>What does "cut a tape" mean, and why and where does that come from?

It means "record" a tape. I suspect the origin is from the days before magnetic recording, when recordings were made mechanically on discs, literally "cut" into the disc by a stylus.

To this day many people refer to the tracks on a CD as "cuts." Old linguistic habits die hard.

news:cbvl2j$nce$1@xuxa.iecc.com...

> If you were to broadcast that the "earth is flat" and were so persuasive as to use the argument to sell products in an under-developed country- I'de say you were a crook- and ought to be prosecuted. Of course- it appears you will stand by your "argument" that the statement is your legal opinion. Give me a break. What I am saying has noting to do with the opinions of an idiot.

We are not talking about an underdeveloped country. Please don't build a straw man here.

We are talking about regulation of what might be broadcast on the radio in the US. The FCC has no jurisdiction outside the US, and you specifically addressed violations of "FCC laws (sic)" in your post.

The fact remains that the FCC has no jurisdiction over any of this.

>From the FCC:
The FCC and Freedom of Speech. The First Amendment and federal law generally prohibit us from censoring broadcast material and from interfering with freedom of expression in broadcasting. Individual radio and TV stations are responsible for selecting everything they broadcast and for determining how they can best serve their communities. Stations are responsible for choosing their entertainment programming, as well as their programs concerning local issues, news, public affairs, religion, sports events, and other subjects. They also decide how their programs (including call-in shows) will be conducted and whether to edit or reschedule material for broadcasting. We do not substitute our judgment for that of the station, and we do not advise stations on artistic standards, format, grammar, or the quality of their programming. This also applies to a station's commercials, with the exception of commercials for political candidates during an election (which we discuss later in this manual).

As Bob mentioned, there is the possibility that someone is receiving, unknown to station management, compensation for expressing certain views. This is the crime of plugola, which has to do with violating sponsorship ID rules, not the content of the message.

However, a point of view, whatever it is, is allowed. If a "Flatworldite" wants to do a show, and someone puts he/she/it on, they can rant all they want. Their rant is protected.

If the position or a paid ad breaks a law, it is not the FCC's jurisdiction. Other entities are responsible.

> I highly doubt that "styrofoam is bio-degradable" passes a personal opinion. It may be the personal opinion of an idiot. However- the talk show host I am quoting appears not to be an idiot.

This statement is just stupid. If I had a dollar for everything stupid I have heard and read, I would have retired. There is no law against stupidity, or a substantial portion of the population would be in jail, be ex-convicts or stand awaiting trial, including myself.

> In fact- millions
> of people who have heard him believe that he is not an idiot!

So? Again, "stupid" is not a crime.

> His
> numerous lies concerning consumer products tend to indicate that
> something else is at work.

How do you know he is lying? He may just be ill-informed as well as stupid.

As far as I know, there is no styrofoam lobby trying to soborn talk hosts into lying about coffee cups.

> That something else is the distinct
> possibility that he is lining his bank account by promoting consumer
> products by lying about them.

If this is true, and the station does not know about the compensation, there is a violation of plugola rules. If the statements were purposely and maliciously made despite contrary knowledge of fact, then there is a truth in advertising related issue. The FCC does not deal with the latter.

>From the Commission:
False or Misleading Advertising. The Federal Trade Commission has primary responsibility for determining whether an advertisement is false or deceptive and for taking action against the sponsor. Also, the Food and Drug Administration has primary responsibility for the safety of food and drug products. You should contact these agencies regarding advertisements that you believe may be false or misleading.

> I'm not sure why you would dismiss a
> pattern of intentional medical, chemical,consumer product.. LIES-
> as personal opinion.

Because in the USA, there is a presumption of innocence. If there is illegal activity, then the appropriate authorities should intervene. Otherwise, listeners will discover the show is full of inacuracies, and not listen.

> Most people who witness  continuous lies- label

Again, I ask: what FCC "law" was broken?
>

> "The FCC has no rules (the only "law" the FCC has is called
> "administrative
>> law" unless I am sorely mistaken) against this. The FCC basically has
>> rules
>> about technical operation, and the programming "rules" concern indecency,
>> station IDs, etc. There is just about nothing on content other than
>> indecency. Other government agencies, ranging from local to Federal, have
>> jurisdiction on the areas you are mentioning, but not the FCC."
>
> You are certainly wrong on that point. Falsification of the news by
> intent is illegal.

>From "The Public and Broadcasting"
Broadcast Journalism. Under the First Amendment and the Communications Act, the FCC cannot tell stations how to select material for news programs, and we cannot prohibit the broadcasting of an opinion on any subject. We also do not review anyone's qualifications to gather, edit, announce, or comment on the news; these decisions are the station's responsibility.

Criticism, Ridicule, and Humor Concerning Individuals, Groups, and Institutions. The First Amendment's guarantee of freedom of speech protects programming that stereotypes or otherwise offends people with regard to their religion, race, national background, gender, or other characteristics. It also protects broadcasts that criticize or ridicule established customs and institutions, including the government and its officials. If there is to be genuine free speech, people must be free to say things that the majority may abhor, not only things that the majority finds tolerable or congenial.

The FCC prohibits haoxes. It does not regulate news reliability.

> It says so on the FCC website. It says that "when
> the FCC receives extrinsic information from witness(es) that
> INTENTIONAL falsification of news events or product promotion occurs
> for any reason (i.e. personal gain, subjective views, etc)- THE FCC
> WILL TAKE ACTION !"

Please cite, especially about product promotion. The FCC actually states that false advertising is NOT their domain.
>
>  I have highlighted the WILL TAKE ACTION- because that is in their
> literature.

I doubt it.
>
> I will go to their website and post it here in the next few days.

Please do. And post links, preferably in this dimension, not the parallel one you are living in.

> attacking NPR for right-wing bias?

MJ,

Because to use your words they are "extreme left-wing nutsos at FAIR"

NPR may be Left-Wing and Liberal but it is not Extreme [.]
.
.
> Why does Amy Goodman of Pacifica refer to NPR
> as part of "corporate media?"

You feel that NewsMax is not creditable but then cite Pacifica ?
.
.
> Why did I hear a bunch of hardcore lefties at

1. To record a tape.  Probably a follow-on to the notion of cutting an
   acetate, where the disc would physically be cut.

2. To edit tape.

If Jesse Helms can get up in front of the whole world on C-SPAN and tell
them that tobacco prevents lung disease because it fills the lungs with
carbon monoxide that kills bacteria, I don't see why anyone should be
punished for making far lesser statements on mere AM daytimers.

I was going through your recent posts when I came across this one on
this different NG (which i've actually been to before)..what's IBOC?:)

BTW just finsihed hearing the Three Dog Night promo from the 60s show
website that you posted over in rec.music(the 70s ng)!Excellent!

Perhaps also at least in part a reference to the days when one literally
cut (and spliced) tape as part of the recording/production process.

(To think we now have a generation of radio folks who have never had
to splice tape...)
